The Sentinel

***Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development***

Period ending 18 January 2020 :: Number 302

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is a service of the [GE2P2 Global Foundation](http://ge2p2-center.net/), which is solely responsible for its content. Comments and suggestions should be directed to:

*David R. Curry

Conflict – “Catastrophic War”

Majority of millennials see catastrophic war as real possibility, and believe there should be limits

International Committee of the Red Cross survey asked 16,000 millennials in 16 countries their views on war.

16-01-2020 | *News release*

Geneva (ICRC) – Millennials see catastrophic war as a real likelihood in their lifetime. In fact, most millennials surveyed by the International Committee of the Red Cross (ICRC) believe it is more likely than not that a nuclear attack will occur in the next decade.

A survey of more than 16,000 millennials in 16 countries and territories last year – roughly half in peace, half experiencing conflict – commissioned by the ICRC explored millennials' views on conflict, the future of warfare and the values underpinning international humanitarian law, such as the use of torture against enemy combatants.

The results indicate that millennials are nervous about the future, and heightened tensions globally are likely to deepen these fears.

A plurality of respondents, 47 percent, think it's more likely than not that there will be a third world war in their lifetime. And although 84 percent believe the use of nuclear weapons is never acceptable, 54 percent believe it is more likely than not that a nuclear attack will occur in the next decade.

"This millennial foreboding may reflect an increase in polarization and dehumanizing rhetoric," said ICRC President Peter Maurer. "If millennials are right about a third world war, the suffering of countries and regions will be immense. It's a reminder of how critical it is that the laws of war that protect humanity are followed now and in the future."

Encouragingly, 74 percent of millennials also believe that wars are avoidable, and nearly the same number (75 percent) think that limits must be imposed on how wars are fought.

However, the survey reveals worrying trends that point to a lack of respect for the basic human values enshrined in international law: 37 percent believe torture is acceptable under some circumstances – even after the UN convention banning torture is explained to them; and 15 percent believe that commanders should do whatever it takes to win, regardless of the civilian casualties generate...

Syria

"They have erased the dreams of my children": children's rights in the Syrian Arab Republic

"They have erased the dreams of my children": UN Commission of Inquiry on Syria Publishes Report on Children's Rights over the course of the Syrian War

United Nations Human Rights Council

GENEVA, 16 January 2020 – Children in the Syrian Arab Republic have been robbed of their childhood as they are forced to participate in a brutal war and endure numerous violations of their rights by all parties to the conflict while remaining acutely vulnerable to violence and abuse, the Commission of Inquiry for Syria noted today in its latest report.

In a [25-page report](#) released today, entitled "They have erased the dreams of my children," the three-person Commission outlines the multiple rights violations children have been subjected to – including over five million children displaced internally and abroad – and how boys and girls have been robbed of their childhood over the course of the brutal eight and a half-year war.

"I am appalled by the flagrant disregard for the laws of war and the Convention on the Rights of the Child by all parties involved in the conflict", said Commission of Inquiry Chair Paulo Pinheiro. "While the Government of the Syrian Arab Republic has the primary responsibility for the protection of boys and girls in the country, all of the actors in this conflict must do more to protect children and preserve the country's future generation," he noted.

Children have been killed and maimed, and subjected to myriad violations by warring parties, states the report, which covers the period between September 2011 to the end of October 2019. On multiple occasions, pro-Government forces used cluster munitions, thermobaric bombs and chemical weapons causing scores of child casualties. Rape and sexual violence have been used repeatedly against men, women, boys and girls as a tool to punish, humiliate and instil fear among communities. Government forces have detained boys as young as 12, subjecting them to severe beatings and torture.

The devastating situation of education in Syria is particularly highlighted as an area of concern. Since the start of the conflict thousands of schools have been destroyed or used for military purposes and more than 2.1 million boys and girls are not regularly attending classes of any form. "Urgent efforts are required by the Syrian Government to support as many children as possible to return to education," noted Commissioner Karen AbuZayd. "Armed groups holding territory also need to act with haste to facilitate access to education," she added.

Armed groups targeted schools and used educational facilities for military purposes. Children were detained and used as bargaining chips for prisoner swaps or to extract ransom. Hay'at Tahrir al-Sham (HTS) terrorists recruited and used boys to fight on the frontlines. At its peak, the Islamic State in Iraq and the Levant (ISIL) subjected girls as young as nine to rape and sexual slavery. Boys, meanwhile, were given military training and routinely exposed to extreme violence, including witnessing public executions or forced into the role of executor.

The impact of the conflict on the long-term physical and mental health of boys and girls has been severe. Today, large numbers of children suffer from disabilities as well as devastating psychological

and development issues. The report also outlines how over five million children have been displaced by conflict and have become increasingly vulnerable to violations.

The Commission urges States to ensure the protection of displaced children, particularly with regard to the obligations upon all States to repatriate children with familial links to ISIL fighters. "States have well defined obligations to protect children, including from statelessness. Failing to abide by such fundamental principles would be a clear derogation of duty," noted Commissioner Hanny Megally...

Development – Global Economy

World Economic Situation and Prospects 2020

Energy transition and the global economy

UN DESA 16 January 2020

The global economy has suffered a significant slowdown amid prolonged trade disputes and wide-ranging policy uncertainties. While a slight uptick in economic activity is forecast for 2020, the World Economic Situation and Prospects 2020 warns that economic risks remain strongly tilted to the downside, aggravated by deepening political polarization and increasing scepticism over the benefits of multilateralism. These risks could inflict severe and long-lasting damage on development prospects. They also threaten to encourage a further rise in inward-looking policies, at a point when global cooperation is paramount.

Compounding the economic slowdown, rising global temperatures and the increasing frequency and intensity of weather-related shocks press home the urgent need for a dramatic shift in the global energy mix. The World Economic Situation and Prospects 2020 explores the global economic implications of this energy transition. The transition to a cleaner energy mix will bring not only environmental and health benefits, but economic opportunities for many. However, without appropriate policy strategies, the costs and benefits will be unevenly distributed within and between countries.

"To live in shared prosperity within the capacity of our planet to support us, we must move away from carbon and resource-intensive industries, materials and value chains. We must instead prioritize sustainable consumption and production—a way of life that enables economic growth, while ensuring planetary protection." - António Guterres, Secretary-General of the United Nations

Development – Women's Empowerment

40 Economies Make 62 Legal Reforms to Advance Women's Economic Participation

World Bank

WASHINGTON, January 14, 2020 — The regulatory environment for women's economic participation has improved over the past two years, with 40 economies enacting 62 reforms that will help women – half the world's population – realize their potential and contribute to economic growth and

development, says a new World Bank study. Still, the results are uneven — women in many countries have only a fraction of the legal rights of men, holding back their economic and social development. The study, [Women, Business and the Law 2020](#), measures 190 economies, tracking how laws affect women at different stages in their working lives and focusing on those laws applicable in the main business city. It covers reforms in eight areas that are associated with women's economic empowerment, conducted from June 2017 to September 2019.

"Legal rights for women are both the right thing to do and good from an economic perspective. When women can move more freely, work outside the home and manage assets, they are more likely to join the workforce and help strengthen their country's economies," said World Bank Group President David Malpass. "We stand ready to help until every woman can move through her life without facing legal barriers to her success."

The areas of Workplace and Marriage saw many reforms, especially in the enactment of laws that protect women from violence. In the last two years, eight economies enacted legislation on domestic violence for the first time. Seven economies now have new legal protections against sexual harassment in employment.

Twelve economies improved their laws in the area of Pay, removing restrictions on the industries, jobs and hours that women can work. Globally, the most frequent reforms were in areas related to Parenthood, with 16 economies enacting positive changes. Reforms included expansion of the amount of paid maternity leave available to mothers, introduction of paid paternity leave and prohibition of dismissal of pregnant employees.

Achieving legal gender equality requires strong political will and a concerted effort by governments, civil society, and international organizations, among others. But legal and regulatory reforms can serve as an important catalyst to improve the lives of women as well as their families and communities. "This study helps us understand where laws facilitate or hinder women's economic participation. It has incentivized countries to undertake reforms that can eliminate gender imbalances," said World Bank Group Chief Economist Pinelopi Koujianou Goldberg. "Achieving equality will take time, but it is encouraging that all regions have improved. We hope that this research will continue to serve as an important tool to inform policy making and level the playing field for women."

The WBL index measures only formal laws and the regulations which govern a woman's ability to work or own businesses— a country's actual norms and practices are not captured. The global average score was 75.2, which improved slightly from 73.9 two years ago. Clearly, much more work remains as women in many countries have only a fraction of the legal rights of men, holding them back from opportunities for employment and entrepreneurship...

Health

[Lack of new antibiotics threatens global efforts to contain drug-resistant infections](#)

17 January 2020 *WHO News release*

Declining private investment and lack of innovation in the development of new antibiotics are undermining efforts to combat drug-resistant infections, says the World Health Organization (WHO).

Two new reports reveal a weak pipeline for antibiotic agents. The 60 products in development (50 antibiotics and 10 biologics) bring little benefit over existing treatments and very few target the most critical resistant bacteria (Gram-negative bacteria).

While pre-clinical candidates (those in early-stage testing) are more innovative, it will take years before they reach patients.

"Never has the threat of antimicrobial resistance been more immediate and the need for solutions more urgent," says Dr Tedros Adhanom Ghebreyesus, Director-General of WHO. "Numerous initiatives are underway to reduce resistance, but we also need countries and the pharmaceutical industry to step up and contribute with sustainable funding and innovative new medicines."

The reports ([Antibacterial agents in clinical development – an analysis of the antibacterial clinical development pipeline](#) and its companion publication, [Antibacterial agents in preclinical development](#)) also found that research and development for antibiotics is primarily driven by small- or medium-sized enterprises with large pharmaceutical companies continuing to exit the field...

Emergencies

Ebola – DRC+

Public Health Emergency of International Concern (PHEIC)

Ebola Outbreak in DRC 75: 14 January 2020

Situation Update

From 6 to 12 January 2020, eight new confirmed cases of Ebola virus disease (EVD) were reported from Mabalako, Beni, and Musienene Health Zones in North Kivu Province in the Democratic Republic of the Congo. Of these cases, three were reported in Beni Health Zone, where no cases had been reported for 29 days, and one was reported in Musienene Health Zone, where no cases had been reported for 132 days. These four cases are linked to the transmission chain that originated in Aloya Health Area, Mabalako Health Zone, and were not unexpected given known links between Mabalako and Beni...

...Vaccines

:: From 8 August 2018 to 12 January 2020, 265 309 people were vaccinated with the rVSV-ZEBOV-GP Ebola vaccine.

:: Vaccination with the Ad26.ZEBOV/MVA-BN-Filo vaccine continued in Karisimbi Health Zone, with 5684 people vaccinated since its introduction on 14 November 2019.

...Risk communication, social mobilization and community engagement

:: Traditional healers and managers of private structures which had contact with suspected EVD cases participated in response activities after community dialogue in Aloya, Mabalako Health Zone.

:: A forum for popular expression was also organized with village chiefs and civil society leaders to address questions related to vaccination activities in Métal and Aloya Health Zones.

:: Teams continue to involve local actors in communication and vaccination activities in Lwemba and Biakato.

.....

DR Congo: Red Cross volunteers attacked during Ebola burial

Goma/Nairobi/Geneva, 15 January 2020 – Two volunteers from the Democratic Republic of Congo (DR Congo) Red Cross were seriously injured following an attack during a safe and dignified burial of a suspected Ebola case near Mambasa, in eastern DR Congo on Monday, 13 January. The volunteers are now in hospital, receiving medical care and psychosocial support.

Press release

First drone and data academy opens in Africa to improve service delivery for children

NEW YORK/ LILONGWE, 13 January 2020 – The first African Drone and Data Academy (ADDA) opened today in Lilongwe, Malawi, UNICEF announced.

The move is part of efforts to promote the use of drones in programmes and services that will impact the lives of children and young people.

"Humanitarian and development programme delivery in Africa and beyond can benefit significantly from the application of drone technology," said UNICEF Executive Director Henrietta Fore. "The African Drone and Data Academy will be instrumental in equipping young people with the skills they need to use the technology to benefit children and their communities."

Building on the work of Africa's first humanitarian corridor launched in Malawi in 2017, the academy will develop expertise in the use of drones for humanitarian, development and commercial purposes across the continent through a 12-week course. It plans to train approximately 150 students to build and pilot drones by 2021. Funding from UNICEF's partners will provide free tuition to the first cohort of 26 students from across Africa...

New UNIDO publication on Quality Infrastructure and the SDGs

14 January 2020 – If companies want to access and compete in new markets, they have to demonstrate the quality and safety of their goods and services and comply with international standards in the target markets. Quality Infrastructure is a system offering a complete package covering essential aspects such as policy, institutions, service providers, and the value-adding use of international standards and conformity assessment procedures.

Statement by U.S. Agency for International Development (USAID) Administrator Mark Green on National Religious Freedom Day

January 16, 2020

This National Religious Freedom Day, we take the opportunity to celebrate America's first freedom. A desire for religious freedom is what brought Americans to Plymouth's shores, which makes it a foundational value in the United States' Journey to Self-Reliance. One expression of religious freedom in the United States is the legacy of faith-based organizations and their enduring contributions to stability, peace, and prosperity here at home and around the world.

USAID Administrator Green's Meeting With Mark Lowcock, United Nations Under-Secretary-General For Humanitarian Affairs And Emergency Relief Coordinator

January 15, 2020

Readout

On January 13, 2020, U.S. Agency for International Development (USAID) Administrator Mark Green met with the United Nations (UN) Under-Secretary-General for Humanitarian Affairs and Emergency Relief Coordinator, Mark Lowcock, who directs the UN Office for the Coordination of Humanitarian Affairs (OCHA). The two officials discussed some of the world's most-pressing man-made crises, including Yemen, Venezuela, South Sudan, and Syria. Administrator Green expressed USAID's continued commitment to provide life-saving humanitarian assistance to vulnerable populations around the world.

WCO supports the Pau Declaration by G5 Sahel countries' Heads of State and the French President

On 13 January 2020, the Pau Summit of the G5 Sahel member countries' Heads of State and the French president Macron took place in the south of France. The objective of the Summit was to discuss the security situation in the Sahel-Sahara Strip that has been deteriorating throughout the past years. The Summit resulted in the adoption of the Joint Declaration of the Heads of State that defined the new framework, "the Coalition for the Sahel" bringing together France, other involved countries and organizations. The framework will contain four pillars covering the areas of I) the fight against terrorism, II) strengthening the military capacities of the states in the region, III) support for the return of state and administrations on the territory and iv) development assistance. In particular, Pillar III on support for the return of state and administrations on the territory includes the "training and deployment of staff, including at local level, in the areas of civil administration, internal security (police, gendarmerie, customs) and justice"...

Director's blog: Ring out the old, Ring in the new

by Tanya Cox | Jan 16, 2020

Welcome back! A new year ... a new decade... And of course New Year's resolutions – because, unlike many of my (perhaps more realistic) colleagues, I did make a couple this year. Better work-life balance, more sport (ask me in February if I'm still climbing the stairs to our fourth floor office!), the usual kind of thing. But making resolutions require only words. Results require action.

[The Puzzle of Financial Inclusion in Mexico: A Closeable Gap?](#)

Financial inclusion is a fundamental pillar of development. But Mexico poses a conundrum. In many respects it has been successful at growing its economy and integrating with global markets. Yet among its peers in Latin America, Mexico is the worst-performing at financial inclusion relative to its income; at 36.9%, its rate of inclusion only surpasses three other countries regionally—all with much lower per capita incomes.

State Income Tax Expenditures

In this brief, we consider both personal and business income tax expenditures at the state level. We use California, Massachusetts, Minnesota, and the District of Columbia as examples. We separate tax expenditures into those that occur because of conformity with federal tax provisions and those that result from state-specific tax policies. We find that the former category accounts for between 70 and 85 percent of the total cost

The Latest
In the Year of Women's Rights Anniversaries, Now is the Time to Make Foreign Policy Feminist

Lyric Thompson Director of Policy and Advocacy, International Center for Research on Women
Sundaa Bridgett-Jones Director, Policy, The Rockefeller Foundation
January 16, 2020

Mexico became the latest country to launch a distinctly “feminist” foreign policy, an approach to foreign relations aimed at advancing gender equality, promoting peace and combatting the most egregious challenges of our day: climate change, gender-based violence, migration. This approach is new and bold—with only five countries that have announced feminist foreign policies—but we believe it holds considerable promise as a tool to organize and catalyze action on the most important issues of the day.

It's a watershed year for actions like this. 2020 is a year of anniversaries, including the fast approaching 25th anniversary of the Beijing Declaration and Platform for Action, the result of the Fourth World Conference on Women, wherein world leaders and thousands of women's rights activists gathered to debate and ultimately enshrine women's rights as human rights in international law. This marked a fundamental shift from the rights of women being treated as a niche issue to a broader recognition of those rights as fundamental to the overall success of society...

[Do patients and research subjects have a right to receive their genomic raw data? An ethical and legal analysis](#)

As Next Generation Sequencing technologies are increasingly implemented in biomedical research and (translational) care, the number of study participants and patients who ask for release of their genomic raw data is set to increase. This raises the question whether research participants and patients have a legal and moral right to receive their genomic raw data and, if so, how this right should be implemented into practice.

Humanitarian Exchange Magazine

Number 75, May 2019

<https://odihpn.org/magazine/making-humanitarian-action-work-for-women-and-girls/>

Special Feature: Making humanitarian action work for women and girls

by HPN May 2019

The theme of this edition of Humanitarian Exchange, co-edited with Women Deliver, is making humanitarian action work for women and girls. Despite gains, including commitments made at the World Humanitarian Summit, there is still much to be done to address the gendered impacts of humanitarian crises and improve gender-sensitive humanitarian action.

In the lead article, [Jacqueline Paul](#) advocates for feminist humanitarian action based on evidence that improvements in women's socio-economic status can reduce excess mortality among women after shocks. [Jean Kemitare](#), [Juliet Were](#) and [Jennate Eoomkham](#) look at the role of local women's rights organisations in preventing and responding to violence against women and girls, and [Marcy Hersh](#) and [Diana Abou Abbas](#) highlight opportunities for more concrete action on sexual and reproductive health in emergencies.

Citing experience from Vanuatu, [Jane Newnham](#) explains how women will choose to use contraceptives even during a humanitarian response, when services and counselling are delivered in an appropriate and responsive way. Drawing on experience in Bangladesh, [Tamara Fetters](#) and [colleagues](#) challenge the belief that abortion is a non-essential service, or too complicated for humanitarian actors to provide. [Darcy Ataman](#), [Shannon Johnson](#), [Justin Cikuru](#) and [Jaime Cundy](#) reflect on an innovative programme using music therapy to help survivors of trauma.

[Emilie Rees Smith](#), [Emma Symonds](#) and [Lauryn Oates](#) highlight lessons from the STAGE education programme in Afghanistan, and [Degan Ali](#) and [Dega Saleh](#) outline how African Development Solutions is helping women and girls take on leadership and decision-making roles in Somalia. [Fiona Samuels](#) and [Taveeshi Gupta](#) explore patterns of suicide among young people in Vietnam, with a particular focus on

girls, and Subhashni Raj, Brigitte Laboukly and Shantony Moli illustrate the importance of a gendered approach to community-based disaster risk reduction in the South-West Pacific. Nicola Jones, Workneh Yadete and Kate Pincock draw on research in Ethiopia to explore the gender- and age-specific vulnerabilities of adolescents. The edition ends with an article by Julie Rialet-Cislaghi on how humanitarian responses can better address child marriage.

Special Communication

[FDA Approval and Regulation of Pharmaceuticals, 1983-2018](#)

Jonathan J. Darrow, SJD, JD, MBA; Jerry Avorn, MD; Aaron S. Kesselheim, MD, JD, MPH

JAMA. 2020;323(2):164-176. doi:10.1001/jama.2019.20288

Key Points

Question How has the regulation of prescription drugs evolved from the 1980s to 2018, and what trends have occurred in drug approvals?

Findings Approvals of new generic drugs have increased over time, leading to greater competition. Technological advances have been reflected in increased approvals of biologics over time. The number of expedited development and approval programs has expanded greatly since 1983, reducing the amount of evidence available at the time of approval and increasing uncertainty about the existence or amount of clinical benefit. These regulatory innovations have not clearly led to an increase in new drug approvals or to reduced total development times.

Meaning While retaining policies that encourage efficient review, Congress and other government officials should also consider the implications of less rigorous clinical outcome requirements and whether the current complex array of regulatory programs should be simplified.

Abstract

Importance US law requires testing of new drugs before approval to ensure that they provide a well-defined benefit that is commensurate with their risks. A major challenge for the US Food and Drug Administration (FDA) is to achieve an appropriate balance between rigorous testing and the need for timely approval of drugs that have benefits that outweigh their risks.

Objective To describe the evolution of laws and standards affecting drug testing, the use of new approval programs and standards, expansions of the role and authority of the FDA, and changes in the number of drugs approved from the 1980s to 2018.

Evidence Sources of evidence included principal federal laws and FDA regulations (1962-2018) and FDA databases of approved new drugs (1984-2018), generic drugs (1970-2018), biologics (1984-2018), and vaccines (1998-2018); special development and approval programs (Orphan drug [1984-2018], Fast-Track [1988-2018], Priority Review and its predecessors [1984-2018], Accelerated Approval [1992-2018], and Breakthrough Therapy [2012-2018]); expanded access (2010-2017) and Risk Evaluation and Mitigation Strategies (2008-2018); and user fees paid to the FDA by industry (1993-2018).

Findings From 1983 to 2018, legislation and regulatory initiatives have substantially changed drug approval at the FDA. The mean annual number of new drug approvals, including biologics, was 34 from 1990-1999, 25 from 2000-2009, and 41 from 2010-2018. New biologic product approvals increased from a median of 2.5 from 1990-1999, to 5 from 2000-2013, to 12 from 2014-2018. The median annual number of generic drugs approved was 136 from 1970 to the enactment of the Hatch-Waxman Act in 1984; 284 from 1985 to the enactment of the Generic Drug User Fee Act in 2012; and 588 from 2013-2018. Prescription drug user fee funding expanded from new drugs and biologics in 1992 to generic and biosimilar drugs in 2012. The amount of Prescription Drug User Fee Act fees collected from industry increased from an annual mean of \$66 million in 1993-1997 to \$820 million in 2013-2017, and in 2018, user fees accounted for approximately 80% of the salaries of review personnel responsible for the approval of new drugs. The proportion of drugs approved with an Orphan Drug Act designation increased from 18% (55/304) in 1984-1995, to 22% (82/379) in 1996-2007, to 41% (154/380) in 2008-2018. Use of Accelerated Approval, Fast-Track, and Priority Review for new drugs has increased over time, with 81% (48/59) of new drugs benefiting from at least 1 such expedited program in 2018. The proportion of new approvals supported by at least 2 pivotal trials decreased from 80.6% in 1995-1997 to 52.8% in 2015-2017, based on 124 and 106 approvals, respectively, while the median number of patients studied did not change significantly (774 vs 816). FDA drug review times declined from more than 3 years in 1983 to less than 1 year in 2017, but total time from the authorization of clinical testing to approval has remained at approximately 8 years over that period.

Conclusions and Relevance Over the last 4 decades, the approval and regulation processes for pharmaceutical agents have evolved and increased in complexity as special programs have been added

and as the use of surrogate measures has been encouraged. The FDA funding needed to implement and manage these programs has been addressed by expanding industry-paid user fees. The FDA has increasingly accepted less data and more surrogate measures, and has shortened its review times.

Viewpoint

Treatment Decisions for a Future Self - Ethical Obligations to Guide Truly Informed Choices

Claire J. Creutzfeldt, MD; Robert G. Holloway, MD, MPH

JAMA. 2020;323(2):115-116. doi:10.1001/jama.2019.19652

This Viewpoint discusses the reality that most decisions about treatment for incapacitated patients involve surrogate assessments of patients' past values at their baseline health, and it proposes that more ethical and informed decision-making would help surrogates consider the degree to which their loved one might be able to adapt to and value a future health state at what is a higher level of disability.

Monitoring the health-related Sustainable Development Goals: lessons learned and recommendations for improved measurement

Samira Asma, Rafael Lozano, Somnath Chatterji, Soumya Swaminathan, Maria de Fátima Marinho, Naoko Yamamoto, Elena Varavikova, Awoke Misganaw, Michael Ryan, Lalit Dandona, Ren Minghui, Christopher J L Murray

The UN General Assembly launched the Sustainable Development Goals (SDGs) in September, 2015.¹ The original global SDG framework included 17 goals, 169 targets, and 232 unique indicators.² Of these, 12 goals, 33 targets, and 57 indicators have been identified as health-related SDGs (HRSDGs),^{3,4,5,6} that is, pertaining to health outcomes, health services, and well-established environmental, occupational, behavioural, and metabolic risks. The scope of health in the SDGs is much broader than in the Millennium Development Goals, spanning from maternal and child health and infectious diseases to non-communicable diseases, injuries, risk factors, and health-system functions. Regular monitoring of the HRSDGs is important for fostering a shared notion of accountability for results, identifying important gaps in resources and rates of progress, and taking into account emerging challenges that can influence the trajectory of progress. Regular monitoring and accountability will be essential to sustain policy focus and funding for the broad and complex HRSDG agenda.

[A call for global action for rare diseases in Africa](#)

The 11th International Conference on Rare Diseases and Orphan Drugs (ICORD), South Africa, included the Africa-Rare initiative launch and facilitated multi-stakeholder engagement in the challenges facing, and opportunities for, Africans living with rare diseases. The following ICORD Global Call to Action, developed in collaboration with the International Rare Diseases Research Consortium, synthesizes the outcomes of the deliberations and emphasizes the international collaborative efforts required to address the global effects of rare diseases on public health.

[The Role of Agriculture and Foreign Remittances in Mitigating Rural Poverty: Empirical Evidence from Pakistan](#)

Liu Y, Amin A, Rasool SF, Zaman QU

Published Date: 16 January 2020

Abstract

Background: This study examines the role of the agriculture and foreign remittances in mitigating rural poverty in Pakistan.

Methods: The data used relate to the period 1980– 2017 and are sourced from the World Bank and the Economic Survey of Pakistan produced annually by the Ministry of Finance. The ARDL technique was used to calculate the effects of agriculture and foreign remittances on rural poverty.

Results: The results of this study indicate that agriculture helps to mitigate rural poverty in the long run, but that foreign remittances are more effective in reducing rural poverty in the short run. In this paper, results confirm the existence of correlations between agriculture, foreign remittances and rural poverty.

Conclusion: The outcomes of this study support the call for the government to introduce agricultural credit schemes for the rural population of Pakistan. Moreover, the government should take steps to enhance diplomatic relations with other countries and simplify policies and visa application procedures for Pakistani workers. Finally, this study suggests the government should simplify procedures for the transfer of foreign remittances to Pakistan.

Feature

[Transparency on trial](#)

By Charles Piller

Science 17 Jan 2020 : 240-243 Full Access

Many clinical trial results aren't posted publicly, as U.S. law requires—and a promised crackdown has fizzled.

Summary

Companies, universities, and other institutions that conduct clinical trials are required to record the results of most of them in a federal database, so that doctors and patients can see whether new treatments are safe and effective. But a Science investigation has found that many persist in not reporting those results, and the U.S. Food and Drug Administration (FDA) and National Institutes of Health (NIH) are doing little to nothing to enforce the reporting requirement—despite recent promises to the contrary. While many pharma companies have improved their reporting of trial results over the past few years, a large number of universities and academic medical centers continue to have bad records. Ironically, NIH itself is part of the problem—its top institutes for clinical trials have a poor record of reporting results of those trials for which they are responsible. Science checked all 4768 trials whose results have come due under legal requirements finalized by NIH and FDA 3 years ago. Overall, sponsors violated the reporting law more than 55% of the time. Yet FDA has never fined a trial sponsor for noncompliance and NIH has never publicly named or withdrawn a grant from violators, although such actions were vowed in 2016 when ClinicalTrials.gov's requirements were clarified.

Mobile protected areas for biodiversity on the high seas

By Sara M. Maxwell, Kristina M. Gjerde, Melinda G. Conners, Larry B. Crowder

Science 17 Jan 2020 : 252-254 Restricted Access

Protecting mobile marine species and habitats under climate change will require innovative and dynamic tools

Summary

A new agreement is being negotiated under the 1982 United Nations Convention on the Law of the Sea (UNCLOS) to provide legally binding mechanisms to protect the marine environment and to conserve and ensure the sustainable use of marine biodiversity on the high seas (international waters in areas beyond national jurisdiction) (1). One of the suggested objectives in the current draft text is to “apply an approach that builds ecosystem resilience to the adverse effects of climate change” when applying area-based management tools (ABMTs), including marine protected areas (MPAs). Yet even though climate change is resulting in shifts in species' ranges (2) and in the behavior of the human users of mobile, commercially valuable species (3), protection of highly mobile species and the dynamic habitats on which they depend is not currently a focus of negotiations. With the final language to be determined as early as 2020 (1), we urge negotiators to include new dynamic management tools, including mobile MPAs (mMPAs), whose boundaries shift across space and time, that could help to safeguard marine life and build ecosystem resilience by protecting dynamic habitats as well as migratory marine species in a changing ocean.

New Technologies: Where To?

This issue focuses on new technologies and their potential benefits for humanity as well as their expanding use in advancing the 2030 Agenda. It explores the promise of our digital age, while posing important questions about where these technologies are leading us, and how their misuse could also lead to increased inequality and conflict.
