Agriculture

[Bill & Melinda Gates Foundation Statement on Creation of Nonprofit Agricultural Research Institute](#)

SEATTLE, January 21, 2020 – The Bill & Melinda Gates Foundation is in the process of creating a new 501(c)(3) nonprofit, **Bill & Melinda Gates Agricultural Innovations, LLC**, which seeks to accelerate the development of innovations supported by the foundation's Agricultural Development team. The entity, to be known as **Gates Ag One**, **aims to speed up efforts to provide smallholder farmers in developing countries, many of whom are women, with access to the affordable tools and innovations they need to sustainably improve crop productivity and adapt to the effects of climate change.**

In two of the fastest growing regions of the world—sub-Saharan Africa, home to around 1 billion people, and South Asia, with a population of about 1.8 billion—approximately 60 percent of the population lives in rural areas that typically depend on smallholder agriculture for food and income. In sub-Saharan Africa, agriculture accounts for more than half of the region's employment, and for South Asia it contributes about 40 percent. Yields on farms in these regions are already far below what farmers elsewhere in the world achieve, and climate change will make their crops even less productive.

Gates Ag One will collaborate with a diverse community of regional and international public- and private-sector partners, as well as interested governments, to enable the advancement of resilient, yield-enhancing seeds and traits globally and facilitate the introduction of those breakthroughs into specific crops essential to smallholder farmers, particularly in sub-Saharan Africa and South Asia.

The goal of Gates Ag One is to help the foundation deliver on its mission to empower smallholder farmers with the affordable, high-quality tools, technologies, and resources they need to lift themselves out of poverty. The foundation is still in the early planning stages, and we look forward to sharing additional details in the future. For more information on Gates Ag One, please consult our [frequently asked questions](#) document.

Education

[George Soros Launches Global Network to Transform Higher Education](#)

Open Society Founder and Chair gifts \$1 billion to newly launched Open Society University Network

January 23, 2020

DAVOS, SWITZERLAND—George Soros announced today that he is creating a new university network to better prepare students for current and future global challenges. He is **endowing the network with one billion dollars (\$1 billion) and asking other philanthropists to contribute.**

The network, which will operate throughout the world, is named the Open Society University Network (OSUN). It will integrate teaching and research across higher education institutions worldwide. It will offer simultaneously taught network courses and joint degree programs and regularly bring students and faculty from different countries together with in-person and online discussions. The network aims to reach the students who need it the most and to promote the values of open society—including free expression and diversity of beliefs.

OSUN will seek to promote rigorous education and reach institutions in need of international partners, as well as neglected populations, such as refugees, incarcerated people, the Roma and other displaced groups. OSUN, with the help of its allies, is ready to start a massive “scholars at risk” program, merging a large number of academically excellent but politically endangered scholars into this new global network.

Already, OSUN is connecting institutions of higher learning and is holding networked courses that unite students and faculty from several universities located in different parts of the world in the classroom, sharing faculty and conducting joint research projects in which people from many universities collaborate.

Mr. Soros said: “I believe our best hope lies in access to an education that reinforces the autonomy of the individual by cultivating critical thinking and emphasizing academic freedom. I consider the Open Society University Network to be the most important and enduring project of my life and I should like to see it implemented while I am still around.”...

.....

Open Society University Network (OSUN)

The Open Society University Network (OSUN) is a new global network that integrates learning and the advancement of knowledge across geographic and demographic boundaries, promotes civic engagement on behalf of open societies, and expands access of underserved communities to higher education.

Mission

- :: Foster critical thinking, open intellectual inquiry, and fact-based research to strengthen foundations of open society amid authoritarian resurgence
- :: Educate students to address tomorrow’s global challenges by getting to know other societies from the inside
- :: Expand access to higher education at a time of growing inequities
- :: Counteract polarization by promoting global research collaboration and educating students to examine issues from different perspectives and advance reasoned arguments
- :: Bolster efforts by universities in challenging environments to build their own capacity through global partnerships to make greater contributions to their societies

Myanmar – ICC

International Court of Justice [ICJ]

APPLICATION OF THE CONVENTION ON THE PREVENTION AND PUNISHMENT OF THE CRIME OF GENOCIDE (THE GAMBIA v. MYANMAR)

23 January 2020

CHRONOLOGY OF THE PROCEDURE 1-13

I. PRIMA FACIE JURISDICTION 16-38

1. General introduction 16-19

2. Existence of a dispute relating to the interpretation, application or fulfilment of the Genocide Convention 20-31

3. The reservation of Myanmar to Article VIII of the Convention 32-36

4. Conclusion as to prima facie jurisdiction 37-38

II. QUESTION OF THE STANDING OF THE GAMBIA 39-42

III. THE RIGHTS WHOSE PROTECTION IS SOUGHT AND THE LINK BETWEEN SUCH RIGHTS AND THE MEASURES REQUESTED 43-63

IV. RISK OF IRREPARABLE PREJUDICE AND URGENCY 64-75

V. CONCLUSION AND MEASURES TO BE ADOPTED 76-85

OPERATIVE CLAUSE 86 [p.25]

...86. For these reasons,

THE COURT,

Indicates the following provisional measures:

(1) Unanimously,

The Republic of the Union of Myanmar shall, in accordance with its obligations under the Convention on the Prevention and Punishment of the Crime of Genocide, in relation to the members of the Rohingya group in its territory, take all measures within its power to prevent the commission of all acts within the scope of Article II of this Convention, in particular:

(a) killing members of the group;

(b) causing serious bodily or mental harm to the members of the group;

(c) deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part; and

(d) imposing measures intended to prevent births within the group;

(2) Unanimously,

The Republic of the Union of Myanmar shall, in relation to the members of the Rohingya group in its territory, ensure that its military, as well as any irregular armed units which may be directed or supported by it and any organizations and persons which may be subject to its control, direction or influence, do not commit any acts described in point (1) above, or of conspiracy to commit genocide, of direct and public incitement to commit genocide, of attempt to commit genocide, or of complicity in genocide;

(3) Unanimously,

The Republic of the Union of Myanmar shall take effective measures to prevent the destruction and ensure the preservation of evidence related to allegations of acts within the scope of Article II of the Convention on the Prevention and Punishment of the Crime of Genocide;

(4) Unanimously,

The Republic of the Union of Myanmar shall submit a report to the Court on all measures taken to give effect to this Order within four months, as from the date of this Order, and thereafter every six months, until a final decision on the case is rendered by the Court...

.....

Press briefing note on Myanmar

Spokesperson for the UN High Commissioner for Human Rights: Liz Throssell
Geneva, 24 January 2020

We welcome the Order by the International Court of Justice that Myanmar must take "all measures within its power" to protect the members of the Rohingya group from all future acts that may amount to genocide under the provisions of Article II of the Convention on the Prevention and Punishment of the Crime of Genocide.*

The High Commissioner has repeatedly expressed serious concerns about the situation of the Rohingya following the repeated waves of violence suffered by them, most recently in 2016 and 2017. She has frequently called for the full protection of their human rights, and genuine accountability for the serious violations and abuses they have endured.

As the Secretary-General noted yesterday, these provisional measures indicated by the Court are binding under international law.

The UN Human Rights Office calls on Myanmar to immediately and unconditionally implement them in full, consistently with its obligations under the Charter and the Court's Statute...

Opinion : Myanmar

Aung San Suu Kyi: Give Myanmar time to deliver justice on war crimes

Independent commission has documented killing of civilians and looting

This week, a comprehensive inquiry into the 2017 violence and mass displacement in the state of Rakhine presented its final report to Myanmar's president.

The Independent Commission of Enquiry interviewed close to 1,500 witnesses, including security personnel and affected persons. It has gathered more first-hand information than any other fact-finding body in the world.

Its findings and recommendations for further domestic investigation and prosecution are unequivocal, belying those who chose to prejudge it as ineffective. The material should now be given a chance to inform both discussions on accountability for human rights violations that occurred and a road map for change in the area.

Mobilising international justice takes time and dedication. The process can too easily become attached to specific testimonies of victimisation and consequently rendered inseparable from the narrative they feed. A fair reading of the ICOE report would show that this is a real risk in the current international proceedings on events in Rakhine.

The case against Myanmar before the International Court of Justice, the statements by the prosecutor to the International Criminal Court, and the private lawsuit brought in Argentina all rely extensively on a fact-finding mission by the UN Human Rights Council. This is precariously dependent on statements by refugees in camps in Bangladesh.

The ICOE reports that some refugees may have provided inaccurate or exaggerated information. While this is understandable, we have to recognise that there is a systemic challenge. The international justice system may not yet be equipped to filter out misleading information before shadows of incrimination are cast over entire nations and governments. Human rights groups have condemned Myanmar based on unproven statements without the due process of criminal investigation.

The international condemnation has had a negative effect on Myanmar's endeavours to bring stability and progress to Rakhine. It has undermined painstaking domestic efforts to establish co-operation between the military and the civilian government. It hampers our ability to lay the foundation for sustainable development in a very diverse country. It has presented a distorted picture of Myanmar and affected our bilateral relations. Should countries with even fewer resources than Myanmar be similarly condemned, the consequences for them could be dire.

To provide the strongest protection for human rights, we need to reform the ways in which unsubstantiated narratives are relied upon by the UN and non-governmental organisations. The voice of victims must be heard and must always touch our hearts. But it is equally important that fact-finders are vigilant in their search for truth. Recommended Myanmar Aung San Suu Kyi says war crimes 'may have been committed'

I stated at the ICJ that there would be domestic investigations and prosecutions if the ICOE report presented further evidence of violations in Rakhine. The ICOE has done that, concluding that war crimes were committed during the internal armed conflict with the Arakan Rohingya Salvation Army by members of Myanmar's security forces and civilians. The report details killing of civilians, disproportionate use of force, looting of property, and destruction of abandoned homes of Muslims. The ICOE found no evidence of genocide.

Myanmar's Union Attorney-general has already announced plans to investigate civilians who may have participated in looting or burning of villages. War crimes that may have been committed by members of the Defence Services will be prosecuted through our military justice system.

We need to respect the integrity of these proceedings and to refrain from unreasonable demands that Myanmar's criminal justice system complete investigations in a third of the time routinely granted to international processes.

It is never easy for armed forces to recognise the self-interest in accountability for their members, and then follow through with actual investigations and prosecutions. This is a common challenge around the world. But that does not mean that international justice should immediately come into play.

An informed assessment of Myanmar's ability to address the issue of violations in Rakhine can only be made if adequate time is given for domestic justice to run its course.

Justice can help us overcome distrust and fear, prejudice and hate, and end longstanding cycles of intercommunal violence. This has always been my goal. This is what we are working to achieve.

International justice should not itself fall victim to the extreme polarisation which characterises discussions on the situation in Rakhine.

The writer is state counsellor of Myanmar

Inequality

World Social Report 2020: Inequality in a rapidly changing world

UN DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS

2020 :: 218 pages

PDF: <http://www.un.org/development/desa/dspd/wp-content/uploads/sites/22/2020/01/World-Social-Report-2020-FullReport.pdf>

Overview

The World Social Report 2020 examines the impact of four such megatrends on inequality: technological innovation, climate change, urbanization and international migration. Technological change can be an engine of economic growth, offering new possibilities in health care, education, communication and productivity. But it can also exacerbate wage inequality and displace workers. The accelerating winds of climate change are being unleashed around the world, but the poorest countries and groups are suffering most, especially those trying to eke out a living in rural areas. Urbanization offers unmatched opportunities, yet cities find abject poverty and opulent wealth in close proximity, making gaping and increasing levels of inequality all the more glaring. International migration allows millions of people to seek new opportunities and can help reduce global disparities, but only if it occurs under orderly and safe conditions. Whether these mega-trends are harnessed to encourage a more equitable and sustainable world, or allowed to exacerbate disparities and divisions, will largely determine the shape of our common future.

KEY MESSAGES

:: Inequality within countries is very high but it is not rising everywhere. Since 1990, income inequality has increased in most developed countries. Inequality declined in most Latin American countries from 1990 to the early 2010s but is increasing again in some of them.

:: Inequality trends differ across countries at even similar levels of development.

:: Income inequality among countries has declined in relative terms but is still higher than inequality within most countries. Absolute income differences between countries continue to grow.

:: The world is far from the goal of equal opportunity for all: circumstances beyond an individual's control, such as gender, race, ethnicity, migrant status and, for children, the socioeconomic status of their parents, continue to affect one's chances of succeeding in life.

:: Group-based inequalities are declining in some cases but still growing in many others. Unless progress accelerates, leaving no one behind will remain a still distant goal by 2030.

:: High or growing inequality not only harms people living in poverty and other disadvantaged groups. It affects the well-being of society at large.

:: Highly unequal societies grow more slowly than those with low inequality and are less successful at reducing poverty.

:: Without appropriate policies and institutions, inequalities in outcomes create or preserve unequal opportunities and perpetuate social divisions.

:: Rising inequality has created discontent, deepened political divides and can lead to violent conflict.

Governance

2019 Corruption Perceptions Index shows anti-corruption efforts stagnating in G7 countries

Analysis reveals corruption more pervasive in countries where money influences political power

Transparency International Secretariat

January 23, 2020 Issued by

Report: <https://www.transparency.org/cpi2019>

More than two-thirds of countries – along with many of the world’s most advanced economies – are stagnating or showing signs of backsliding in their anti-corruption efforts, according to the 2019 Corruption Perceptions Index (CPI) released today by Transparency International.

Countries in which elections and political party financing are open to undue influence from vested interests are less able to combat corruption, analysis of the results finds.

“Frustration with government corruption and lack of trust in institutions speaks to a need for greater political integrity,” said Delia Ferreira Rubio, Chair of Transparency International. “Governments must urgently address the corrupting role of big money in political party financing and the undue influence it exerts on our political systems.”

CPI highlights

The CPI ranks 180 countries and territories by their perceived levels of public sector corruption, drawing on 13 expert assessments and surveys of business executives. It uses a scale of zero (highly corrupt) to 100 (very clean).

More than two-thirds of countries score below 50, with an average score of only 43. Since 2012, only 22 countries have significantly improved their scores, including Estonia, Greece and Guyana. Twenty-one have significantly declined, including Australia, Canada and Nicaragua.

Our research shows several of the most advanced economies cannot afford to be complacent if they are to keep up their anti-corruption momentum. Four G7 countries score lower than last year: Canada (-4), France (-3), the UK (-3) and the US (-2). Germany and Japan have seen no improvement, while Italy gained one point.

Corruption and political integrity

Analysis shows that countries that perform well on the CPI also have stronger enforcement of campaign finance regulations and broader range of political consultation.

Countries where campaign finance regulations are comprehensive and systematically enforced have an average score of 70 on the CPI, whereas countries where such regulations either don’t exist or are poorly enforced score an average of just 34 and 35 respectively.

Sixty per cent of the countries that significantly improved their CPI scores since 2012 also strengthened regulations around campaign donations.

"The lack of real progress against corruption in most countries is disappointing and has profound negative effects on citizens around the world," said Patricia Moreira, Managing Director of Transparency International. "To have any chance of ending corruption and improving peoples' lives, we must tackle the relationship between politics and big money. All citizens must be represented in decision making."...

"Nuclear War, Climate Disaster, Multilateralism"

[Doomsday Clock 2020: it is 100 seconds to midnight](#)

23 Jan 2020

The Elders call on the world to wake up to the threats of nuclear war and climate disaster as they unveil the 2020 Doomsday Clock.

Mary Robinson, Chair of The Elders and former President of Ireland, and Ban Ki-moon, Deputy Chair of The Elders and former United Nations Secretary-General, today joined experts from the Bulletin of Atomic Scientists for the unveiling of the Doomsday Clock in Washington DC, an annual assessment of the existential risks faced by humanity.

The Clock's hands were moved forward to 100 seconds to midnight - the closest to midnight they have been since they were first set in 1947. The decision takes into account the precarious state of nuclear arms controls, the growing threat of climate disaster, and how these can be compounded by disruptive new technologies.

"Our planet faces two concurrent existential threats: the climate crisis and nuclear weapons. We are faced by a gathering storm of extinction-level consequences, and time is running out," Mary Robinson said...

Speech

[To overcome existential threats, we need to re-energise multilateralism](#)

23 Jan 2020

Unveiling the 2020 Doomsday Clock in partnership with the Bulletin of the Atomic Scientists, Ban Ki-moon urges world leaders to focus on the clear dangers of nuclear escalation and climate emergency. The following is a transcript of his 23 January speech

...As Mary Robinson has said, it is an honour to be here today to unveil the Doomsday Clock. But is with a solemn sense of duty, with a moral responsibility, and with a frightening sense of what is happening.

These are perilous times. The alarming rise in tensions in the Middle East threatens war, and a return to nuclear weapons development in Iran. The world waits to see how North Korea will respond to stalled negotiations over its nuclear ambitions. I am struck by the news released from North Korea that it would not be committed to previously made commitments, to nuclear disarmament, and the denuclearisation of the Korean Peninsula. This is surprising and very, very shocking. Also, the situation in Kashmir between nuclear-armed Pakistan and India remains unpredictable and highly dangerous.

Such tensions demand responsible global leadership, but instead over the last year we have seen precisely the opposite. We have seen the termination of the Intermediate-Range Nuclear Forces Treaty, division and uncertainty regarding the upcoming Review Conference of the Non-Proliferation Treaty, and, most worryingly, the absence of any meaningful negotiations between the US and Russia to extend New START.

It would send a deeply negative message to the world if New START is allowed to expire in February 2021. This would not only eliminate remaining constraints on deployed nuclear arsenals, but also remove the monitoring and inspection capabilities which have provided both sides with increased transparency regarding nuclear capability.

On the Nuclear Proliferation Treaty, The Elders believe the world must seize the opportunities presented by the review conference that begins in April. This treaty is the backbone of the multilateral consensus on nuclear arms control, and yet disagreements and frustrations between its signatories mean there is a significant risk that the conference could conclude without an agreed outcome – a scenario that would undermine the treaty and could even trigger withdrawal by member states.

Alongside the potential expiry of New START, this is a disastrous scenario for the world. It exemplifies the failures of global leadership, and the weakness of the multilateral system in the face of isolationist politics that sees diplomacy as a zero-sum game rather than a means of finding common solutions to common challenges.

At a time when world leaders should be focused on the clear and present dangers of nuclear escalation and the climate emergency, we are instead witnessing denial, disregard and dangerous brinkmanship. The existential risks of climate change and nuclear war are increasing just as the decision-making frameworks to address them are unravelling. From the Paris Agreement to the JCPOA; despondency over the Non Proliferation Treaty to impotency at the UN Security Council – our mechanisms for collaboration are being undermined when we need them most.

To echo Mary Robinson - we must see urgent action on the climate crisis in 2020. All countries must come to COP in Glasgow in November with clear plans for delivering carbon net-zero commitments by 2050. We must see an immediate end to the investment in, and exploration of, fossil fuels. We must heed the demands of the young people on our streets and listen to the science.

We cannot negotiate with nature. We must listen to the warning of nature.

The US must somehow begin to demonstrate leadership at the federal level too. Without it, we cannot hope to meet the targets that will keep global warming to manageable levels. Without US leadership there will be no winners from this climate crisis, only losers.

In the end, we will only overcome these existential threats by working together, and to do so the world needs to re-energise multilateralism. I do believe there is an opportunity for this in the coming year.

2020 marks 75 years since the end of Second World War and the birth of the nuclear age – and, indeed, the founding of the Bulletin of Atomic Scientists. It also marks the 75th anniversary of the founding of the United Nations.

This is an opportunity for the world to renew its commitment to multilateralism. It is a time for world leaders to bring a new mindset to the key moments ahead of us in 2020 – to create the foundations for a just transition to a carbon net zero economy, and redouble the efforts towards a world free of nuclear weapons.

We can overcome the existential threats we face, but we must act, together, now. No country, no individual, no matter how powerful or how many resources, can do this on their own. We need to hold hands and work together.

Thank you.

Emergencies

Statement on the meeting of the International Health Regulations (2005) Emergency Committee regarding the outbreak of novel coronavirus (2019-nCoV)

23 January 2020

Statement, Geneva, Switzerland

[Excerpt]

:: Human-to-human transmission is occurring and a preliminary R0 estimate of 1.4-2.5 was presented. Amplification has occurred in one health care facility. Of confirmed cases, 25% are reported to be severe. The source is still unknown (most likely an animal reservoir) and the extent of human-to-human transmission is still not clear.

:: Several members considered that it is still too early to declare a PHEIC [Public Health Emergency of International Concern], given its restrictive and binary nature.

:: The Committee stands ready to be reconvened in approximately ten days' time, or earlier should the Director-General deem it necessary. ..

[Cash transfer schemes reduce the chances of adolescent girls and young women contracting HIV](#)

Efforts aimed at redressing gender inequalities and socioeconomic inequities can mitigate factors that fuel the HIV epidemic.

In a study in Eswatini, cash transfers aimed at keeping adolescent girls and young women in school and giving them greater financial independence resulted in the odds of the recipients becoming HIV-positive being 25% lower than for people who were not eligible for the incentive.

Studies from Eswatini, Lesotho, Malawi and the United Republic of Tanzania show that cash transfers help young people, especially girls, stay in school longer and do better in their studies. Other evidence indicates that cash grants that enable girls to continue their schooling also delay their sexual debut, increase their use of health services, reduce teen pregnancies and early marriage, and can promote safer sexual behaviours.

Press Release 21 Jan 2020
:: A new vaccine against one of the world's deadliest childhood diseases – pneumonia – is now available at a more affordable price than existing vaccines.
:: Vaccine funding organisation, Gavi, the Vaccine Alliance, has a \$1.5 billion funding programme for the pneumonia vaccine, of which 80 per cent has already been paid to two pharma giants.
:: MSF urges Gavi – and WHO, UNICEF and the Gates Foundation – to ensure that the remaining amount is spent to ensure access to this third, more affordable, vaccine to protect children.

Gavi statement following the death of Peter Salama

23 January 2020

World leaders commit to Gavi's vision to protect the next generation with vaccines

As Gavi celebrates its 20th anniversary at Davos, Germany and the Bill & Melinda Gates Foundation pledged catalytic support to Gavi, citing remarkable progress since 2000

Davos, 23 January 2020 – Global leaders committed to Gavi, the Vaccine Alliance's vision to immunise hundreds of millions of children in the world's poorest countries as they celebrated Gavi's 20th anniversary at the World Economic Forum (WEF), citing remarkable progress since its inception in 2000.

Demonstrating outstanding leadership in global health, Chancellor Angela Merkel announced at WEF that Germany will commit €600 million for the 2021-25 five-year period...

...The Bill & Melinda Gates Foundation also announced on the sidelines of the World Economic Forum in Davos that it will renew its US\$ 75 million contribution to the Gavi Matching Fund, an innovative

public-private funding mechanism that secures resources to incentivise private sector investments in immunisation...

Global Fund Appoints New Head of Technical Advice & Partnerships

24 January 2020

GENEVA – The Global Fund to Fight AIDS, Tuberculosis and Malaria today announced the appointment of Michael Byrne as Head of the Technical Advice & Partnerships Department as the Global Fund strengthens technical expertise in disease teams.

“To step up the fight and most effectively leverage additional funds, we are elevating the capacity of our disease teams to help achieve global targets,” said Peter Sands, Executive Director of the Global Fund. “Michael will lead these efforts, and they should make a significant difference in our work with partners to accelerate progress against HIV, TB and malaria.”

Byrne brings 30 years of experience in international development including 13 years at the Global Fund...

News

Global Fund Grant in the Democratic People’s Republic of Korea

23 January 2020

The Global Fund has reached agreement with partners for a consolidated grant for tuberculosis and malaria in the Democratic People’s Republic of Korea, and implementation of the grant has begun.

Under this grant, the drug-susceptible tuberculosis and malaria component will be implemented by UNICEF and the World Health Organization. The multidrug-resistant tuberculosis (MDR-TB) component will be implemented by the Eugene Bell Foundation. With these revised implementation arrangements, the Global Fund is confident that partners can serve more people affected by tuberculosis and malaria, and achieve required levels of assurance that the grant is being implemented effectively.

The agreement was made possible by extensive collaboration by technical and development partners, and by the Government of DPRK. The Global Fund remains committed to supporting the health of people in DPRK, and thanks all partners for their continuous cooperation and collaboration during the grant negotiations.

Brief

Tax Expenditure Basics

Tax expenditures are the revenue losses attributable to special provisions in tax laws that reduce taxes for certain sources or uses of income or for certain groups of taxpayers. They are called tax expenditures because many of them effectively serve the same function as direct spending programs despite operating as tax reductions. In this report we briefly discuss some basic tax expenditure concepts: what they are, the

Geological or Cultural Heritage? The Ex Situ Scientific Collections as a Remnant of Nature and Culture

Scientific heritage, here analysed in its subdivisions of geological and palaeontological heritage, is recognized by its embedded values in scientific collections. More specifically, ex situ scientific collections are remnants of nature and, as such, are sometimes considered geological heritage or elements of cultural heritage, depending on the perception of the researchers on geological heritage. They are a powerful resource for education, promoting creativity and social coherence.

The Role of UNESCO Global Geoparks in Promoting Geosciences Education for Sustainability

Following the establishment in 2000 of the first geoparks, the role of UNESCO Global Geoparks (UGGps) in geoscience education for sustainability needs to be characterized and understood. This is particularly relevant because education is one of the three main pillars of UGGps. In fact, UNESCO Global Geoparks are excellent opportunities to assist schools as outdoor classrooms and to be incubators of sustainable development, sustainable lifestyles, the appreciation of natural and cultural diversity, and the promotion of peace. For these reasons, UGGps are also effective strategies for the promotion of the seventeen United Nations Sustainable Development Goals (Agenda 2030).

2020: Gene Therapy Enters Its Fourth Decade

Terence R. Flotte and Guangping Gao

Published Online: 21 Jan 2020

Human gene therapy burst onto the scene in 1990, with the first therapeutic gene transfer attempted for patients with severe combined immune deficiency due to adenosine deaminase deficiency. The pioneering steps of the 1990s led to early evidence of clinical efficacy in the 2000s and a number of gene therapy products approved by the Food and Drug Administration and European Medicines Agency in the 2010s. As clinical gene therapy enters its fourth decade, the 2020s, it is appropriate to take stock of gains that the field has enjoyed and to discuss continued limitations of this crucial set of platform technologies.

Gene therapy originated as a concept when Theodore Friedmann and Richard Roblin published a seminal paper in *Science* in 1972, indicating clearly that all of the elements were present to deliver genes into human cells with the necessary transcriptional promoter and polyadenylation signals required for an mRNA to be expressed and subsequently translated into a therapeutic protein.¹ Friedmann anticipated that for monogenic disorders, particularly autosomal recessive Mendelian disorders, this could prevent or reverse the phenotypic manifestations of a disease.

In the decades that followed, the concept of hijacking the mechanisms that viruses have evolved to deliver genes into human cells became a reality, first in eukaryotic cells, then in animals, and finally in patients. This pathway was reproduced with several viral vector classes: gammaretroviruses (RV), adenoviruses (Ad), adeno-associated viruses (AAV), herpes simplex viruses (HSV), lentiviruses (LV), and a few others. Additional advances in understanding the basic biology of life, such as the discovery

of RNA interference as a mechanism to downregulate gene expression and the CRISPR-Cas system as a means of editing genes, have opened new avenues for the design of gene therapeutics. Meanwhile, more breakthroughs in studying stem-cell biology, particularly with regard to hematopoietic stem cells and in cancer immunotherapy, have provided highly effective platforms for ex vivo gene therapy.

Opportunities and Challenges

As we enter a new decade, the field of gene therapy is faced with unprecedented opportunities, along with certain persistent challenges and even some potential serious risks. The opportunities that are nearest at hand include those in gene silencing, gene editing, RNA editing, base editing, and prime editing. The last two of these, both developed in David Liu's lab, are cutting-edge adaptations of CRISPR-mediated RNA guidance, in which the Cas-sgRNA complex directs the genome sequence specificity and is combined with additional enzymatic functions either to change nucleotide bases by deamination² or to rewrite them by reverse transcription.³ In the next few years, each of these new molecular mechanisms will be tested in various applications in molecular medicine, including cells, animals, and patients. Those efforts will help to create a more complete picture of how well each modality works in terms of efficiency and safety.

Limitations of current and future gene therapy technologies are bound to linger for several years. One of the most acute limitations is still the availability of large-scale, low-cost manufacturing capacity for gene therapy vectors. The specifics of this limitation include the necessity for further understanding viral vector replication and packaging biology and producer cell biology, and the complexity of the upstream cell-based manufacturing platform, which often begins with transfection of adherent cells in culture. While stable packaging lines exist for some vector types, this is not true of all right now, and the adaptation of manufacturing cell lines to suspension to microcarriers or higher complexity substrates requires ongoing engineering efforts. Parallel issues associated with downstream effective separation of empty from full viral particles and purification of vectors are also a major focus of current efforts. While each of these issues is addressable, they will require significant time, effort, and energy.

Another intrinsic limitation of current systems is that of delivery to large or difficult to access target cell populations within the body. For gene therapy to the central nervous system, most vectors still cross the blood–brain barrier poorly, and there are other barriers to broad dissemination of vectors via either direct injection into the brain parenchyma or into the cerebrospinal fluid. Finally, managing innate and adaptive immunity to transgene products and vector components remains a very significant challenge to the field.

Future Steps

Our community should be cautioned that underlying these challenges are several important risks that the field may face in the next decade. In the current commercial environment, there is an imperative to get new therapies to the clinic as quickly as possible and to push forward toward investment-driven milestones with determined haste. This can be productive when the gene therapy designs (vector, route, and dose) are sound. However, the imperative to move forward quickly must not lead to undue risk taking in the clinic.

One example of this has been the recent desire to escalate intravenous doses of rAAV9 vectors in clinical trials for muscular dystrophies. “Pushing the envelope” with this non-enveloped virus has apparently led to a new toxicity from complement activation, which was potentially predictable from nonhuman primate and piglet preclinical data.⁴ While expanding the clinical application of gene therapy is highly desirable (and has been a career-long focus of ours), this must continue to be done prudently

by investigators experienced with both the vectors and the disease states being treated, which sometimes can interact in unpredictable ways.

In spite of these cautions, we are incredibly optimistic as gene therapy enters its fourth decade. The continual advancement of technologies for gene silencing and gene editing and the true maturation of synthetic biology have enabled gene therapy to enter its own Golden Age. We are indeed fortunate to be part of this field at this amazing time.

In our exuberance about the success of the field, we must never forget for whom this work is being done—our patients. As long as we keep the welfare of the patients who are to be the recipients of gene therapy at the center of our will and purpose, we will not fail in this noble endeavor.

Public Acceptability of Gene Therapy and Gene Editing for Human Use: A Systematic Review

Juliette Delhove, Ivana Osenk, Ivanka Prichard, and Martin Donnelley

Pages:20–46

Published Online:5 December 2019

<https://doi.org/10.1089/hum.2019.197>

Abstract

Gene therapy and gene editing technologies are complex and it can be difficult for the public to understand their possible benefits or side effects. However, patient and public support is critical for the successful adoption of any new technology. Given the recent advances in gene therapy and gene editing, their potential clinical benefits, and the significant attention that has been given to the first-known successful attempt at permanent and heritable changes to the human genome, a systematic review was performed to assess beliefs and attitudes toward gene therapy and gene editing for human use, and to highlight the factors that influence acceptability. A systematic search following Preferred Reporting Items for Systematic Reviews and Meta-analyses (PRISMA) guidelines was undertaken in April 2018 to identify articles examining opinions and attitudes regarding the acceptability of gene therapy and gene editing. Overall, 1,561 records were retrieved from 4 databases (Ovid Medline, PsycINFO, Scopus, and Web of Science). Duplicates were removed, and titles and abstracts independently screened, leaving 86 full-text articles assessed for eligibility. Following full-text review, 33 were included, with 5 articles added after forward/backward searching. An additional three articles were added following an updated search in March 2019 (total n=41). Findings from the studies were integrated according to common themes: the impact of demographics; risks versus benefits of success; treatment specifics (e.g., medical vs. other reasons; disease severity and status; somatic vs. germ line; and mode of delivery); moral or ethical issues; and changes with time. In general, perceptions were positive, particularly for medical reasons and fatal diseases, but were also influenced by perceived risk. Somatic therapies had higher levels of acceptability than germ line therapies. While available in various forms, limitations exist in the measurement of perceptions of gene therapy and gene editing.

Treatment acceptability is essential for future clinical trials, so it is important for scientists and clinicians to be clear about the risks and benefits of these technologies, and how these are communicated to the public, while encouraging education about genetic therapies to a broad range of individuals.

Special Feature: Making humanitarian action work for women and girls

by HPN May 2019

The theme of this edition of Humanitarian Exchange, co-edited with Women Deliver, is making humanitarian action work for women and girls. Despite gains, including commitments made at the World Humanitarian Summit, there is still much to be done to address the gendered impacts of humanitarian crises and improve gender-sensitive humanitarian action.

In the lead article, [Jacqueline Paul](#) advocates for feminist humanitarian action based on evidence that improvements in women's socio-economic status can reduce excess mortality among women after shocks. [Jean Kemitare, Juliet Were and Jennate Eoomkham](#) look at the role of local women's rights organisations in preventing and responding to violence against women and girls, and [Marcy Hersh and Diana Abou Abbas](#) highlight opportunities for more concrete action on sexual and reproductive health in emergencies.

Citing experience from Vanuatu, [Jane Newnham](#) explains how women will choose to use contraceptives even during a humanitarian response, when services and counselling are delivered in an appropriate and responsive way. Drawing on experience in Bangladesh, [Tamara Feters and colleagues](#) challenge the belief that abortion is a non-essential service, or too complicated for humanitarian actors to provide. [Darcy Ataman, Shannon Johnson, Justin Cikuru and Jaime Cundy](#) reflect on an innovative programme using music therapy to help survivors of trauma.

[Emilie Rees Smith, Emma Symonds and Lauryn Oates](#) highlight lessons from the STAGE education programme in Afghanistan, and [Degan Ali and Dega Saleh](#) outline how African Development Solutions is helping women and girls take on leadership and decision-making roles in Somalia. [Fiona Samuels and Taveeshi Gupta](#) explore patterns of suicide among young people in Vietnam, with a particular focus on girls, and [Subhashni Raj, Brigitte Labouky and Shantony Moli](#) illustrate the importance of a gendered approach to community-based disaster risk reduction in the South-West Pacific. [Nicola Jones, Workneh Yadete and Kate Pincock](#) draw on research in Ethiopia to explore the gender- and age-specific vulnerabilities of adolescents. The edition ends with an article by [Julie Rialet-Cislaghi](#) on how humanitarian responses can better address child marriage.

Doctors and civil disobedience

The Lancet

Viewpoint

Should health professionals participate in civil disobedience in response to the climate change health emergency?

Hayley Bennett, Alexandra Macmillan, Rhys Jones, Alison Blaiklock, John McMillan

Climate change is a global health emergency and a growing ethical crisis, and well planned climate action brings opportunities to improve health, equity, and human rights. In the face of continued inaction, citizens are turning to civil disobedience to persuade governments to act more urgently. Civil disobedience is public, non-violent action in breach of the law, which is aimed at changing the law or policies of the government. Such action is an act of conscience, and participants accept possible punishment. Health professionals are beginning to advocate for and participate in these actions. Several movements for social change have taken civil disobedience action, but participation by health workers in their professional capacity could involve risks, and relatively little has been written to assist decision making about whether to participate. In this Viewpoint, we apply a framework to guide decision making by considering whether climate change justifies civil disobedience by health professionals as part of our duty of care. The framework comes from a western ethics paradigm, and we acknowledge that many people who relate to this paradigm are relatively protected from early climate–health effects. This protection is not the case for many other people, especially those in climate-vulnerable countries and Indigenous communities. Nonetheless, the framework includes principles that are common currency for health professionals

The impact of unifying agricultural wholesale markets on prices and farmers' profitability

Retsef Levi, Manoj Rajan, Somya Singhvi, and Yanchong Zheng

PNAS first published January 21, 2020. <https://doi.org/10.1073/pnas.1906854117>

Significance

To improve smallholder farmers' welfare, several governments have led reforms in improving market access for these farmers through online agri-platforms. This paper empirically evaluates the impact of such a reform—the Unified Market Platform (UMP) in Karnataka, India—on market prices and farmers' profitability. The analysis shows an average 5.1%, 3.6%, and 3.5% increase in the modal prices of paddy, groundnut, and maize due to UMP. However, the analysis also indicates a lack of statistically significant impact on the modal prices of cotton, green gram, and tur. We provide evidence that commodities with a significant price increase differ from those without systemic features related to logistical challenges, bidding efficiency, in-market concentration, and the price discovery process used.

Universals and variations in moral decisions made in 42 countries by 70,000 participants

Edmond Awad, Sohan Dsouza, Azim Shariff, Iyad Rahwan, and Jean-François Bonnefon

PNAS first published January 21, 2020. <https://doi.org/10.1073/pnas.1911517117>

Significance

We report the largest cross-cultural study of moral preferences in sacrificial dilemmas, that is, the circumstances under which people find it acceptable to sacrifice one life to save several. On the basis of 70,000 responses to three dilemmas, collected in 10 languages and 42 countries, we document a universal qualitative pattern of preferences together with substantial country-level variations in the strength of these preferences. In particular, we document a strong association between low relational mobility (where people are more cautious about not alienating their current social partners) and the

tendency to reject sacrifices for the greater good—which may be explained by the positive social signal sent by such a rejection. We make our dataset publicly available for researchers.

Abstract

When do people find it acceptable to sacrifice one life to save many? Cross-cultural studies suggested a complex pattern of universals and variations in the way people approach this question, but data were often based on small samples from a small number of countries outside of the Western world. Here we analyze responses to three sacrificial dilemmas by 70,000 participants in 10 languages and 42 countries. In every country, the three dilemmas displayed the same qualitative ordering of sacrifice acceptability, suggesting that this ordering is best explained by basic cognitive processes rather than cultural norms. The quantitative acceptability of each sacrifice, however, showed substantial country-level variations. We show that low relational mobility (where people are more cautious about not alienating their current social partners) is strongly associated with the rejection of sacrifices for the greater good (especially for Eastern countries), which may be explained by the signaling value of this rejection. We make our dataset fully available as a public resource for researchers studying universals and variations in human morality.

Stanford Social Innovation Review

Winter 2020 Volume 18, Number 1

https://ssir.org/issue/winter_2020#

Creating lasting social change often requires changing public attitude, not just public policy. Take the movements for marriage equality and against smoking in the United States, for example. Learn the six-step framework that others have used to successfully change public opinion in the cover article "Aspirational Communication" in the Winter 2020 issue of *Stanford Social Innovation Review*.

Torture Journal

2019 Volume 29 - No.3

<https://irct.org/publications/torture-journal/143>

This issue of the Torture Journal takes its focus on measuring torture rehabilitation processes and results. Scientific contributions on this subject include a measurement of rehabilitation outcomes with an instrument designed at the Marjorie Kovler Center in Chicago; a validation study examining diagnoses of Post-Traumatic Stress Disorder (PTSD) and Complex Post-Traumatic Stress Disorder (CPTSD) in refugee and torture survivor populations; and a study of gender-based violence in Honduras, El Salvador and Guatemala.

The issue also comprises an applied perspective on organizational development in torture rehabilitation programs and two letters to the editor addressing involvement of medical personnel in torture in Syria and a response to the concept of psychological torture.

Finally, Secretary-General of the International Rehabilitation Council for Torture Victims, Lisa Henry, and Chief Executive Officer of STARTTS Centre in Australia, Jorge Aroche, provide an open letter to the Torture Journal readers and a celebratory text of STARTTS' 30th anniversary respectively.

New Technologies: Where To?

This issue focuses on new technologies and their potential benefits for humanity as well as their expanding use in advancing the 2030 Agenda. It explores the promise of our digital age, while posing important questions about where these technologies are leading us, and how their misuse could also lead to increased inequality and conflict.

Sustainable Crop Protection, Global Climate Change, Food Security and Safety—Plant Immunity at the Crossroads

by [Marcello Iriti](#) and [Sara Vitalini](#)

Vaccines 2020, 8(1), 42; <https://doi.org/10.3390/vaccines8010042> (registering DOI) - 24 Jan 2020

Abstract

The development of novel strategies of plant disease management is crucial in view of the growing demand of sustainability in agri-food chains. The use of agrochemicals is not without risk for the consumer and environment in terms of their residues in food, feed, water bodies and harmful effects on nontarget organisms. However, because of the high global annual yield losses attributable to plant diseases and also due to global climate changes that have exacerbated some phytosanitary emergencies, chemical input in agriculture is mandatory. In this complex scenario, the use of agrochemicals that boost the plant immune system represents a relatively novel approach in crop protection. These plant protection products are not antimicrobial or fungicidal agents, but include both natural and synthetic elicitors and plant activators that only target the host immune system, with no biocide mechanism of action. In general, these products present a number of strengths: they leave no residue and should not select resistant pathogen strains, they can be used to control virus diseases, and can increase the levels of bioactive phytochemicals in plant food
