The Sentinel

***Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development***

Period ending 05 November 2022 :: Number 437

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted, and the elements of each edition are presented as a set of blog posts at <https://ge2p2-center.net/>. This blog allows full-text searching of over 6,000 entries.

Request email delivery of the pdf:

If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

The Sentinel is a service of the [GE2P2 Global Foundation](#), which is solely responsible for its content. Comments and suggestions should be directed to:

*David R. Curry

[As impacts accelerate, adapting to climate change must become a global priority – UNEP report](#)

- More than eight out of ten parties to UNFCCC have adaptation planning instruments in place
- Estimated adaptation costs are five to ten times greater than international adaptation finance flows to developing countries
- Unprecedented political will and long-term investments in adaptation are urgently needed

Nairobi, 3 November 2022 – As climate impacts intensify across the globe, nations must dramatically increase funding and implementation of actions designed to help vulnerable nations and communities adapt to the climate storm, according to a new United Nations Environment Programme (UNEP) report. Released ahead of COP27 – the latest round of climate talks taking place in Sharm El-Sheikh, Egypt – [**The Adaptation Gap Report 2022: Too Little, Too Slow – Climate adaptation failure puts world at risk**](#), finds that global efforts in adaptation planning, financing and implementation are not keeping pace with the growing risks.

"Adaptation needs in the developing world are set to skyrocket to as much as \$340 billion a year by 2030. Yet adaptation support today stands at less than one-tenth of that amount. The most vulnerable people and communities are paying the price. This is unacceptable," UN Secretary-General António Guterres said in a statement on the release of the Adaptation Gap Report. "Adaptation must be treated with a seriousness that reflects the equal worth of all members of the human family. It's time for a global climate adaptation overhaul that puts aside excuses and picks up the toolbox to fix the problems," he added...

.....

[**Statement: A Message from the Presidents of the U.S. National Academies as COP27 Begins in Egypt**](#)

November 4, 2022

The COP27 climate summit offers an opportunity to make greater progress on transitioning to a low-emissions world while protecting nations and communities that are most affected by the impacts of climate change, as well as maintaining food and water security around the world — both of which are under stress. The summit also can advance innovations in how nations finance climate-resilient development and invest in future energy infrastructure.

We are seeing encouraging signs of progress in reducing greenhouse gas emissions as renewable energy sources become more widely available and affordable, and here in the U.S., the recent passage of historic legislation to incentivize the shift to clean energy should help boost domestic efforts. Nevertheless, our country, along with much of the world, is still lagging behind in reaching critical emission-reduction targets. Without urgent and sustained action, extreme events such as this year's record-breaking heat waves in the U.S., devastating droughts in China and Europe, and deadly floods in Pakistan could become the "new normal," with society's most vulnerable at particular risk.

We call upon world leaders in government, business, and civil society to continue to work together to forge effective and equitable solutions to the climate crisis. At the U.S. National Academies, we are committed to enlisting science, engineering, and medicine to inform these efforts so that together, we can create a more secure, more sustainable, and more prosperous future for all.

Social Media Stewardship

UN Human Rights Chief Türk issues open letter to Twitter's Elon Musk

GENEVA (5 November 2022) – UN High Commissioner for Human Rights Volker Türk on Saturday issued an open letter to Elon Musk, Chief Executive Officer at Twitter, urging him to “ensure human rights are central to the management of Twitter” under Musk’s leadership:

Open Letter from Volker Türk, UN High Commissioner for Human Rights, to Mr. Elon Musk, Chief Executive Officer at Twitter

5 November 2022

Dear Mr. Musk:

Twitter is part of a global revolution that has transformed how we communicate. I value Twitter for what I have learned and been able to share with people all around the world, easily and effectively. But I write with concern and apprehension about our digital public square and Twitter’s role in it.

As the new owner of Twitter, you have enormous responsibilities given the platform’s influential role as a digital space where people discuss their ideas, their worries and their lives. Twitter should be a place that is safe, and where people’s rights are respected. Like all companies, Twitter needs to understand the harms associated with its platform and take steps to address them. Respect for our shared human rights should set the guardrails for the platform’s use and evolution.”

“In short, I urge you to ensure human rights are central to the management of Twitter under your leadership. Reports that Twitter’s entire human rights team and all but two of its ethical AI team have been fired this week are not, from my perspective, an encouraging start.

I wish to share with you and your new team some fundamental principles from a human rights perspective that I would urge be front and centre as you go forward:

[1] Protect free speech across the globe.

In many contexts, Twitter, alongside other social media companies, is being pressed by governments globally to take steps to undermine free speech, whether by taking down content that is entirely legitimate under international standards, or using upload filters. We urge Twitter to respond to such demands by standing up for the rights to privacy and free expression to the full extent possible, under relevant laws, and by transparently, promptly and regularly reporting on Government requests – or pressures – that infringe those rights.

[2] Free speech is not a free pass.

Conversely, viral spread of harmful disinformation, such as we have seen during the Covid-19 pandemic in relation to vaccines, results in real world harms. Twitter has a responsibility to avoid amplifying content that results in harm to other people’s rights.

[3] There is no place for hatred that incites discrimination, hostility or violence on Twitter.

Human rights law is clear – freedom of expression stops at hatred that incites discrimination, hostility or violence. We know from our own investigation that hate speech has spread like wildfire on social media platforms in countries with starkly different cultural, political and religious contexts – with horrific, life-threatening consequences for thousands of people. Twitter’s content moderation policies should continue to bar such hatred on the platform, and every effort needs to be made to remove such content promptly.

[4] Transparency is key.

Research is essential to understand better the impact of social media on our societies. We urge you to maintain access to Twitter's data through its open APIs [application programming interfaces].

[5] Protect privacy.

Free speech depends on effective protection of privacy. It is vital that Twitter refrain from invasive user tracking and amassing related data and that it resist, to the fullest extent possible under applicable laws, unjustified requests from governments for user data. I also urge Twitter to transparently inform users and the public about the steps it takes.

[6] Languages and contextual expertise are not optional.

Twitter's responsibilities to maintain a rights-respecting and safe platform apply not just to English-language content, or in the United States of America, but globally. Twitter should have sufficient content moderation capacity in all the languages and contexts in which it does business.

Twitter's responsibilities to respect human rights, and to address human rights impacts relating to its operations, are set out in more detail in the [UN Guiding Principles on Business and Human Rights](#), and through my Office's [B-Tech project](#) that works to apply those principles in practice within the technology sector. Twitter has been an active participant in the Community of Practice within that project, which we hope will continue.

Twitter has much to offer to our common agenda for a better world, but we need to be clear-eyed as to what is required to make that a reality. In a world as complex as ours has become, our shared human rights offer a unifying way forward. We look forward to working with you.

ENDS

Human Rights – Philanthropy

[New human rights philanthropy report shows encouraging trends, also reveals increased disparities in 2019](#)

2022 report from Candid and Human Rights Funders Network shows that there is room for growth

New York, NY—November 1, 2022. Candid and Human Rights Funders Network (HRFN) today released [Advancing Human Rights: Annual Review of Global Foundation Grantmaking 2019 Key Findings](#). The annual report reveals insights from the most up-to-date, comprehensive data available for global human rights philanthropy.

This year's analysis found that in 2019, 761 funders made over 26,000 human rights grants totaling \$4.1 billion. The report notes: "Human rights funding is a fraction of what's needed – and what's possible."...

Key findings include:

- **Human rights funding continues to increase, but with regional funding disparities.** Over the past decade, we have seen sustained yet diminishing growth in human rights grant dollars. The report documents a 10% increase from 2018 and a 242% increase over the past ten years. At the same time, there are considerable regional disparities, with grants in North America growing at a greater rate than other regions. In Sub-Saharan Africa, funding declined for a second year in a row, and was stagnant the year before that.

- **Funding increased for six of nine populations.** Among funders who shared grants data in 2018 and 2019, support for racial and ethnic groups grew the most. Nearly three out of four funders that fund with a racial or ethnic lens increased their spending. Likewise, persons with disabilities, which saw a decrease in 2018, increased in 2019 by 38%. Funding decreased for three groups: Indigenous peoples, human rights defenders, and children and youth, after growth in each of these areas the previous year.
- **The majority of human rights grants focus on one population.** Seventy-two percent of the human rights grants awarded in 2019 either didn't mention any populations or named just one. Only 28% were intended to benefit more than one population and just 7% reference three or more – for example women of color who identify as LBTQI. This suggests that the bulk of human rights funding is failing to consider intersectional identities or support critical cross-movement work.
- **Funding from foundations in the Global South and East is increasing.** While the proportion of funding that is controlled by Global South and East funders continues to hover at around 1% of total human rights grant dollars, a notable three fourths of these foundations increased their grantmaking since the previous year. Global South and East funders represent a vital source of resourcing for locally-led initiatives, with 93% of grants by these funders staying within these regions.
- **Trust remains an issue.** We continue to see more restricted, less direct funding for grants to the Global South and East. Groups that are awarded human rights grants in North America are five times more likely to receive direct, flexible support than those in Sub-Saharan Africa and seven times more likely than groups in the Caribbean.

Human Rights Funders Network Executive Director Kellea Miller said, "We're encouraged that human rights philanthropy continues to grow. But we can't lose sight of **the fact that human right grants only make up 2–8% of total foundation funding each year**. We hope this report helps funders see the potential to bring more resources to the field. We also hope it helps foundations address the global imbalance in resourcing, increase direct, flexible funding, and adopt an intersectional approach to giving."

[Association between democratic governance and excess mortality during the COVID-19 pandemic: an observational study](#) (29 June, 2022) *Free*

Vageesh Jain, Jonathan Clarke, Thomas Beaney

Abstract

Background

Excess mortality has been used to assess the overall health impact of COVID-19 across countries. Democracies aim to build trust in government and enable checks and balances on decision making, which may be useful in a pandemic. But during the pandemic, they have been criticised as being hesitant to enforce restrictive public health measures.

Methods

Through linking open-access datasets we constructed univariable and multivariable linear regression models investigating the association between country V-Dem Liberal Democracy Indices (LDI), representing strength of democratic governance and excess mortality rates, from January 2020 to

September 2021. We adjusted for several important confounders and conducted a range of sensitivity analyses to assess the robustness of our findings.

Results

Across 78 countries, 4.19 million excess deaths were recorded. On multivariable regression, a one-point increase in V-Dem LDI was associated with a decrease in excess mortality of 2.18 per 100 000 ($p=0.004$), after accounting for age, gender, wealth and universal health coverage. This association was only partially attenuated by COVID-19 vaccination rates and remained robust in all sensitivity analyses.

Conclusions

Democratic governance may have played an important role in mitigating the overall health impact of COVID-19 across countries. This study strengthens the case to broaden the scope of traditional pandemic risk assessment and discussions on preparedness.

[Shared Cultural Ancestry Predicts the Global Diffusion of Democracy](#)

Countries with shared linguistic and religious ancestry have similar democracy outcomes.

Thanos Kyritsis, Luke J. Matthews, David Welch, Quentin D. Atkinson

Abstract

Understanding global variation in democratic outcomes is critical to efforts to promote and sustain democracy today. Here, we use data on the democratic status of 221 modern and historical nations stretching back up to 200 years to show that, particularly over the last 50 years, nations with shared linguistic and, more recently, religious ancestry have more similar democratic outcomes. We also find evidence that for most of the last 50 years the democratic trajectory of a nation can be predicted by the democratic status of its linguistic and, less clearly, religious relatives, years and even decades earlier. These results are broadly consistent across three democracy indicators (Polity 5, Vanhanen's Index of Democracy, and Freedom in the World) and are not explained by geographical proximity or current shared language or religion. Our findings suggest that deep cultural ancestry remains an important force shaping the fortunes of modern nations, at least in part because democratic norms, institutions, and the factors that support them are more likely to diffuse between close cultural relatives.

Weekly Epidemiological and Operational updates

Last update: 04 Nov 2022

Confirmed cases :: 628 694 934

Confirmed deaths :: 6 576 088

Vaccine doses administered: 12 850 970 971

.....

Weekly epidemiological update on COVID-19 - 2 November 2022

Overview

Globally, the number of new weekly cases decreased by 17% during the week of 24 to 30 October 2022, as compared to the previous week, with over 2.3 million new cases reported. The true number of incident cases is likely to be underestimated due to a decline in testing globally. The number of new weekly deaths decreased by 5%, as compared to the previous week, with about 9300 fatalities reported. As of 30 October 2022, 627 million confirmed cases and 6.5 million deaths have been reported globally.

PHEIC **Monkeypox**

Public Health Emergency of International Concern (PHEIC)

<https://www.who.int/emergencies/situations/monkeypox-oubreak-2022>

Multi-country outbreak of monkeypox, External situation report #9 - 2 November 2022

Overview

This is the ninth situation report for the multi-country outbreak of monkeypox, which provides details on the latest epidemiology, updates on clinical care, therapeutics, and key recommendations of third IHR EC meetings. The report also provides an update on the situation in the Region of the Americas.

Risk assessment	Laboratory confirmed cases	Deaths	Countries/ areas/ territories
Global risk – Moderate			
WHO Regional risk	77 264	36	109
<ul style="list-style-type: none"> European Region, Region of the Americas – High African Region, Eastern Mediterranean Region, Southeast Asia Region – Moderate Western Pacific Region – Low 			

Highlights

:: During the week of 17 to 30 October 2022, the number of monkeypox cases reported in the Regions of Europe and the Americas continue to decline, driving the overall downward trend observed since August 2022. The Region of the Americas continues to account for the highest cumulative proportion of monkeypox cases reported globally and the highest proportion of weekly new cases.

:: For strategic planning and global support, WHO is appealing for US\$ 33.82 million (between July 2022 and June 2023) to take immediate action to stop the monkeypox outbreak in collaboration with the Member States, partners, and other stakeholders. The global appeal covers all six WHO regions, with the greatest needs in the African Region, South-East Asia, and the Eastern Mediterranean in the areas of vaccination (34%), surveillance and contact tracing (17%), diagnostics and testing (13%), and risk communication and community engagement (13%)...

[Third meeting of the International Health Regulations \(2005\) \(IHR\) Emergency Committee regarding the multi-country outbreak of monkeypox](#)

1 November 2022 *Statement*

The third meeting of the International Health Regulations (2005) (IHR) Emergency Committee regarding the multi-country outbreak of monkeypox, was held on Thursday, 20 October 2022. The Emergency Committee acknowledged that some progress has been made in the global response to the multi-country outbreak of monkeypox since the last meeting, including the emerging information on the effectiveness of behavioural interventions and vaccines.

The Committee held the consensus view that the event continues to meet the IHR criteria for a Public Health Emergency of International Concern (PHEIC) and highlights the primary reasons for ongoing concern. These include ongoing transmission in some regions, continuing preparedness and response inequity within and between WHO Member States, an emerging potential for greater health impact in vulnerable populations, continuing risk of stigma and discrimination, weak health systems in some developing countries leading to under-reporting, ongoing lack of equitable access to diagnostics, antiviral and vaccines, and research gaps needing to be addressed.

The **WHO Director-General expresses his gratitude to the Chair, Members, and Advisors for their advice and concurs with this advice that the event continues to constitute a PHEIC** for the reasons detailed in the proceedings of the meeting below. The Director-General issues revised Temporary Recommendations in relation to this PHEIC...

Polio

Polio this week as of 02 November 2022 - GPEI

:: Five change-makers in the Eastern Mediterranean's polio eradication programme – the GPEI stands tall on the foundation of million of women's efforts and voices. [More](#).

:: Rotary Institute: Rotarians, stakeholders and partners from around the world are gathering this week in Basel, Switzerland, to discuss 'the future is now', including a lasting polio-free world for all future generations to come. [More](#).

Summary of new polioviruses this week:

- Pakistan: one positive environmental sample
- Mozambique: one WPV1 case and five cVDPV1 cases
- Botswana: one cVDPV2 environmental sample
- Central African Republic: one cVDPV2 environmental sample
- DR Congo: seven cVDPV1 cases and three cVDPV2 cases
- Madagascar: two cVDPV1 cases
- Nigeria: one cVDPV2 case

.....

Statement of the Thirty-third Polio IHR Emergency Committee

1 November 2022

Statement

The thirty-third meeting of the Emergency Committee under the International Health Regulations (2005) (IHR) on the international spread of poliovirus was convened by the WHO Director-General on 12 October 2022 with committee members and advisers attending via video conference, supported by the WHO Secretariat. The Emergency Committee reviewed the data on wild poliovirus (WPV1) and circulating vaccine derived polioviruses (cVDPV) in the context of global eradication of WPV and cessation of outbreaks of cVDPV2 by end of 2023. Technical updates were received about the situation in the following countries and territories: Afghanistan, Algeria, Malawi, Mozambique, Pakistan, the United Kingdom of Great Britain and Northern Ireland, the United States of America and Yemen....

... Conclusion

Although encouraged by the reported progress, the Committee unanimously agreed that the risk of international spread of poliovirus remains a Public Health Emergency of International Concern (PHEIC) and recommended the extension of Temporary Recommendations for a further three months. The Committee recognizes the concerns regarding the lengthy duration of the polio PHEIC and the importance of exploring alternative IHR measures in the future but concluded that there are still significant risks as exemplified by the importation and continued transmission of virus in Malawi and Mozambique. The Committee considered the following factors in reaching this conclusion:

... Based on the current situation regarding WPV1 and cVDPVs, and the reports provided by affected countries, the Director-General accepted the Committee's assessment and on 21 October 2022 determined that the poliovirus situation continues to constitute a PHEIC with respect to WPV1 and cVDPV...

Hunger and malnutrition being driven by climate crisis and conflict in South Sudan

<https://www.unicef.org/press-releases/hunger-and-malnutrition-being-driven-climate-crisis-and-conflict-south-sudan>

JUBA, 3 November 2022 – Hunger and malnutrition are on the rise across the flood, drought, and conflict-affected areas of South Sudan, with some communities likely to face starvation if humanitarian assistance is not sustained and climate adaptation measures are not scaled-up, the United Nations warned today. The latest Integrated Food Security...

Global framework for the response to malaria in urban areas

31 October 2022

Report of the fourth meeting of the WHO Diagnostic Technical Advisory Group for Neglected Tropical Diseases:...

31 October 2022

Setting global research priorities for urban health

Overview

By 2050, more than two thirds of the world's population will live in urban areas, presenting governments and city authorities with the daunting challenge of ensuring citizens have equitable access to safe and sustainable transport systems, green spaces, and healthy, sustainable living and working environments. To be able to meet this challenge, Member States and nongovernmental organizations have called on WHO to support implementation of effective multisectoral interventions to improve the health of urban residents. In response, WHO has developed the Urban Health Research Agenda (UHRA) – a set of global urban health research priorities for 2022–2032.

The Sustainable Development Goals Report 2022

7 July 2022 - The Sustainable Development Goals Report 2022 reviews progress of the 2030 Agenda for Sustainable Development, using the latest available data and estimates to track global progress of the 17 Goals with in-depth analysis of selected indicators for each Goal. The Report highlights the severity and magnitude of the challenges before us. The confluence of crises, dominated by COVID-19, climate change, and conflicts, are creating spin-off impacts on food and nutrition, health, education, the environment, and peace and security, and affecting all the SDGs.

4 things you should know about UN DESA's SDG Pavilion at COP27

4 November 2022 - Our world is on fire; drying up and flooding – all at the very same time. The climate crisis is a reality and the need for action is more urgent than ever. To navigate our way out of this dangerous predicament, the global community has the 17 Sustainable Development Goals (SDGs). At the SDG Pavilion at COP27, UN DESA will showcase how the goals can make all the difference. Here are 4 things you should know.

[DDG Paugam: More collective efforts needed to address food crisis](#)

3 November 2022

In a speech delivered at the Organisation for Economic Co-operation and Development meeting of Agriculture Ministers on 3 November, Deputy Director-General Jean-Marie Paugam said collective efforts by the WTO and other international organizations have helped alleviate upward pressure on food prices, but more efforts were needed to tackle the crisis ahead. He also warned that the use of export restrictions on food were spreading to products beyond oilseeds and grains and that their application beyond strict emergency situations could become a concern. His remarks are below.

Global health agencies outline plan to support Ugandan government-led response to outbreak of Ebola virus disease

3 November 2022 – Following the declaration of an Ebola outbreak in Uganda on 20 September 2022, the outbreak has now spread to seven districts (Kasanda, Kyegegwa, Bunyangabu and Kagadi districts beyond the original epicenter in Mubende district, and then to Kampala City and Wakiso). The government-led response has activated the Incident Management System in order to control the outbreak. In support of the Ministry of Health-led efforts, CEPI, Gavi and WHO have outlined a plan to accelerate research during the outbreak, to ensure access to investigational doses, and to facilitate scaling up and access to any subsequent licensed vaccine.

[Webinar "A fundamental change – climate change and humanitarian action #2"](#)

Le 03/11/2022 - Place : Online, Zoom

The new reality of climate change requires the humanitarian sector to fundamentally adapt. However, practice shows that it is extremely difficult to move towards a more sustainable mindset and humanitarian practice. So: what is holding us back? And how can we overcome these barriers?

International Humanitarian Studies Association [to 05 Nov 2022]

<https://ihsa.info/>

Weekly humanitarian blog posts selection

Climate change, food crisis and migration

24 – 30 October

This week we feature climate change, food crisis, and migration. Climate change adds to existing political and social pressures for agro-pastoralist women and girls in East Africa. Climate-related displacement brings its own challenges. One post argues that shifting to long-term integrated planning is needed to enhance the resilience of poor and vulnerable people to climate change.

More than 1 million people are internally displaced in Somalia, highlighting the urgency for the world to wake up and start providing the aid needed. Lessons learnt on disaster preparedness and response in Ethiopia could help in the response to Somalia's famine.

On migration, we include articles on the Biden administration's border expulsion policy, and how the 2018 Global Compact for Safe Orderly and Regular Migration can address migrants going missing or dying. Finally, we highlight blogs on the feasibility of conflict prediction models for anticipatory action and how to protect private humanitarian data.

Unitaid to address intellectual property-related barriers for broader access to health technologies with new call for proposals

Submissions are welcomed until 1 February 2023 at 12:00 (noon) CET.

Intellectual property rights are an important incentivizing mechanism to accelerate the development of innovations to respond to global health challenges. But while they can be effective in stimulating and rewarding innovation in global health, they can also contribute to inequitable access to new products, as has been increasingly recognized over the course of the COVID-19 pandemic.

TRIPS flexibilities – legal mechanisms allowing countries to overcome or reduce the potential negative impact of patents in response to specific public health needs – are intended to address equity barriers.

Unitaid seeks to fund projects that will support the use of TRIPS flexibilities and other solutions to prevent or remove unwarranted intellectual property barriers. Unitaid is particularly interested in ensuring the availability and affordability of health products for HIV, tuberculosis, hepatitis C, and other diseases and conditions outlined in the 2023-2027 Strategy...

Half of All Hospitals Have Charity Care Costs That Represent 1.4% or Less of Their Operating Expenses

November 3, 2022 News Release

Half of hospitals reported that the cost of providing charity care to patients represented 1.4% or less of their operating expenses in 2020, though the rates vary widely from hospital to hospital, a new KFF analysis finds. Based on a review of hospital cost report data, the analysis finds some...

Most Women are in Favor of Making Birth Control Pills Available Over the Counter without a Prescription if Research Shows they are Safe and Effective

November 3, 2022 News Release

A new KFF survey finds that more than three-quarters (77%) of females ages 18-49 favor making birth control pills available without a doctor's prescription if research shows they are safe and effective. Among those who favor making birth control pills available over the counter and who currently use prescription oral...

Two New KFF Analyses Show That a Relatively Small Share of Medicare Beneficiaries Compared Plan Options Or Switched Plans During a Recent Open Enrollment Period

November 1, 2022 News Release

As Medicare's annual open enrollment period gets underway, two new analyses from KFF suggest that a relatively small share of the nation's 65 million Medicare beneficiaries will shop around among the many coverage options for 2023 or switch plans. That decision could have a significant impact on enrollees' coverage and...

Revamping Nigeria's Economy: A Report

November 2, 2022

Grantee Research

Despite having the largest economy in Africa, Nigeria faces a tumultuous economic outlook and low levels of inclusive development, with life expectancy at birth for Nigerians hovering at 52.7 years. In its inaugural report, "[Options for Revamping Nigeria's Economy](#)," MacArthur-supported and Abuja-based think tank Agora Policy examines critical challenges facing the Nigerian economy in the lead-up to the

2023 national elections and makes key recommendations for reforms, including ending petrol subsidies, boosting tax revenue, tackling corruption at the ports, and scaling up social investment programs to help address extreme poverty.

This is the first in a series of reports from the Agora Policy supported by MacArthur, focusing on security, gender and social inclusion, and transparency and accountability in the country.

Funding Tomorrow's Public Square

November 2, 2022

In 2020, to help address the urgent need to expand the range of voices centered and celebrated in our public spaces, Mellon President Dr. Elizabeth Alexander conceived of and launched Humanities in Place, which marked the first newly established program area at the Foundation in more than 30 years. Recently, we sat down with program team members to learn more about their process—and what it takes to fund a just and vibrant public square.

AMA Journal of Ethics

Volume 24, Number 10: E913-1027 Oct 2022

<https://journalofethics.ama-assn.org/issue/health-care-waste>

Health Care Waste

Most health care generated waste is not hazardous, but it is voluminous. Health care organizations have obligations to manage waste in ways that minimize environmental impact and express their status as good citizens of their global, domestic, and regional communities. Resource-rich countries generate on average more than double the amount of hazardous waste per bed per day than resource-poor countries, and waste processing is concentrated in minoritized communities nearly everywhere. Segregating waste and reducing overall volume are key to curbing primary and secondary emissions that contaminate air and water. Decarbonization and moving the health care sector to net-zero emissions are key expressions of sincerity about motivating health equity.

Anti-Trafficking Review

No. 19 (2022)

<https://antitraffickingreview.org/index.php/atrjournal/issue/view/30>

Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.

Special Issue – Migration, Sexuality, and Gender Identity

Over the past decade, there has been growing recognition of LGBTI+ people's specific experiences with migration, asylum, informal labour, exploitation, and community-building away from home.

This Special Issue of *Anti-Trafficking Review* contributes to this literature with new conceptual and empirical research from countries across Asia, Europe, Africa, and the Americas. In highlighting the fluidity of sexuality and gender identity, the issue also expands our understanding of how survival is waged in the worlds of migration and informal labour.

Forced Migration Review (FMR)

FMR 70 September 2022

<https://www.fmreview.org/issue70>

Knowledge, voice and power

People with lived experience of displacement need to be heard. Their perspectives, strategies and solutions should be at the centre of discussions about policy and practice. The authors in this issue reflect on progress made but also on the road still to travel. They challenge attitudes, highlight injustices and make practical recommendations for change.

We are very grateful to the Local Engagement Refugee Research Network (LERRN) for their partnership on this issue and for the generous financial support of both the International Development Research Centre of the Government of Canada and LERRN (funded by the Social Sciences and Humanities Research Council (SSHRC)).

Forced Migration Review issue 70 includes a major feature on 'Knowledge, voice and power' exploring issues of representation, influence, privilege, access, discrimination and more.

The issue also includes a feature on 'Social cohesion in refugee-hosting contexts', exploring the role of social cohesion in contexts of protracted displacement, with a particular focus on Kenya and Lebanon. It has been produced with the financial support of the Arts and Humanities Research Council, the Foreign, Commonwealth and Development Office, and the Jesuit Refugee Service.

Israel: High Court of Justice Dismisses Petitions Against Biometric Database but Leaves Open Possibility for Future Adjudication

On July 12, 2022, Israel's High Court of Justice dismissed petitions to invalidate the operation of Israel's biometric database. The biometric database was established in accordance with the Inclusion of Biometric Means of Identification and Biometric Identification Data in Identification Documents and in a Database Law, 5770-2010, as amended. This law authorizes collecting biometric identification ...

[Improving screening and treatment for infectious diseases in migrant populations](#)

Christina Greenaway, MD, MSc, Sally Hargreaves, PhD
Journal of Travel Medicine, Volume 29, Issue 7, October 2022, taac115,
<https://doi.org/10.1093/jtm/taac115>

Many migrants living in high-income countries have increased morbidity and mortality due to undetected and untreated infections. Improving and strengthening the care continuum (screening and linkage to care and treatment) and building migrant-friendly health systems that improve access to care will be required to address this health disparity.

Scientists and scientific organizations need to play a greater role in science diplomacy

Peter D. Gluckman

| published 01 Nov 2022 PLOS Biology

<https://doi.org/10.1371/journal.pbio.3001848>

Science diplomacy—the use of science to advance diplomatic goals—is critical for addressing challenges to the global commons such as climate change and pandemics. Beyond the formal processes of science diplomacy, scientists and scientific organizations can play important informal diplomatic roles.

Exome-wide association study to identify rare variants influencing COVID-19 outcomes: Results from the Host Genetics Initiative

Guillaume Butler-Laporte, et al.

Research Article | published 03 Nov 2022 PLOS Genetics

<https://doi.org/10.1371/journal.pgen.1010367>

Abstract

Host genetics is a key determinant of COVID-19 outcomes. Previously, the COVID-19 Host Genetics Initiative genome-wide association study used common variants to identify multiple loci associated with COVID-19 outcomes. However, variants with the largest impact on COVID-19 outcomes are expected to be rare in the population. Hence, studying rare variants may provide additional insights into disease susceptibility and pathogenesis, thereby informing therapeutics development. Here, we combined whole-exome and whole-genome sequencing from 21 cohorts across 12 countries and performed rare variant exome-wide burden analyses for COVID-19 outcomes. In an analysis of 5,085 severe disease cases and 571,737 controls, we observed that carrying a rare deleterious variant in the SARS-CoV-2 sensor toll-like receptor TLR7 (on chromosome X) was associated with a 5.3-fold increase in severe disease (95% CI: 2.75–10.05, $p = 5.41 \times 10^{-7}$). This association was consistent across sexes. These results further support TLR7 as a genetic determinant of severe disease and suggest that larger studies on rare variants influencing COVID-19 outcomes could provide additional insights.

Author summary

COVID-19 clinical outcomes vary immensely, but a patient's genetic make-up is an important determinant of how they will fare against the virus. While many genetic variants commonly found in the populations were previously found to be contributing to more severe disease by the COVID-19 Host Genetics Initiative, it isn't clear if more rare variants found in less individuals could also play a role. This is important because genetic variants with the largest impact on COVID-19 severity are expected to be rarely found in the population, and these rare variants require different technologies to be studied (usually whole-exome or whole-genome sequencing). Here, we combined sequencing results from 21 cohorts across 12 countries to perform a rare variant association study. In an analysis comprising 5,085 participants with severe COVID-19 and 571,737 controls, we found that the gene for toll-like receptor 7 (TLR7) on chromosome X was an important determinant of severe COVID-19. Importantly, despite being found on a sex chromosome, this observation was consistent across both sexes.

uncorrected proof.

Author summary

Within 5 months, an emerging human monkeypox virus (MPXV) pandemic has caused >65,000 cases, leading the World Health Organization to declare it a public health emergency of international concern (PHEIC). Applying former United States Secretary of Defense Donald Rumsfeld's idiom, we reflect upon the "known knowns," "known unknowns," and "unknown unknowns" to improve prevention and treatment for this and future pandemics.

[Observing many researchers using the same data and hypothesis reveals a hidden universe of uncertainty](#)

Nate Breznau, Eike Mark Rinke, [...] Tomasz Żółtak

Abstract

This study explores how researchers' analytical choices affect the reliability of scientific findings. Most discussions of reliability problems in science focus on systematic biases. We broaden the lens to emphasize the idiosyncrasy of conscious and unconscious decisions that researchers make during data analysis. We coordinated 161 researchers in 73 research teams and observed their research decisions as they used the same data to independently test the same prominent social science hypothesis: that greater immigration reduces support for social policies among the public. In this typical case of social science research, research teams reported both widely diverging numerical findings and substantive conclusions despite identical start conditions. Researchers' expertise, prior beliefs, and expectations barely predict the wide variation in research outcomes. More than 95% of the total variance in numerical results remains unexplained even after qualitative coding of all identifiable decisions in each team's workflow. This reveals a universe of uncertainty that remains hidden when considering a single study in isolation. The idiosyncratic nature of how researchers' results and conclusions varied is a previously underappreciated explanation for why many scientific hypotheses remain contested. These results call for greater epistemic humility and clarity in reporting scientific findings.
