The Sentinel

***Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development***

Period ending 28 January 2023 :: Number 447

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted, and the elements of each edition are presented as a set of blog posts at <https://ge2p2-center.net/>. This blog allows full-text searching of over 6,000 entries.

Request email delivery of the pdf:

If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

The Sentinel is a service of the [GE2P2 Global Foundation](#), which is solely responsible for its content. Comments and suggestions should be directed to:

Afghanistan – Scholarship, Education

Statements, offers of assistance and resources on the scholars in Afghanistan

24.01.2023

ISC /International Science Council 24.01.2023

The International Science Council deplores the exclusion of women from university education in Afghanistan and urges the Afghan authorities to reverse their decision. [This page](#) serves to assist ISC Members and the scientific community in supporting Afghani women and girls in meeting their aspirations through education and engagement with science.

.....

ISC Statement on Afghanistan

2 January 2023

Paris, France

The International Science Council is deeply saddened by the recent decision of the authorities in Afghanistan to ban women from participating in university-level education. This measure, the latest in a series of negative actions affecting the ability of Afghani women and girls to participate in education, is at odds with both the Sustainable Development Goals and the Universal Declaration of Human Rights, which entrench the basic moral requirement for equity and the entitlement to education.

Education is critical to the social, cultural and economic progress of any country and to the wellbeing of its citizens. As societies have empowered and included women and girls in their education and science systems, so too have those countries achieved better social, health and economic outcomes. The decision to exclude Afghani women from university-level education will impede the social, cultural and economic development of Afghanistan.

Knowledge derived from scientific research is fundamental to human progress and creativity. Education allows the benefits of knowledge to be universally shared. More generally, education helps ensure that the application of science contributes productively to all societies.

The International Science Council is fully committed to promoting equitable access to education and participation in science in all societies irrespective of their political structure. It urges the authorities to reverse their decision on excluding women from university education. The Council stands ready to support Afghani women and girls in meeting their aspirations through education and engagement with science and invites the Afghan authorities to meet with us to further this goal.

*Sir Peter Gluckman, President, International Science Council
Dr Salvatore Aricò, CEO, International Science Council

Trafficking in Persons

UNODC global report on trafficking in persons: crises shift trafficking patterns and hinder victim identification

24/01/2023

Fewer victims of trafficking in persons are being identified even as the COVID-19 pandemic and other crises are increasing vulnerabilities to exploitation, according to the latest [Global Report on Trafficking in Persons](#) launched today by UNODC.

The number of victims detected globally fell by 11 per cent in 2020 from the previous year, driven by fewer detections in low- and medium-income countries. The pandemic, in addition to reducing opportunities for traffickers to operate, may have weakened law enforcement capacities to detect victims.

"This latest report shows how **the pandemic has increased vulnerabilities to trafficking in persons, further undercutting capacities to rescue victims and bring criminals to justice,**" said UNODC Executive Director Ghada Waly. "We cannot allow crises to compound exploitation. The UN and the donor community need to support national authorities, most of all in developing countries, to respond to trafficking threats, and to identify and protect victims especially in states of emergency."

The seventh UNODC Global Report on Trafficking in Persons covers 141 countries and provides an overview of patterns and flows of trafficking in persons at global, regional and national levels, based on trafficking cases detected between 2017 and 2021. The findings are further informed by analysis of 800 court case summaries and accompanied by detailed suggestions to policy makers to help formulate effective responses...

Food Sovereignty

DAKAR DECLARATION ON FOOD SOVEREIGNTY AND RESILIENCE (DAKAR2)

Dakar, Senegal January 27, 2023

The Dakar 2 Summit—under the theme '*Feed Africa: food sovereignty and resilience*'—adopted a [Declaration](#) on the implementation of the Summit's resolution, to be submitted to the African Union.

Media Release

Dakar 2 Summit: Development partners to commit \$30 billion to boost food production in Africa

27-Jan-2023 - The second Africa food summit in Senegal ended on Friday, with development partners agreeing to commit \$30 billion to back the continent's resolve to boost agricultural productivity and become a breadbasket for the world.

Among the development partners are the African Development Bank which plans to contribute \$10 billion over five years, and the Islamic Development Bank, which intends to provide \$5 billion...

In the *Dakar Declaration*, **the leaders agreed to allocate at least 10% of public expenditure to increase funding for agriculture.** They also resolved to deploy robust production packages to boost productivity and increase resilience to achieve food security and self-sufficiency....

Development Finance Institutions [DFI]

DFI Transparency Index 2023

25 Jan 2023 – Launch of the first DFI Transparency Index, a comparative measure of the transparency of the world's leading Development Finance Institutions (DFIs) examining the transparency of 30 DFI operations, with combined assets of \$2 trillion.

PDF: <https://www.publishwhatyoufund.org/download/2023-dfi-transparency-index-report/?tmstv=1674124578>

Media Release

\$2 trillion in public assets but little transparency

By Gary Forster and Paul James | Jan 25, 2023 |

The first ever ranking of the transparency of development finance institutions (DFIs) highlights a **startling lack of public disclosure**.

The inaugural edition of the DFI Transparency Index examines the transparency of 30 DFI operations, with combined assets of \$2 trillion. The report reveals that:

- **Across the board DFIs are insufficiently transparent.** This is especially the case for non-sovereign (private sector) operations.
- Critically, **DFIs are not providing evidence of impact, data regarding mobilisation, or proof of accountability to communities.** The lack of disclosure around results and mobilisation limits the ability of stakeholders to ensure that DFIs are investing in the most impactful ways and mobilising private finance efficiently.
- **For many DFIs, even basic information about their investments is not publicly available.**
- But progress is being made. Many of the DFIs included in the Index have committed time and resources to improving the transparency of their operations, using Publish What You Fund's DFI Transparency Tool.
- **The International Finance Corporation (IFC) was ranked as the most transparent non-sovereign (private sector) DFI** in the assessment, scoring 54.4 out of 100. The rest of the top five positions in the non-sovereign assessment were filled by the African Development Bank (AfDB), Asian Development Bank (AsDB), European Bank for Reconstruction and Development (EBRD), and IDB Invest.
- **The AsDB was ranked as the most transparent DFI in the analysis of sovereign (public sector) operations,** scoring 75.9 out of 100. The rest of the top five positions in the sovereign assessment were filled by AfDB, the Inter-American Development Bank (IDB), EBRD and the Asian Infrastructure Investment Bank (AIIB).
- The US International Development Finance Corporation (DFC) was the top ranking bilateral DFI...

Paul James, who researched and authored the report, said: "Multilateral and bilateral development banks are operating in the face of mounting and urgent global crises – from health to debt, food to climate. \$2.4 trillion needs to be mobilised each year for climate finance alone, according to recent estimates. So it's crucial that the investments of our financial institutions have the desired impact, and are effective in mobilising greater investments. The lack of transparency that the Index found on these issues is concerning. But we're hopeful that DFIs will take on the actions we have highlighted and work with us to improve their transparency."...

The Index report makes five main recommendations for DFIs to improve their transparency, including:

- Report impact data
- Publish disaggregated mobilisation data
- Improve transparency around assurance of disclosure to project affected people
- Disclose high risk financial intermediary sub-investments
- Increase standardisation of data

Sena, Thed van Leeuwen, Clare L. Arden, Isabel O. L. Bacellar, Nancy Camack, Marcos Britto Correa, Roberto Buccione, Maximiliano Sergio Cenci, Dean A. Fergusson, Cassandra Gould van Praag, Michael M. Hoffman, Renata Moraes Bielemann, Ugo Moschini, Mauro Paschetta, Valentina Pasquale, Valeria E. Rac, Dylan Roskams-Edris, Hermann M. Schatzl, Jo Anne Stratton, David Moher

Consensus View | published 24 Jan 2023 PLOS Biology

<https://doi.org/10.1371/journal.pbio.3001949>

Abstract

The state of open science needs to be monitored to track changes over time and identify areas to create interventions to drive improvements. In order to monitor open science practices, they first need to be well defined and operationalized. **To reach consensus on what open science practices to monitor at biomedical research institutions, we conducted a modified 3-round Delphi study.** Participants were research administrators, researchers, specialists in dedicated open science roles, and librarians. In rounds 1 and 2, participants completed an online survey evaluating a set of potential open science practices, and for round 3, we hosted two half-day virtual meetings to discuss and vote on items that had not reached consensus. **Ultimately, participants reached consensus on 19 open science practices.** This core set of open science practices will form the foundation for institutional dashboards and may also be of value for the development of policy, education, and interventions.

Box 1. Summary of key points

- Funders and other stakeholders in the international research ecosystem are increasingly introducing mandates and guidelines to encourage open science practices.
- Research institutions cannot currently monitor compliance with open science practices without engaging in time-consuming manual processes that many lack the expertise to undertake.
- We conducted an international Delphi study to agree which open science practices would be valuable for research institutions to monitor, with a view to creating an automated dashboard to support monitoring.
- **We report 19 open science practices that reached consensus for institutional monitoring in an open science dashboard and describe how we intend to implement these.**
- The open science practices identified may be of broader value for developing policy, education, and interventions.

Conclusions

This Consensus View aimed to establish a core set of open science practices to monitor at biomedical institutions. The core set of practices was developed to inform items to track in a proposed automated open science dashboard, which could be deployed by institutions and report aggregated institutional-level information on performance for each practice included. The value of a consensus list of open science practices may be of broad value when developing policy, education, and interventions to improve open science in biomedicine.

Through consulting with 80 stakeholders from 20 institutions, consensus was reached on the value of tracking 19 practices in the proposed dashboard. By taking the approach of consulting the community and building consensus on the practices to include in the dashboard, we intend to develop a dashboard that best meets the needs of the community. By bringing the community together prior to developing the tool, we have also had the opportunity to brainstorm and discuss implementation strategies. We now have a roadmap to guide how to obtain community feedback on a prototype of the dashboard and a plan to pilot implementation at 3 institutions. This pilot and implementation exercise will position us to better understand barriers and enablers to adoption and use of the proposed open science dashboard [28].

Center for Global Development - WORKING PAPER 630

January 25, 2023 :: 27 pages

PDF: <https://www.cgdev.org/sites/default/files/ultimate-resource-peaking.pdf>

Globally, we are making fewer potential innovators. To extend our two-century era of comparatively rapid progress, we need radically reduced discrimination in the global opportunity to innovate.

Abstract

Julian Simon argued that more people were associated with more prosperity: human talents were the “ultimate resource” and the force behind rising living standards. The last 30 years have been consistent with that view. But, globally, we are making fewer workers—and, more importantly, fewer potential innovators. In rich countries, human capital is growing considerably more slowly than in the past. Meanwhile innovation per researcher appears to be dropping as the population of researchers ages, while it takes longer to get to the knowledge frontier and more collaboration to expand it. Combined with the fact we are increasingly intolerant of risk and increasingly desirous of innovations in sectors where it is particularly hard to increase productivity, it is little surprise that productivity growth is indeed declining. To extend our two-century era of comparatively rapid progress, we need radically reduced discrimination in the global opportunity to innovate.

[NIH launches intramural bioengineering center to foster technology collaboration across the agency](#)

NIH-wide resource will champion diversity, equity, inclusion and accessibility.

January 25, 2023 —

The National Institute of Biomedical Imaging and Bioengineering (NIBIB) has established the Center for Biomedical Engineering Technology Acceleration (BETA Center), a new intramural research program to solve a range of medicine's most pressing problems. The BETA Center will serve the wider NIH intramural research program as a biotechnology resource and catalyst for NIH research discoveries.

The center will incorporate a focused engineering approach to accelerate the development, validation and dissemination of cutting-edge technologies. Areas of emphasis will include biomedical imaging, biosensing, engineered and synthetic biology, nanomaterials and biomaterials, artificial intelligence, modeling, computation and informatics. A unique feature of the center will be its ability to rapidly assemble expert teams for purpose-driven technology development to address urgent national and global health needs.

"The BETA Center will be a catalyst for innovation and collaboration," said NIBIB Director Bruce J. Tromberg, Ph.D. "Engineering and technology development are central to everything that NIH does. New tech drives new biomedical discoveries, and new discoveries are transformed into cutting-edge methods, devices and knowledge that can be widely disseminated."

A fundamental objective of the BETA Center is to expand diversity, equity, inclusion and accessibility (DEIA) at NIBIB, building on the inherent interdisciplinary nature of biomedical engineering...

Improving health through convergence science: reimagining our approach to solving the world's biggest challenges

Victor J Dzau, Jenna L Ogilvie, Michael McGinnis

Published: 02 March 2022

The three existential crises of our time—pandemic illnesses, including COVID-19; the impacts of climate change; and glaring and persistent health inequities rooted in centuries of structural racism—all devastating to human health—reflect a new reality that science and health must confront head on. The challenges society faces now, and the new crises that lie ahead, are increasingly complex and multifaceted, crossing disciplines, sectors, and geographies. Although the health impacts, individually and collectively, are stunning, responsibility for solving these challenges lies far beyond the health and medical arena. They are fundamentally connected to changes in our environment, our communities, our cultures, how we live and work, and society writ large.

Weekly epidemiological update on COVID-19 - 25 January 2023

Overview

Globally, nearly 1.9 million new cases and over 12 000 deaths were reported in the week of 16 to 22 January 2023. In the last 28 days (26 December 2022 to 22 January 2023), over 11 million cases and over 55 000 new deaths were reported globally – a decrease of 25% and an increase of 13%, respectively, compared to the previous 28 days. As of 22 January 2023, over 664 million confirmed cases and over 6.7 million deaths have been reported globally...

Figure 1. COVID-19 cases reported weekly by WHO Region, and global deaths, as of 22 January 2023**

Note: Figure 1 does not yet include 72 596 COVID-19-related hospital deaths announced by China (excluding Hong Kong SAR, Macao SAR, and Taiwan) for the period of 8 December 2022 to 19 January 2023.

Polio

Polio this week as of 18 January 2023 - GPEI

:: 2023 is a critical year for the global effort to eradicate polio. It is the year when all remaining poliovirus transmission globally is slated to be fully interrupted, per the GPEI Polio Eradication Strategy 2022-2026. A unique epidemiological window of opportunity is presenting itself at the start of the year, that we must capitalize on. So what is the programme's focus for achieving success this year? The answer is: reaching zero-dose children in the most consequential geographies. [Read more...](#)

:: Last year was a defining one for the polio programme particularly in the Eastern Mediterranean Region with an increase in new cases in Pakistan and a need to focus on vaccinating children in consequential geographies. [This infographic](#) provides a summary of the events and outbreaks that occurred in the region.

:: Approximately 575 million doses of nOPV2 have been administered to date, in 26 countries, since rollout of the vaccine began in March 2021. In 2022 alone, 385 million doses were administered, across 22 countries.

Summary of new polioviruses this week:

- Afghanistan: three WPV1 positive environmental samples
- Pakistan: one WPV1 positive environmental sample
- Botswana: one cVDPV2 positive environmental sample
- Canada: two cVDPV2 positive environmental samples
- Malawi: one cVDPV1 case
- Mozambique: one cVDPV1 case
- Nigeria: six cVDPV2 positive environmental samples

WHO African Region

[:: Africa emerges from holiday travel season with low number of COVID-19 cases](#)

26 January 2023 Brazzaville – Africa is emerging from the New Year travel season without a significant upsurge in COVID-19 for the first time since the start of the pandemic.

A total of 20 552 new cases were recorded in the first three weeks of January 2023, a 97% slump compared with the same period last year despite an uptick in cases in South Africa, Tunisia and Zambia over the past two weeks. The drop in reported new cases may be partially due to low COVID-19 testing rates, but of critical importance is that hospitalization for severe illness, as well as deaths have reduced significantly. As of 22 January 2023, there were 88 COVID-19-associated deaths reported in the region compared with 9096 in the same period 2022...

[**The Sustainable Development Goals Report 2022**](#)

7 July 2022 - The Sustainable Development Goals Report 2022 reviews progress of the 2030 Agenda for Sustainable Development, using the latest available data and estimates to track global progress of the 17 Goals with in-depth analysis of selected indicators for each Goal. The Report highlights the severity and magnitude of the challenges before us. The confluence of crises, dominated by COVID-19, climate change, and conflicts, are creating spin-off impacts on food and nutrition, health, education, the environment, and peace and security, and affecting all the SDGs.

Confluence of multiple crises unleashes one of the lowest global economic growth rates in recent decades, according to UN flagship report

25 January 2023 - A series of severe and mutually reinforcing shocks — the COVID-19 pandemic, the war in Ukraine and resulting food and energy crises, surging inflation, debt tightening, as well as the climate emergency — battered the world economy in 2022. Against this backdrop, world output growth is projected to decelerate from an estimated 3.0 per cent in 2022 to 1.9 per cent in 2023...

[International treaty on protecting biodiversity through the Biosafety Protocol will mark its twentieth anniversary this year](#)

Montreal – 29 January 2023 – Twenty-three years ago, on 29 January 2000, Parties to the Convention on Biological Diversity (CBD) adopted the Cartagena Protocol on Biosafety. The Cartagena Protocol entered into force on 11 September 2003. This year will mark the celebration of the twentieth anniversary of the entry into force of the Cartagena Protocol on Biosafety. The anniversary theme is: 20 Years of Promoting the Safety in the Use of Biotechnology.

The Cartagena Protocol is a milestone achievement under the Convention on Biological Diversity, making a significant contribution to protecting biodiversity by requiring the safe transfer, handling and use of living modified organisms (LMOs) resulting from modern biotechnology. To date, 173 States and the European Union have become Parties to the Cartagena Protocol.

The 10th Conference of the Parties serving as the meeting of the Parties to the UN Cartagena Protocol on Biosafety (COP-MOP 10) adopted the Implementation Plan for the Cartagena Protocol for the period up to 2030. The Implementation Plan, consisting of goals, objectives, indicators, and outcomes, will help guide Parties in their implementation of the Protocol and measure progress...

Statement by Administrator Samantha Power on the Twentieth Anniversary of the President's Emergency Plan for AIDS Relief

January 28, 2023

STATEMENT BY ADMINISTRATOR SAMANTHA POWER - In 2003, UNAIDS and the World Health Organization estimated that up to 45 million people around the world were infected with HIV. Close to 19 million – or more than a third – of those patients lived in sub-Saharan Africa. Yet even though the first antiretroviral treatment that stopped AIDS from multiplying had been discovered over 15 years before, only 50,000 people across Africa could access this treatment. That year, more than two million died of AIDS in sub-Saharan Africa alone – up to two out of every three AIDS-related deaths around the world.

USAID Providing an Additional \$75 Million in Humanitarian Assistance to Rohingya Refugees and Bangladeshi Host Community

January 25, 2023

The U.S. Agency for International Development (USAID) is providing an additional \$75 million in humanitarian assistance to help vulnerable Rohingya refugees in Cox's Bazar and members of the Bangladeshi host community meet ongoing needs that have been exacerbated by the increasing costs of food and fuel.

United States Provides Additional \$56.5 Million for Urgent Humanitarian Needs in Haiti

January 24, 2023

Today, USAID Deputy Administrator Isobel Coleman announced the United States, through the U.S. Agency for International Development (USAID), is providing an additional \$56.5 million for the people of Haiti in response to the country's humanitarian crisis and cholera epidemic. Haiti's alarming levels of gang violence, including attacks on civilians, have prevented people from accessing critical food, fuel, safe drinking water, and other basic supplies.

Pandemic shock must propel stronger health systems in Latin America and the Caribbean

Region had one of the highest global rates of deaths and excess mortality due to COVID-19. Lessons learned from the pandemic can be catalyzed into broader health reforms.

Santiago, Chile, January 24, 2023 – Strengthening health systems in Latin America and the Caribbean in the wake of COVID-19 must be a priority, according to a new World Bank publication entitled “Building Resilient Health Systems in Latin America and the Caribbean: Lessons Learned from the COVID-19 Pandemic”. Investing in cost-effective interventions such as high-performing primary health care and better public health surveillance systems can build resilience against future pandemics. More investments are also needed to address pressures on health care services exacerbated by COVID-19, including mental health services, and to lay the ground for better human development outcomes and economic growth.

COVID-19 Vaccine Delivery Partnership boosts Sierra Leone COVID-19 Vaccination with US\$ 2.8 million worth donation

- COVID-19 Vaccine Delivery Partnership, (CoVDP) has handed over vehicles, motorbikes and computers worth of US\$ 2.8M to support Sierra Leone Vaccination efforts.
- The additional support is aimed at enabling country further to scale up COVID-19 vaccination, as well as strengthen broader routine immunisation services across the country.

- The support comes at a time when Sierra Leone and health partners are working to strengthen the health care delivery system and improve child health care services.

Freetown, 25 January 2023 – The COVID-19 Vaccine Delivery Partnership, (CoVDP), have today handed over vehicles including motorbikes and computers worth over US\$ 2.8 million to support Government of Sierra Leone's COVID-19 vaccine deployment. CoVDP is a joint venture of Gavi, the Vaccine Alliance, the United Nations Children's Fund (UNICEF) and the World Health Organization (WHO).

The items were officially handed over to Dr Austin Demby, Minister of Health and Sanitation in Freetown and they included two pick up vehicles, 250 motorbikes, six computers and accessories and 300 tablets with power banks. In addition, 15 Peripheral Health Units (PHUs), and four District Vaccine Stores, will be connected to solar powered systems.

These supplies are part of the technical and operational support which the country is receiving to help scale up COVID-19 vaccination and strengthen routine immunisation services across Sierra Leone...

[NIH launches intramural bioengineering center to foster technology collaboration across the agency](#)

January 25, 2023 — *NIH-wide resource will champion diversity, equity, inclusion and accessibility.*

The National Institute of Biomedical Imaging and Bioengineering (NIBIB) has established the Center for Biomedical Engineering Technology Acceleration (BETA Center), a new intramural research program to solve a range of medicine's most pressing problems. The BETA Center will serve the wider NIH intramural research program as a biotechnology resource and catalyst for NIH research discoveries.

The center will incorporate a focused engineering approach to accelerate the development, validation and dissemination of cutting-edge technologies. Areas of emphasis will include biomedical imaging, biosensing, engineered and synthetic biology, nanomaterials and biomaterials, artificial intelligence, modeling, computation and informatics. A unique feature of the center will be its ability to rapidly assemble expert teams for purpose-driven technology development to address urgent national and global health needs.

"The BETA Center will be a catalyst for innovation and collaboration," said NIBIB Director Bruce J. Tromberg, Ph.D. "Engineering and technology development are central to everything that NIH does. New tech drives new biomedical discoveries, and new discoveries are transformed into cutting-edge methods, devices and knowledge that can be widely disseminated."

A fundamental objective of the BETA Center is to expand diversity, equity, inclusion and accessibility (DEIA) at NIBIB, building on the inherent interdisciplinary nature of biomedical engineering...

Rates of Long COVID in the U.S. Have Declined Since June of 2022

January 26, 2023 News Release

The share of people who say they have had long COVID has declined since the summer, according to a new KFF analysis of self-reported data from the Centers for Disease Control and Prevention. Among people who have ever had COVID, the share who say they currently or have ever had...

As States Prepare to "Unwind" the Medicaid Continuous Enrollment Provision, Past Patterns Show That Most People Who Are Disenrolled from Medicaid Become Uninsured for All or Part of the Next 12 Months

January 25, 2023 News Release

Roughly two-thirds (65%) of people who were disenrolled from Medicaid or the Children's Health Insurance Program (CHIP) in a recent year became uninsured for all or part of the 12 months that followed, a new KFF analysis finds. The analysis of enrollment data from the 2016-2019 Medical Expenditure Panel Survey...

The Sentinel will track key peer-reviewed journals which address a broad range of interests in human rights, humanitarian response, health and development. It is not intended to be exhaustive. We will add to those monitored below as we encounter relevant content and upon recommendation from readers. We selectively provide full text of abstracts and other content but note that successful access to some of the articles and other content may require subscription or other access arrangement unique to the publisher. Please suggest additional journals you feel warrant coverage.

AMA Journal of Ethics

Volume 25, Number 1: E1-87

<https://journalofethics.ama-assn.org/issue/segregation-health-care>

Segregation in Health Care

Structural racism is deeply embedded in US health care. Legally sanctioned racial segregation in hospitals ended with the Civil Rights Act of 1964, with fiscally incentivized enforcement through

Medicare payment structures implemented in 1966. Yet, practices such as sorting patients by insurance status still perpetuate de facto racial and class segregation, especially in academic health centers. This theme issue investigates a clear health justice demand to definitively end continued normalization of structural racism everywhere we care for our ill and injured. This issue considers sources of ethical, clinical, public health, and educational responsibilities to remediate health injustice where students and trainees learn their professions and internalize professional norms.

Anti-Trafficking Review

No. 19 (2022)

<https://antitraffickingreview.org/index.php/atrjournal/issue/view/30>

Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.

Special Issue – Migration, Sexuality, and Gender Identity

Over the past decade, there has been growing recognition of LGBTI+ people's specific experiences with migration, asylum, informal labour, exploitation, and community-building away from home.

This Special Issue of *Anti-Trafficking Review* contributes to this literature with new conceptual and empirical research from countries across Asia, Europe, Africa, and the Americas. In highlighting the fluidity of sexuality and gender identity, the issue also expands our understanding of how survival is waged in the worlds of migration and informal labour.

Ethics & International Affairs

Summer 2022 (36.2) | July 29, 2022

<https://www.ethicsandinternationalaffairs.org/2022/summer-2022-36-2/>

ROUNDTABLE: VULNERABLE COMMUNITIES, FUTURE GENERATIONS, AND POLITICAL REPRESENTATION IN CLIMATE POLICY AND PRACTICE

... This roundtable collection is motivated by the following question: How can the voices of vulnerable communities and future generations be adequately and fairly represented within climate change policy and practice? The contributions address this question from several perspectives. Simon Caney focuses on global governance institutions to protect the interests of future generations, considering specific

proposals and asking what criteria should be used to evaluate them. Stephen Gardiner's essay builds on his previous work calling for a global constitutional convention, elaborating on the proposal and addressing objections to it. Colin Hickey argues that it is necessary to consider more informal modes of representing vulnerable communities and future generations, such as through grassroots organizations. In our contribution, we argue that the interests of future generations are best represented in deliberations around climate policy and practice by those already most vulnerable to the impacts of climate change. Marco Grix and Krushil Watene's essay argues that the representation of climate-vulnerable communities and future generations—in particular, Indigenous peoples—must ensure the protection of the complex network of social practices that guide how vulnerable communities respond to climate change...

Forced Migration Review (FMR)

FMR 70 September 2022

<https://www.fmreview.org/issue70>

Knowledge, voice and power

People with lived experience of displacement need to be heard. Their perspectives, strategies and solutions should be at the centre of discussions about policy and practice. The authors in this issue reflect on progress made but also on the road still to travel. They challenge attitudes, highlight injustices and make practical recommendations for change.

We are very grateful to the Local Engagement Refugee Research Network (LERRN) for their partnership on this issue and for the generous financial support of both the International Development Research Centre of the Government of Canada and LERRN (funded by the Social Sciences and Humanities Research Council (SSHRC)).

Forced Migration Review issue 70 includes a major feature on 'Knowledge, voice and power' exploring issues of representation, influence, privilege, access, discrimination and more.

The issue also includes a feature on 'Social cohesion in refugee-hosting contexts', exploring the role of social cohesion in contexts of protracted displacement, with a particular focus on Kenya and Lebanon. It has been produced with the financial support of the Arts and Humanities Research Council, the Foreign, Commonwealth and Development Office, and the Jesuit Refugee Service.

The art of medicine

Recruitmentology and the politics of consent in clinical research

Cameron Sabet, Simar S Bajaj, Fatima Cody Stanford

Bearing the weight of a traumatic history, medical research is often seen as invasive and harmful by subaltern communities. The term subaltern, originating from postcolonial theory, refers to socio-politically silenced groups that are excluded from inner circles of colonial power. Western academia, however, primarily operates on the pretence of colonialism as a historical phenomenon. This myopia allows academia to overlook its continuing contributions to the legacy of colonialism and avoid responsibility for decolonising efforts. One consequence is recruitmentology—the study of recruiting and retaining under-represented populations for research via sociocultural, economic, and psychological tactics.

[Tools such as ChatGPT threaten transparent science; here are our ground rules for their use](#)

As researchers dive into the brave new world of advanced AI chatbots, publishers need to acknowledge their legitimate uses and lay down clear guidelines to avoid abuse.

... But the release of the AI chatbot ChatGPT in November has brought the capabilities of such tools, known as large language models (LLMs), to a mass audience. Its developers, OpenAI in San Francisco, California, have made the chatbot free to use and easily accessible for people who don't have technical expertise. Millions are using it, and the result has been an explosion of fun and sometimes frightening writing experiments that have turbocharged the growing excitement and consternation about these tools....

That's why it is high time researchers and publishers laid down ground rules about using LLMs ethically. Nature, along with all Springer Nature journals, has formulated the following two principles, which have been added to our existing guide to authors (see go.nature.com/3j1jxsw). As Nature's news team has reported, other scientific publishers are likely to adopt a similar stance.

First, no LLM tool will be accepted as a credited author on a research paper. That is because any attribution of authorship carries with it accountability for the work, and AI tools cannot take such responsibility.

Second, researchers using LLM tools should document this use in the methods or acknowledgements sections. If a paper does not include these sections, the introduction or another appropriate section can be used to document the use of the LLM...

[Discriminatory attitudes against unvaccinated people during the pandemic](#)

Vaccinated people express discriminatory attitudes towards unvaccinated individuals across cultures.

Alexander Bor, Frederik Jørgensen, Michael Bang Petersen

Abstract

During the COVID-19 pandemic, sizeable groups of unvaccinated people persist even in countries with high vaccine access¹. As a consequence, vaccination became a controversial subject of debate and even protest². Here we assess whether people express discriminatory attitudes in the form of negative affectivity, stereotypes and exclusionary attitudes in family and political settings across groups defined by COVID-19 vaccination status. We quantify discriminatory attitudes between vaccinated and unvaccinated citizens in 21 countries, covering a diverse set of cultures across the world. Across three conjoined experimental studies (n = 15,233), we demonstrate that vaccinated people express discriminatory attitudes towards unvaccinated individuals at a level as high as discriminatory attitudes that are commonly aimed at immigrant and minority populations^{3,4,—5}. By contrast, there is an absence of evidence that unvaccinated individuals display discriminatory attitudes towards vaccinated people, except for the presence of negative affectivity in Germany and the USA. We find evidence in support of discriminatory attitudes against unvaccinated individuals in all countries except for Hungary and Romania, and find that discriminatory attitudes are more strongly expressed in cultures with stronger cooperative norms. Previous research on the psychology of cooperation has shown that individuals react negatively against perceived 'free-riders'^{6,7}, including in the domain of vaccinations^{8,9}. Consistent with this, we find that contributors to the public good of epidemic control (that is, vaccinated individuals) react with discriminatory attitudes towards perceived free-riders (that is, unvaccinated individuals). National leaders and vaccinated members of the public appealed to moral obligations to increase COVID-19 vaccine uptake^{10,11}, but our findings suggest that discriminatory attitudes—including support for the removal of fundamental rights—simultaneously emerged.

REVISED - A network of empirical ethics teams embedded in research programmes across multiple sites: opportunities and challenges in contributing to COVID-19 research and responses [version 2; peer review: 1 approved with reservations]

Nothando Ngwenya, et al.

Corresponding Authors: Nothando Ngwenya (nngwenya@ahri.org); Sassy Molyneux (SMolyneux@kemri-wellcome.org)

Abstract

Covid-19 continues to teach the global community important lessons about preparedness for research and effective action to respond to emerging health threats. We share the COVID-19 experiences of a pre-existing cross-site ethics network-the Global Health Bioethics Network-which brings together researchers and practitioners from Africa, Europe, and Southeast Asia. We describe the network and its members and activities, and the work-related opportunities and challenges we faced over a one-year period during the pandemic. We highlight the value of having strong and long-term empirical ethics networks embedded across diverse research institutions to be able to: 1) identify and share relevant ethics challenges and research questions and ways of 'doing research'; 2) work with key stakeholders to identify appropriate ways to contribute to the emerging health issue response – e.g., through ethics oversight, community engagement, and advisory roles at different levels; and 3) learn from each other and from diverse contexts to advocate for positive change at multiple levels. It is our view that being embedded and long term offers opportunities in terms of deep institutional and contextual knowledge, existing relationships and access to a wide range of stakeholders. Being networked offers opportunities to draw upon a wide range of expertise and perspectives, and to bring together internal and external insights (i.e. drawing on different positionalities). Long term funding means that the people and resources are in place and ready to respond in a timely way. However, many tensions and challenges remain, including difficulties in negotiating power and politics in the roles that researchers and research institutions can and should play in an emergency, and the position of empirical ethics within research programmes. We discuss some of these tensions and challenges and consider the implications for our own and similar networks in future.

REVISED - An overview of innovations in the external peer review of journal manuscripts.

[version 2; peer review: 2 approved with reservations, 1 not approved]

Helen Buckley Woods, et al.

Abstract

Background: There are currently numerous innovations in peer review and quality assurance in scholarly publishing. The Research on Research Institute conducted a programme of co-produced projects investigating these innovations. This literature review was part of one such project 'Experiments in peer review' which created an inventory and framework of peer review innovations. The aim of this literature review was to aid the development of the inventory by identifying innovations in the external peer review of journal manuscripts reported in the scholarly literature and by providing a summary of the different approaches. This did not include interventions in editorial processes. Methods: This review of reviews is based on data identified from Web of Science and Scopus limited from 2010 to 2021. A total of 291 records were screened, with six review articles chosen for the focus of the literature review. Items were selected that described approaches to innovating peer review or illustrated examples.

Results: The overview of innovations are drawn from six review articles. The innovations are divided into three high-level categories: approaches to peer review, reviewer focussed initiatives and technology to support peer review with sub-categories of results presented in tabular form and summarised. A summary of all innovations found is also presented.

Conclusions: From a simple synthesis of the review authors' conclusions, three key messages are presented: observations on current practice; authors' views on the implications of innovations in peer review; and calls for action in peer review research and practice.
