The Sentinel

***Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development***

Period ending 11 March 2023 :: Number 453

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted, and the elements of each edition are presented as a set of blog posts at <https://ge2p2-center.net/>. This blog allows full-text searching of over 6,000 entries.

Request email delivery of the pdf:

If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

The Sentinel is a service of the [GE2P2 Global Foundation](#), which is solely responsible for its content. Comments and suggestions should be directed to:

Week in Review

A highly selective capture of strategic developments, research, commentary, analysis and announcements spanning Human Rights Action, Humanitarian Response, Health, Education, Holistic Development, Heritage Stewardship, Sustainable Resilience. Achieving a balance across these broad themes is a challenge and we appreciate your observations and ideas in this regard. This is not intended to be a "news and events" digest.

Afghanistan – Human Rights “Erasure”

Afghanistan: UN experts say 20 years of progress for women and girls’ rights erased since Taliban takeover

GENEVA (8 March 2023) – UN experts today said the situation of women and girls’ rights in Afghanistan has reverted to that of the pre-2002 era when the Taliban last controlled the country, effectively erasing progress on women’s rights in the intervening 20 years. They issue the following statement:*

“In 2002, after years of being denied their rights under the previous Taliban regime, Afghan women celebrated International Women’s Day full of hope. The day was observed in Afghanistan and at UN Headquarters with the theme ‘Afghan women today: Realities and Opportunities’ and commitments were made to support our Afghan sisters rebuild their lives and be full partners in the post-conflict reconstruction of the country. On that day the international community said that the plight of Afghan women had been “an affront to all standards of dignity, equality and humanity.” It stressed that world support for reasserting their rights should go beyond expressions of solidarity.

Despite challenges, Afghan women and girls made steady advances towards fulfilling their human rights. However, the situation has significantly regressed to the pre-2002 period, and women are denied their fundamental rights and freedoms including the rights to education, to work, to the highest attainable standard of physical and mental health, freedom of movement and freedom from fear and want and from discrimination.

Now, over two decades later, girls in Afghanistan have been banned from secondary school and women from tertiary education. Women and girls have been banned from entering amusement parks, public baths, gyms and sports clubs for four months. Women have been banned from working in NGO offices. Since the takeover of Afghanistan by the Taliban in August 2021, women have been wholly excluded from public office and the judiciary. Today, Afghanistan’s women and girls are required to adhere to a strict dress code and are not permitted to travel more than 75 km without a mahram. They are compelled to stay at home.

All over the country, women report feeling invisible, isolated, suffocated, living in prison like conditions. Many are unable to have their basic needs met without access to employment or aid, including access to medical healthcare and psychological support in particular for victims of violence, including sexual violence. **It’s a sobering reminder of how swiftly and aggressively women’s and girls’ rights can be taken away.**

In two weeks, a new school year will start in Afghanistan. If the restrictions are indeed temporary, as the Taliban claim, they have an opportunity to prove it by lifting the ban on girls and women attending

secondary and tertiary education institutions and allowing them to resume their studies at the start of this school year.

We call on the de facto authorities to end the harmful annihilation of women rights and lift restrictions imposed on women, including on their working with NGOs.

We further call on the de facto authorities to fulfil their obligations under the international human rights treaties, including CEDAW, to which Afghanistan is a State party.

The international community must continue to provide robust support to Afghan women and;

1. Reaffirm their commitment by taking concrete actions to support and realise the rights of women and girls in Afghanistan, in particular their right to education and employment.
2. Prioritise women and girls rights in all their engagements with the de facto authorities and demand the immediate reversal of edicts and policies that assault women's and girls' rights.
3. Take proactive measures to support Afghan women to engage in decision making processes in Afghanistan and about Afghanistan.
4. Increase support to Afghan women so that they can resume employment, access aid and healthcare (including reproductive healthcare), and have an adequate standard of living."

ENDS

**The Experts:*

Richard Bennett, Special Rapporteur on the situation of human rights in Afghanistan;
Farida Shaheed, Special Rapporteur on the right to education,
Fionnuala Ní Aoláin, Special Rapporteur on the promotion and protection of human rights and fundamental freedoms while countering terrorism,
Dorothy Estrada Tanck (Chair), Ivana Radačić (Vice-Chair), Elizabeth Broderick, Meskerem Geset Techane and Melissa Upreti, Working Group on discrimination against women and girls;
Tlaleng Mofokeng, Special Rapporteur on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health.

"Global Freedom"

Freedom in the World 2023: Marking 50 Years in the Struggle for Democracy

Freedom House – *50th edition of annual global assessment of political rights and civil liberties*.

March 2023 :: 38 pages

PDF: https://freedomhouse.org/sites/default/files/2023-03/FIW_2023_50Years_DigitalPDF.pdf

Key Findings

Global freedom declined for the 17th consecutive year. Moscow's war of aggression led to devastating human rights atrocities in Ukraine. New coups and other attempts to undermine representative government destabilized Burkina Faso, Tunisia, Peru, and Brazil. Previous years' coups and ongoing repression continued to diminish basic liberties in Guinea and constrain those in Turkey, Myanmar, and Thailand, among others. Two countries suffered downgrades in their overall freedom status: Peru moved from Free to Partly Free, and Burkina Faso moved from Partly Free to Not Free.

The struggle for democracy may be approaching a turning point. The gap between the number of countries that registered overall improvements in political rights and civil liberties and those that registered overall declines for 2022 was the narrowest it has ever been through 17 years of global

deterioration. Thirty-four countries made improvements, and the tally of countries with declines, at 35, was the smallest recorded since the negative pattern began. The gains were driven by more competitive elections as well as a rollback of pandemic-related restrictions that had disproportionately affected freedom of assembly and freedom of movement. Two countries, Colombia and Lesotho, earned upgrades in their overall freedom status, moving from Partly Free to Free.

While authoritarians remain extremely dangerous, they are not unbeatable. The year's events showed that autocrats are far from infallible, and their errors provide openings for democratic forces. The effects of corruption and a focus on political control at the expense of competence exposed the limits of the authoritarian models offered by Beijing, Moscow, Caracas, or Tehran. Meanwhile, democratic alliances demonstrated solidarity and vigor.

Infringement on freedom of expression has long been a key driver of global democratic decline. Over the last 17 years, the number of countries and territories that receive a score of 0 out of 4 on the report's media freedom indicator has ballooned from 14 to 33, as journalists face persistent attacks from autocrats and their supporters while receiving inadequate protection from intimidation and violence even in some democracies. The past year brought more of the same, with media freedom coming under pressure in at least 157 countries and territories during 2022. Scores for a related indicator pertaining to freedom of personal expression have also declined over the years amid greater invasions of privacy, harassment and intimidation, and incentives to self-censor both online and offline.

The fight for freedom persists across decades. When Freedom House issued the first edition of its global survey in 1973, 44 of 148 countries were rated Free. Today, 84 of 195 countries are Free. Over the past 50 years, consolidated democracies have not only emerged from deeply repressive environments but also proven to be remarkably resilient in the face of new challenges. Although democratization has slowed and encountered setbacks, ordinary people around the world, including in Iran, China, and Cuba, continue to defend their rights against authoritarian encroachment.

.....

Press release

Global Freedom Declines for 17th Consecutive Year, but May Be Approaching a Turning Point – Freedom House

March 9, 2023

..."The struggle for freedom endures across generations," said Michael J. Abramowitz, president of Freedom House. "For 50 years, Freedom in the World has tracked the health of political rights and civil liberties around the globe. This latest edition documents a continuation of troubling trends, but it also gives some reason to hope that the freedom recession of the past 17 years may be turning a corner.

There is nothing inevitable about authoritarian expansion. While authoritarian regimes remain extremely dangerous, they are not unbeatable. The year's events showed that missteps by autocrats provide openings for democratic forces. And over the course of five decades, people from every region of the world have repeatedly challenged oppression and demanded freedom, even in the face of daunting odds and at great personal risk."

The report finds that one of the biggest drivers of democratic decline over the last 17 years has been a trend of attacks on freedom of expression..."**Freedom of expression is under attack around the globe," said Yana Gorokhovskaia, the report's coauthor** and Freedom House's research director for strategy and design. "Denying press freedom and the freedom of personal expression cuts citizens off from accurate information and from one another, strengthening authoritarian control.

Democracies must fiercely guard these rights at home and vigorously work to defend them abroad, in part by supporting public-interest media and journalists who have been forced into exile. They should also strictly regulate the use of surveillance tools and protect robust encryption technology, which is vital for the safety of activists, journalists, and ordinary users everywhere."

The report identifies a number of steps that democratic governments can take to protect and expand political rights and civil liberties. The recommendations include:

- **Help Ukraine win.** Democratic governments must maintain unwavering support for Ukraine and its people, whose cause is crucial to the future of freedom. This should include providing the weapons and technical and security assistance necessary to help ensure Ukrainian success on the battlefield.
- **Stop enabling authoritarians.** Democracies must address corruption and kleptocracy head on by closing the many financial loopholes that allow authoritarian rulers to hide or launder stolen assets in democratic settings.
- **Be clear and unapologetic about the virtues of democracy and tireless in efforts to uphold and defend it.** Democratic states should make the protection of freedom and democracy a fundamental component of all international policy efforts—including in foreign, security, and economic affairs—and every diplomatic engagement. Human rights concerns should be raised in meetings with foreign counterparts at all levels.
- **Dramatically ramp up support for human rights defenders and for countries and regions at critical junctures.** Democratic governments should help human rights defenders and civil society groups remain active in their home countries whenever possible, and provide technical assistance and training. When democracy advocates come under threat, their foreign partners should provide medical, legal, and psychosocial support as needed.

Human Genome Editing

Third International Summit on Human Genome Editing

The Third International Summit on Human Genome Editing took place on 6-8 March 2023 at the Francis Crick Institute, London UK.

Building on previous events held in Washington, DC ([2015](#)) and Hong Kong ([2018](#)), the London meeting continued the global dialogue on somatic and germline human genome editing. Major themes for discussion included developments in clinical trials and genome editing tools such as CRISPR/Cas9, as well as social, ethical and accessibility considerations these scientific developments entail.

The three-day Summit was organised by the Royal Society, the UK Academy of Medical Sciences, the US National Academies of Sciences and Medicine and The World Academy of Sciences. The [Summit's Organising Committee](#), chaired by Professor Robin Lovell-Badge FMedSci FRS, [released a statement](#) [full text below] based on the Summit discussions.

Watch the Third International Summit on Human Genome Editing [here](#)

.....

Statement from the Organising Committee of the Third International Summit on Human Genome Editing

Issued 08 March 2023

The Third International Summit on Human Genome Editing, convened by the UK Royal Society, UK Academy of Medical Sciences, US National Academies of Sciences and Medicine, and The World Academy of Sciences, was held to discuss progress, promise, and challenges in research, regulation, and equitable development of human genome editing technologies and therapies.

After listening to three days of thoughtful and inclusive discussion, **the members of the Organising Committee offer the following conclusions:**

:: Remarkable progress has been made in somatic human genome editing, demonstrating it can cure once incurable diseases. To realise its full therapeutic potential, research is needed to expand the range of diseases it can treat, and to better understand risks and unintended effects. The extremely high costs of current somatic gene therapies are unsustainable. **A global commitment to affordable, equitable access to these treatments is urgently needed.**

:: Heritable human genome editing remains unacceptable at this time. Public discussions and policy debates continue and are important for resolving whether this technology should be used. Governance frameworks and ethical principles for the responsible use of heritable human genome editing are not in place. Necessary safety and efficacy standards have not been met.

:: Governance mechanisms for human genome editing need to protect ongoing, legitimate research, while preventing clinics or individuals from offering unproven interventions in the guise of therapies or ways to avoid disease.

Somatic human genome editing¹

Numerous clinical trials using somatic human genome editing are in progress or soon to be initiated, with preliminary but encouraging results that point to future therapies. The dramatic improvement following CRISPR-based research interventions for sickle cell disease offers hope for patients. Many techniques, including base, prime, and epigenetic editing, may also prove to be useful interventions for a broad range of both genetic and acquired diseases and disorders. However, as with other gene therapies, extended long-term follow-up is essential to fully understand the consequences of an edit and to identify any unanticipated effects, should they occur.

Improved techniques have enhanced the efficiency, precision, and accuracy of the editing process, yet effective delivery and editing remains difficult for many tissues of the body. Further research to diversify and increase the efficiency, specificity, and safety of editing-delivery systems is essential for improving potential treatment options and promoting equitable access.

Equitable access for somatic human genome editing

As interventions based on somatic genome editing become more widespread, a commitment to equitable, financially sustainable, and accessible treatments becomes more urgent. In many cases, costs and infrastructure needs of current gene therapy treatments are not manageable for either patients or healthcare systems. Correcting this will require appropriate planning from the earliest stages of the research and development for each potential application. Ensuring research includes more genetically diverse populations and expanding the range of those who conceive and conduct the research, play a vital role in achieving equitable outcomes.

With sickle cell disease (as well as other genetic diseases), a large percentage of patients live in underserved countries and communities or in settings without adequate infrastructure. Moving from ex-vivo to “one and done” in-vivo somatic human genome editing can partially address this problem. But knowledge transfer between nations, improved clinics and research facilities, and strong oversight are also needed to establish sustainable access to safe interventions for research participants and patients.

Health care systems and the global health community should prepare to provide patients with cost-effective, affordable, proven therapies. Therapies based on somatic genome editing that could help meet these needs should be a priority for research investment.

Human germline genome editing for research (not for reproduction)²

Basic research using genome editing in human embryos has continued, with the aim of either understanding aspects of early human development or exploring how the methods might be used to correct gene variants leading to genetic disorders. There has also been significant progress in basic research on deriving functional gametes from stem cells. Basic research in this field should continue.

Heritable human genome editing

Preclinical evidence for the safety and efficacy of heritable human genome editing has not been established, nor has societal discussion and policy debate been concluded. (In some cases, preimplantation genetic testing is among the alternatives.) Heritable human genome editing should not be used unless, at a minimum, it meets reasonable standards for safety and efficacy, is legally sanctioned, and has been developed and tested under a system of rigorous oversight that is subject to responsible governance. At this time, these conditions have not been met.

Ongoing international collaboration and discussions

The Organising Committee calls for on-going dialogue and continued international collaboration on innovative approaches to governance and regulation of human genome editing technologies, the state of the science, and innovation in the treatment of genetic diseases.

- 1. Somatic human genome editing refers to the editing of somatic cells, which are non-reproductive cells, and changes made in these cells affect only the person who receives the genome editing.*
- 2. In this statement, germline human genome editing refers to the editing of human embryos or gametes in a research setting, with no plans for those embryos or gametes to be used for human reproduction. Heritable human genome editing refers to the editing of human embryos or gametes to be used for human reproduction.*

G-7 Science Academies Call for Actions to Improve Climate Change Decision-Making, Protect Ocean Biodiversity, and Support Well-Being of Older People

Statement | March 7, 2023

WASHINGTON — **Today the science academies of the G-7 countries issued three joint statements** to their respective governments to inform discussions during the G-7 summit to be held in Hiroshima, Japan, in May, as well as ongoing policymaking. The statements, which were drawn up by the academies under the aegis of the Science Council of Japan, call for strategies to address systemic risks and improve decision-making related to climate change; restore and recover ocean biodiversity; and deliver better health and well-being for aging populations.

Joint statements:

:: Addressing systemic risks in a changing climate: Science and technology in support of cross-sectoral decision-making [PDF]

The academies expressed grave concern about three global challenges: the increasing number of climate-related disasters; the COVID-19 pandemic and its global socioeconomic impacts; and the Russian invasion of Ukraine and its exacerbation of climate and health impacts. These three challenges highlight the need for action to reach climate targets, the statement says. It recommends multiple steps, such as increasing support for the improvement of models to project anthropogenic climate change's impact on economies; establishing cross-sectoral frameworks at the local, national, regional, and global levels to link cutting-edge science with on-site decision-making and action; and enhancing technical cooperation and financial support, especially for the most vulnerable countries with a large resource deficit, in order to pursue shared objectives and take concerted actions.

:: Restoration and recovery of the ocean and its biodiversity [PDF]

To restore and recover the ocean and its biodiversity, it is imperative that the G-7 governments take sustained, coordinated action, the statement says. For example, to shift towards sustainable fishing practices, governments should take measures to end illegal, unreported, and unregulated fishing; control large-scale commercial trawling and deep-sea trawling; and prevent overfishing. Governments should also adopt a comprehensive, ecosystem-based approach to the management of the coastal marine environment, including the effects of agricultural runoff and other land-based pollutants, and establish clear governance structures.

:: Delivering better health and well-being of older people through wisdom sharing and innovation [PDF]

The global population aged 65 and over is expected to increase from 10% currently to 16% by 2050, and the population aged over 80 is expected to triple in the next 30 years. The statement urges action to improve understanding of the complexity of aging biology and the diversity of aging trajectories in order to deliver sustainable solutions to the challenges of global population aging. It also urges the building of a new social support system that promotes successful lives and social participation by older people through a wide range of community-based programs and advanced technologies. Nations should also improve the socioeconomic status and well-being of formal and informal caregivers.

The U.S. National Academies of Sciences, Engineering, and Medicine are private, nonprofit institutions that provide independent, objective analysis and advice to the nation to solve complex problems and inform public policy decisions related to science, engineering, and medicine. They operate under an 1863 congressional charter to the National Academy of Sciences, signed by President Lincoln.

Polio

Polio this week as of 08 March 2023 - GPEI

Headlines

- **The Global Commission for Certification of Poliomyelitis Eradication (GCC) met 21-22 February** in Amman to review progress towards interrupting WPV1 transmission in endemic Pakistan and Afghanistan, implementation of the GPEI's Global Surveillance Action Plan, and to hear

from the six regional certification commissions on current priorities and issues. A report from the meeting including GCC recommendations will be posted on the GPEI website in the coming weeks. [Read more...](#)[see below]

- In the polio eradication programme, women are forces to be reckoned with. From the doorstep to the lab, they play important and integral roles at all levels of the polio programme. [To mark International Women's Day, we got the perspectives of four women](#) from the WHO Eastern Mediterranean Region who tap into digital innovations in WHO-supported laboratories to shape decision-making and spur swift action.
- **The GPEI has published two statements on polio transmission in Afghanistan and Pakistan, and Somalia and Yemen following the seventh meeting of the Regional Subcommittee on Polio Eradication and Outbreaks held on 28 February.** The statements are available [here](#) and [here](#).
- "The Government of Mozambique has shown strong leadership in the response to polio, ensuring that all eligible children are reached and protected with the vaccine through effective immunization campaigns," – Dr Matshidiso Moeti, WHO Regional Director for Africa, during a visit to Mozambique. [Read more...](#)

Summary of new polioviruses this week:

- Chad: one cVDPV2 case and one positive environmental sample
- DR Congo: 10 cVDPV1 cases and 17 cVDPV2 cases
- Israel: one cVDPV2 case
- Madagascar: five cVDPV1 cases
- Nigeria: one cVDPV2 case and six positive environmental samples

Türkiye/Syria Earthquakes

Today's top news

10 Mar 2023

...Syria

OCHA and its humanitarian partners continue the response to earthquake-affected areas across Syria, where at least 8.8 million people have been affected.

Since the beginning of the emergency response, humanitarian partners have reached more than 185,000 people across Syria with supplies. More than 280,000 people have received protection services, including awareness sessions on gender-based violence and child protection.

In north-west Syria, as of 10 March, 702 trucks loaded with aid provided by seven UN agencies have so far crossed from Türkiye since the earthquakes using the three available border crossings. A month after the quake, this represents double the number of trucks crossing per day compared to last year. In addition, as of 10 March, the UN has so far completed 24 cross-border missions to north-west Syria since the first interagency visit to Idleb on 14 February...

8 March 2023 *Statement*

WHO statement on the situation relating to the Regional Director of the Western Pacific

The World Health Organization (WHO) received allegations of misconduct against the Regional Director for the Western Pacific during the latter half of 2021 and in 2022.

In line with the Organization’s policy of zero tolerance for abusive conduct, the allegations were investigated and subsequently reviewed in accordance with the normal procedures applicable to all WHO staff members. This included the right of the Regional Director to receive all relevant evidence

and respond to the allegations in line with due process. These procedures resulted in findings of misconduct.

After careful consideration of the findings, and following consultation with the Regional Committee for the Western Pacific and the Executive Board, the Regional Director's appointment has been terminated.

The election cycle for the next Regional Director for the Western Pacific will begin in April 2023...

The Sustainable Development Goals Report 2022

7 July 2022 - The Sustainable Development Goals Report 2022 reviews progress of the 2030 Agenda for Sustainable Development, using the latest available data and estimates to track global progress of the 17 Goals with in-depth analysis of selected indicators for each Goal. The Report highlights the severity and magnitude of the challenges before us. The confluence of crises, dominated by COVID-19, climate change, and conflicts, are creating spin-off impacts on food and nutrition, health, education, the environment, and peace and security, and affecting all the SDGs.

PATH statement on gender equity in health

March 8, 2023 by PATH

At PATH, we believe that gender equity is essential for achieving optimal health outcomes for all individuals and communities. Gender equity means that everyone has the opportunity to achieve their full health potential, regardless of their sex, gender identity, or gender expression.

Unfortunately, gender inequities persist in many areas of health, from access to care to the development of new treatments and technologies...

Phased expansion of malaria vaccine use begins in more areas in Africa

March 7, 2023 by PATH

Kenya joins Ghana and Malawi in rolling out vaccine to more children at risk

Nairobi, Kenya—Expansion of malaria vaccination is underway in more areas in sub-Saharan Africa. Ghana, Kenya, and Malawi, which began piloting the RTS,S/AS01 malaria vaccine in selected areas in 2019, have begun phased expansion to additional children in the pilot areas. At the same time, other African countries are applying to Gavi, the Vaccine Alliance, for support as they consider malaria introduction in areas of greatest need.

On March 7, Kenya's Ministry of Health announced it was providing RTS,S in a total of 51 sub-counties, almost doubling the number of areas that have been receiving the vaccine in the malaria-endemic Lake Victoria region. Both Ghana and Malawi have also announced initial expansions in the use of RTS,S, the first vaccine recommended for use by the World Health Organization (WHO) to prevent malaria in children...

Spain to co-host 2023 Vaccine Alliance High-Level Summit on Immunisation

- The high-level summit, co-hosted by Gavi and Spain, will be an opportunity to look back on the immunisation strategy outlined by the Vaccine Alliance at 2020's Global Vaccine Summit in London
- Despite severe disruption caused by the pandemic, recent years have also highlighted the capacity for resilience in immunisation – with more vaccines administered by lower-income countries in 2021 than at any other time in history
- Professor José Manuel Barroso, Chair of the Board of Gavi, the Vaccine Alliance: "Leveraging our learnings from a historic global response, we are moving forward with a bold strategy to continue to grow routine immunisation, introduce new vaccines and reach more zero-dose children. I am delighted to be working with Spain to convene leaders from across global health as we reflect on this work and consider new ways to save lives through immunisation."

Geneva, 6 March, 2023 – Spain will join Gavi in co-hosting a high-level global summit bringing together global health stakeholders from multilateral organisations, governments, civil society, business and academia to take stock of the state of vaccination in Gavi-supported lower-income countries and look to the future.

This Summit will provide an opportunity to look at the impact achieved by the Vaccine Alliance during its current strategic period, which began in January 2021. Gavi and its partners faced the dual challenge of supporting routine immunisation while also responding to a once-in-a-century pandemic. Despite severe disruption, this period saw resilience, with more vaccines administered by lower-income countries in 2021 than at any other time in history and an increase in coverage for rotavirus vaccine, the second dose of measles-containing vaccine and pneumococcal conjugate vaccine...

Understanding the role of narratives in humanitarian policy change

06 March 2023

Key messages

- Narratives and frames have greater influence on policy change than facts and figures. They have a critical role to play in leveraging political will for transforming the humanitarian system.
- Humanitarian organisations have greater power to shape narratives than they are willing to admit.
- The constant need to raise funds has given rise to a master frame of exceptionalism. Dominant narratives represent crises as exceptional events that require humanitarian aid as a self-contained solution. The label 'humanitarian' is used both to forge a collective identity and to exclude other actors.
- This frame has Western roots and is increasingly contested by donors, affected governments, national and local aid groups, and international activists who are excluded from it. It helps fuel narratives used to delay transformations towards a more people-centred and locally led model, in particular assertions that the system needs money more than reform.
- New shared frames and narratives should underpin the relationship between donor governments and the public, aid agencies and aid recipients. They should focus on the independence and agency of affected countries and people, equity, partnership and progress.

Temperature-Stable TB Vaccine Safe, Prompts Immune Response in NIH-Supported Study

March 6, 2023 — Freeze-dried experimental TB vaccine tested in healthy adults.

What

A clinical trial testing a freeze-dried, temperature-stable experimental tuberculosis (TB) vaccine in healthy adults found that it was safe and stimulated both antibodies and responses from the cellular arm of the immune system. The Phase 1 trial was supported by the National Institute of Allergy and Infectious Diseases (NIAID), part of the National Institutes of Health. A non-temperature stable form of the candidate previously had been tested in several clinical trials. However, this was the first clinical trial of any subunit TB vaccine candidate in a temperature-stable (thermostable) form. Results are published in *Nature Communications*.

Protecting Bristol Bay: A victory 20 years in the making

March 10, 2023

On January 30, 2023, after a hard-won fight that stretched across nearly two decades, the Environmental Protection Agency (EPA) issued its 404(c) clean water act veto – effectively ending the threat of the potentially devastating effects of the Pebble Mine on Bristol Bay in southwest Alaska. The announcement follows a long, impassioned campaign led by Tribes in the region, and supported by Alaskans throughout the state.

The Moore Foundation has supported efforts to protect North Pacific wild salmon ecosystems, including Bristol Bay since 2001. This ruling helps to ensure the survival of this critical economic and environmental resource...

AMA Journal of Ethics

Volume 25, Number 3: E167-237 March 2023

<https://journalofethics.ama-assn.org/issue/clinicians-government>

Clinicians in Government

Clinicians serving in federal or state government in the United States are accountable to patients, the public, and their professions in ways that transcend clinicians' typical duties to individual patients and colleagues and even transcend their fiduciary duties to society. One reason for this is that, when clinicians draw upon their professional skill sets to help administer agencies, make laws, or enforce regulations, the social and cultural power they wield as professionals is reified with political power and authority of the state. Clinician governors' legal and ethical responsibilities extend to preparing, building, and maintaining health sector capacity to deliver quality services equitably in the best of times and during crises. Our lives often depend on how fully clinician governors' offices are respected and how competently and efficiently their roles are executed.

Anti-Trafficking Review

No. 19 (2022)

<https://antitraffickingreview.org/index.php/atrjournal/issue/view/30>

Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.

Special Issue – Migration, Sexuality, and Gender Identity

Over the past decade, there has been growing recognition of LGBTI+ people's specific experiences with migration, asylum, informal labour, exploitation, and community-building away from home.

This Special Issue of *Anti-Trafficking Review* contributes to this literature with new conceptual and empirical research from countries across Asia, Europe, Africa, and the Americas. In highlighting the fluidity of sexuality and gender identity, the issue also expands our understanding of how survival is waged in the worlds of migration and informal labour.

Forced Migration Review (FMR)

FMR 71 January 2023

<https://www.fmreview.org/issue71>

Socio-economic integration

Forced Migration Review issue 71 focuses on 'Socio-economic integration: towards solutions for displaced people'.

The quest for socio-economic integration, for both forcibly displaced people and host communities, raises fundamental questions for all those involved in forced migration policy, practice and research about how displaced people can live with autonomy and dignity.

The authors in FMR 71 share new perspectives on socio-economic integration that we hope can lead to a concrete and transformative shift in approaches. They reimagine the role of integration in responses to displacement, at a significant time of global change marked by the COVID-19 pandemic, urgent climate-related pressures and ongoing digital transformation. Most importantly, this issue includes displaced people's voices and strategies in working towards solutions.

We will be holding a 90-minute online launch event on 22nd February at 2pm Oxford time/9am in New York/4pm in Beirut. Please do join us by [registering here](#). We will provide Spanish, French and Arabic interpretation upon request. Please follow the link for more details.

ACMG Statement

The designated record set for clinical genetic and genomic testing: A points to consider statement of the American College of Medical Genetics and Genomics (ACMG)

Section snippets

Background

Individuals have a right to access certain information in their medical records as established under the Health Insurance Portability and Accountability Act of 1996 (HIPAA).¹ The specific information to which individuals have access is called a designated record set (DRS), a legal term of art defined in the HIPAA Standards for Privacy of Individually Identifiable Health Information (Privacy Rule).² The Privacy Rule is a federal medical privacy law that applies to most clinical laboratories

HIPAA's right of access to genetic and genomic information

The HIPAA¹ Privacy Rule² establishes a set of national standards for the protection of certain health information.⁴ HHS finalized the Privacy Rule,⁵ which became effective on a phased schedule in 2003-2004. The Privacy Rule addresses the use and disclosure of individuals' protected health information (PHI), the term for identifiable health information that HIPAA protects.⁶ The Privacy Rule also creates federally protected civil rights for individuals to understand and control how their health

Summary

The right to access one's genetic and genomic data generated by HIPAA-covered laboratories is a civil right safeguarded by federal privacy law, but it exists in tension with concerns about possible harms from misunderstanding or misuse of data. Further research is needed to determine best practices for presenting data in response to patients' HIPAA access requests. Owing to the complex nature of genetic and genomic data, great care is needed to limit the potential for misunderstanding or misuse

[Saving children's lives through interventions: a quasi-experimental analysis of GAVI](#)

Admasu Asfaw Maruta, Clifford Afoakwah

Published online by Cambridge University Press: 03 October 2022, pp. 121-138

This study evaluates the impact of the Global Alliance for Vaccines and Immunization (GAVI) on children's health outcomes in developing countries. Using a difference-in-differences identification strategy, we find that GAVI has reduced neonatal, infant and under-five mortality rates. The impact of GAVI on children's health outcomes is larger in countries with lower per capita income. Our findings underscore the relevance of health interventions in improving children's health outcomes in developing economies.

Health misinformation and freedom of expression: considerations for policymakers

João Marecos, Ethan Shattock, Oliver Bartlett, Francisco Goiana-da-Silva, Hendramoorthy Maheswaran, Hutan Ashrafian, Ara Darzi

Published online by Cambridge University Press: 31 January 2023, pp. 204-217

Health misinformation, most visibly following the COVID-19 infodemic, is an urgent threat that hinders the success of public health policies. It likely contributed, and will continue to contribute, to avoidable deaths. Policymakers around the world are being pushed to tackle this problem. Legislative acts have been rolled out or announced in many countries and at the European Union level. The goal of this paper is not to review particular legislative initiatives, or to assess the impact and efficacy of measures implemented by digital intermediaries, but to reflect on the high constitutional and ethical stakes involved in tackling health misinformation through speech regulation. Our findings suggest that solutions focused on regulating speech are likely to encounter significant constraints, as policymakers grasp with the limitations imposed by freedom of expression and ethical considerations. Solutions focused on empowering individuals – such as media literacy initiatives, fact-checking or credibility labels – are one way to avoid such hurdles.

[**Impact of restricting access to health care services on Syrian refugees in Jordan: evidence from cross-sectional surveys**](#)

[Ibraheem Khaled Abu Siam, María Rubio Gómez](#)

Purpose

Access to health-care services for refugees are always impacted by many factors and strongly associated with population profile, nature of crisis and capacities of hosting countries. Throughout refugee's crisis, the Jordanian Government has adopted several healthcare access policies to meet the health needs of Syrian refugees while maintaining the stability of the health-care system. The adopted health-care provision policies ranged from enabling to restricting and from affordable to unaffordable. The purpose of this paper is to identify the influence of restricted level of access to essential health services among Syrian refugees in Jordan.

Perspective

Worldwide poliomyelitis outbreaks: should mass gathering organizers be concerned?

Jaffar A Al-Tawfiq, MD, FACP, FRCP (London), Rana F Kattan, MD, MME, Saleh Abdullah S Almoallem, MD, Kauthar J Altawfiq, MBBS, Ezzeddine Mohsni, MD ...

Journal of Travel Medicine, Volume 30, Issue 1, January 2023, taac128,
<https://doi.org/10.1093/jtm/taac128>

The polio is the longest PHEIC and the continued occurrence of outbreaks of cVDPV would put further risks globally. The binary nature of PHEIC declarations would not support the continued polio PHEIC due to the requirement of tiered or graded strategies to combat such diseases.

Cholera vaccine and mass gatherings: protecting the crowds

Ramadan A Farahat, MBCh, Sheharyar H Khan, MBBS, Frew Benson, MBCh (US), DTM&H (Wits), DHSM (UCT), MSc(Med) Wits, PhD (Wits), David L Heymann, BA MD DTM&H, Ziad A Memish, MD, FRCPC, FACP, FIDSA, FFPH

Journal of Travel Medicine, Volume 30, Issue 1, January 2023, taad010,
<https://doi.org/10.1093/jtm/taad010>

With the ongoing outbreaks of cholera in many countries globally, the risk to MG events cannot be overlooked. Cholera vaccine should be a tool used to vaccinate high-risk populations in countries where cholera epidemics continue, but the shortage of vaccines precludes its use emphasizing the need for increasing vaccine supplies.

Editor's Choice

National policies for delivering tuberculosis, HIV and hepatitis B and C virus infection services for refugees and migrants among Member States of the WHO European Region

Rebecca F Baggaley, PhD, Joshua Nazareth, MRCP, Pip Divall, MSc, Daniel Pan, MRCP, Christopher A Martin, MRCP ...

Journal of Travel Medicine, Volume 30, Issue 1, January 2023, taac136,

<https://doi.org/10.1093/jtm/taac136>

Background/objective

Refugees and migrants to the World Health Organization (WHO) European Region are disproportionately affected by infections, including tuberculosis (TB), human immunodeficiency virus (HIV) and hepatitis B and C (HBV/HCV) compared with the host population. There are inequities in the accessibility and quality of health services available to refugees and migrants in the Region. This has consequences for health outcomes and will ultimately impact the ability to meet Regional infection elimination targets.

Editorial

Pragmatic global health

The Lancet Global Health

Global health as a knowledge system remains marred by (neo)colonialism, which instils and maintains worrisome asymmetries of power. Moreover, global health solutions all too often fall foul of overmedicalisation: the tendency to focus exclusively on biomedical solutions to control individual risk factors without tackling deep-rooted social determinants of health through political and social actions. The co-existence of colonialism and overmedicalisation has enabled parachute (or helicopter) research and a persistent gap between knowledge and practice, as the real-world usability of the evidence produced is seldom the primary focus in this research paradigm.

There is no simple, immediate solution for these threats to global health, but taking a more pragmatic approach seems a good place to start. A pragmatic approach could contribute to shrinking the knowledge–practice gap and maximising real-world implications through a multidimensional effort that centres on local needs and participation.

Being pragmatic in global health primarily means adopting a consequentialist perspective—ie, oriented by the practical consequences of interventions...

Editorial

Supporting healthcare access for refugees and migrants

The Lancet Infectious Diseases

... For a host country, managing a large influx of refugees and migrants is a complex task that requires strong political commitment, well-established policies, and structures in place. If giving incoming populations a home, protection, and opportunities for an income is essential, access to healthcare for displaced populations is equally a key human right. The release on Jan 25, 2023, of the WHO Refugee and Migrant Health Toolkit was aimed at helping individual countries to access all available guidelines and tools to develop policies to integrate migrants and refugees in their health system. Such integration is essential for the achievement of the goals of the Global action plan on promoting the health of refugees and migrants, 2019–2023, that mandates provision of healthcare to anyone independently from nationality...

The reality remains that countries denying universal healthcare to their own citizens are unlikely to be open to implementing access to care for refugees and migrants. Without a strong political will and commitment, any guideline or tool to develop, promote, and support access to healthcare for migrants and refugees will be useless. But without equity in health access, we will never have resilient health systems and healthy populations.

[Strategies for HIV-1 vaccines that induce broadly neutralizing antibodies](#)

There are many reasons why the development of a potent and durable vaccine to HIV-1 is exceptionally challenging, including the large genetic diversity of the virus and its complex mechanisms of immune evasion. In this Review, Haynes et al. discuss strategies for the induction of potent broadly neutralizing antibodies for HIV-1 and the steps that may be necessary for ultimate success.

Revised - [Drug and Therapeutics Committee \(DTC\) evolution and expanded scope in Ethiopia](#) [version 2; peer review: 1 approved with reservations, 1 not approved]

Habtamu Seyoum, et al.

Abstract

As a key partner of Ministry of Health (MOH) Ethiopia, The Clinton Health Access Initiative (CHAI) had been implementing the Child Survival Project (CSP) since October 2015. Strengthening DTC was one of its focuses to improve overall supply chain management (SCM). The objective of this study are to review the evolution of DTCs in Ethiopia from their early years to current practice and identify the major driving and hindering factors for their functionality.

A descriptive mixed study design was employed. The study made use of qualitative data supplemented with quantitative data, generated from both primary and secondary sources through key informant interviews and desk review methods.

DTCs were introduced in Ethiopia in the early 1980s. The mandate of DTCs has been given to four different government organizations during that time. As a result, due to a lack of coordination among these organizations, its implementation was lagging. Recently, the government and its partners have

given attention to DTCs. More than 5847 professionals underwent DTC training from 2016 onwards. DTC establishment in health facilities improved from 85% to 98% between 2015 and 2019 during baseline and end-line assessments carried out by CHAI/CSP. Similarly, DTC functionality in HFs improved from 20% to 63%. The CHAI/CSP regular supervision data analysis revealed that DTC establishment improved from 83% to 100% of HFs, while its functionality improved from 5% to 72% between 2016 and 2019, respectively. A chi-square test of independence examining the relationship between facility and pharmacy head training on DTCs and functionality of DTC in the same facility revealed a significant association between the two variables at $p < 0.0001$.

Conclusions: Providing consistent capacity building and availing strong monitoring and evaluation system improves functionality of DTCs. Moreover, national coordinating bodies for DTCs and similar structures at Regional Health Bureaus and woreda health offices should be established.

Introducing a Framework for Open and Reproducible Research Training (FORRT)

Flavio Azevedo, et al.

Last edited: Mar 8, 2023 UTC

Social and Behavioral Sciences Education Curriculum and Instruction Life Sciences Medicine and Health Sciences Higher Education

Abstract

Dramatic changes to the transparency, rigor, reproducibility and replicability of research practices have occurred in the last decade. Despite considerable progress towards the adoption of open science practices by researchers in many disciplines, developing pedagogy to train students in open and reproducible scholarship has received much less attention. Engaging students with the multiple dimensions of open scholarship is crucial to embedding sustainable change: it enables the future generation of researchers to practice open scholarship themselves, fosters lasting engagement with research, and allows them to better understand findings in light of epistemic uncertainty. Teaching students about open scholarship also helps it become a public good, thereby reducing knowledge inequities in academia and beyond. We address the lack of an infrastructure for open scholarship education by introducing the Framework for Open and Reproducible Research Training (FORRT). FORRT is a community-driven infrastructure for educators that advances research transparency, reproducibility, rigor, and ethics through pedagogical reform. FORRT encompasses multiple initiatives and tools to provide educators with guidance and resources to easily embed open and reproducible practices into research training. In addition to fostering a wider ecosystem for resource-sharing and discussion, FORRT has developed a wide range of initiatives, including a seven-part roadmap to the open scholarship literature, a curated database of open scholarship materials and pedagogies for customizable adoption by teachers, and a self-assessment tool to help educators evaluate the integration of open scholarship tenets in their own teaching and mentoring. FORRT actively works towards principled teaching and mentoring, an underappreciated dimension of the scientific endeavour.

REVISED - Respecting values and perspectives in biobanking and genetic research governance: Outcomes of a qualitative study in Bengaluru, India [version 2; peer review: 1 approved, 1 approved with reservations]

Manjulika Vaz, Prasanna Warriar, Calvin Wai-Loon Ho, Susan Bull

Abstract

Background: The promise of biobanking and genetic research (BGR) in the context of translational research towards improving public health and personalised medicine has been recognised in India. Worldwide experience has shown that incorporating stakeholders' expectations and values into the governance of BGR is essential to address ethical aspects of BGR. This paper draws on engagement with various stakeholders in the South Indian city of Bengaluru to understand how incorporating people's values and beliefs can inform policy making decisions and strengthen BGR governance within India.

Methods: We adopted a qualitative research approach and conducted six focus group discussions with civil society members and seven in-depth interviews with key informants in BGR, identified through a targeted web search and snowballing methods, until data saturation was reached. Data were thematically analysed to identify emergent patterns.

Results: Specific themes relating to the ethics and governance of BGR emerged. Fears and uncertainty about future sample and data use, possibilities of discrimination and exploitation in the use of findings and the lack of comprehensive data protection policies in India along with expectations of enhanced contributor agency, control in future use of samples and data, benefit sharing, enhanced utility of samples, sustained BGR and public good, reflected tensions between different stakeholders' values and beliefs. Fair governance processes through an independent governance committee for biobanks and a system of ongoing engagement with stakeholders emerged as best practice towards building trust and respecting diversity of views and values.

Conclusions: Ensuring public trust in BGR requires listening to stakeholders' voices, being open to counter narratives, and a commitment to long term engagement embedded in principles of participatory democracy. This is central to a 'people-centred governance framework' involving a negotiated middle ground and an equilibrium of governance which promotes social justice by being inclusive, transparent, equitable, and trustworthy.
