The Sentinel

***Human Rights Action :: Humanitarian Response :: Health :: Education ::
Heritage Stewardship :: Sustainable Development***

Period ending 16 September 2023 :: Number 477

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including key agencies/IGOs, NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer-reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted, and the elements of each edition are presented as a set of blog posts at <https://ge2p2-center.net/>. This blog allows full-text searching of over 6,000 entries.

Request email delivery of the pdf:

If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

The Sentinel is a service of the [GE2P2 Global Foundation](#), which is solely responsible for its content. Comments and suggestions should be directed to:

Week in Review

A highly selective capture of strategic developments, research, commentary, analysis and announcements spanning Human Rights Action, Humanitarian Response, Health, Education, Holistic Development, Heritage Stewardship, Sustainable Resilience. Achieving a balance across these broad themes is a challenge and we appreciate your observations and ideas in this regard. This is not intended to be a "news and events" digest.

Democracy

Generational Shift: New Global Poll Reveals Large Minorities of Young People Lack Faith in Democracy to Deliver on Their Priorities

The 2023 Open Society Barometer reveals a generational shift as young people question democracy's ability to deliver on priorities.

September 11, 2023

NEW YORK—The Open Society Barometer, an annual global survey from the Open Society Foundations that launched today, finds that young people around the world (Generation Z and millennials) hold the least faith in democracy of any age group, presenting a grave threat to its future. Over a third (35 percent) of respondents in the 18–35 age group were supportive of a strong leader who does away with legislatures and elections.

The report, Open Society Barometer: Can Democracy Deliver?, finds that the concept of democracy remains widely popular across every region of the globe, with 86 percent saying that they would prefer to live in a democratic state. There is also widespread disbelief that authoritarian states can deliver more effectively than democracies on priorities both nationally and in global forums.

Topping the list of such priorities, people worry most about poverty and inequality (20 percent), climate change (20 percent), and corruption (18 percent). Potentially indicating a lack of faith that governments are addressing such needs, around a third of respondents on average distrust politicians to work in their best interests.

The poll was carried out between May and July of 2023 by the pollster Savanta, as well as Gradus Research in Ukraine, using a mix of online panels and local vendors in 30 countries from every region and with a variety of political systems. The results paint a picture of the attitudes, concerns, and hopes of people in states with a collective population of over 5.5 billion—making it one of the largest studies of global public opinion on human rights and democracy ever conducted...

The findings include:

- **People support democracy. Only 20 percent consider authoritarian countries more capable than democracies of delivering “what citizens want.”** At the international level, two-thirds (66 percent) of respondents feel that democracies contribute more to global cooperation. Respondents also believe firmly in human rights, with an overwhelming 95 percent rejecting the idea that it's OK for governments to violate the rights of those who look different from themselves. Countries across every region, income level, and current type of governance maintained strong levels of support.
- **A large minority of young people surveyed (42 percent) feel that military rule is a good way of running a country.** A similar number (35 percent) feel that having a strong leader who does not bother with elections or consulting legislatures is a good way of running a country. This compares to 20 percent that support military rule and 26 percent that are in favor of a strong leader in the 56 and above age bracket.

- **Majorities in 21 of the countries polled fear that political unrest could lead to violence in the next year.** Large majorities in some high-income countries also share this worry, including two-thirds of respondents in the United States and France. Forty-two percent of respondents believe the laws of their country do not keep people like them safe.
- **Half of respondents (49 percent) say they have struggled to feed themselves at least once in the last year**—a number that holds in states as dissimilar as Bangladesh and the United States.
- **The climate crisis is a high priority for citizens across low-, middle-, and high-income countries.** Seventy percent of those surveyed expressed anxiety that climate change will personally affect respondents and their livelihoods in the next year.
- **Across the globe, corruption is considered the chief concern for people at a national level**—with an average of 23 percent saying it is the most important issue facing their country. Countries in Africa and Latin America expressed far greater concern, in stark contrast with Western Europe.
- **Poverty and inequality rank the highest (21 percent) among the issues that most directly impact people personally.** This holds true in Senegal (the smallest economy surveyed) as well as the United States (the largest). Moreover, a majority (69 percent) believe that economic inequality between countries is a bigger challenge this year than last. This is most keenly felt in Africa, Latin America, and the Middle East.
- **A plurality of respondents believe China's growing influence will be a force for good**—nearly twice as many respondents believe this will have a positive impact (45 percent) on their country as a negative one (25 percent). However, there is a sharp contrast between the enthusiasm of lower-income countries and the overwhelming negativity of high-income democracies, where only small minorities register positivity about the rise of China
- **People believe that a fairer international system would be more effective.** Sixty-one percent of those surveyed believe low-income countries should have a greater say in global decision-making—though, predictably, lower-income regions were more enthusiastic than Europe and the United States on this front.

.....

Human Rights

Renewing human rights

Placing the global challenges of inequality, climate change and technology at the heart of the human rights agenda does not mean turning away from other human rights priorities.

Chatham House briefing 14 September 2023

PDF: <https://www.chathamhouse.org/sites/default/files/2023-09/2023-09-14-renewing-human-rights-griffiths.pdf>

In an era of compounding challenges that pose significant risks to societies worldwide – particularly rising economic inequality, climate change and biodiversity loss, and rapid technological advancement – **there is a crucial role for the human rights system to contribute to bold and creative global responses.**

The 75th anniversary of the Universal Declaration of Human Rights, in December 2023, is a time to reflect on how the human rights system as it has evolved since 1948 can remain relevant to a world that is very different to the one in which the declaration came into being.

This briefing paper argues that there is true opportunity for renewal. It examines how the human rights system should seek to achieve positive change; and proposes an agenda for how human rights can be applied to some of the greatest challenges now facing our world...

Summary

- **Both as a system of law and as a moral discourse, human rights have much to offer in tackling the compounding global challenges of our time – particularly economic inequality, the climate and biodiversity crises, and technological change.**
- These challenges demand bold and creative interdisciplinary responses. Drawing on the unique strengths of the human rights system to complement other multilateral frameworks, including those that rely on voluntary action by states, will be critical to ensuring citizens can hold governments and corporations to account.
- **Addressing economic inequality should be a global human rights priority.**
This is a complex and multifaceted challenge. The contribution of human rights should include emphasizing human outcomes of economic policy as well as strengthening regulation.
- **Climate change is arguably the most consequential human rights crisis of all time.** While human rights are already a useful basis for climate litigation, climate change and biodiversity loss are likely to shift the entire human rights agenda of the future.
- Human rights also provide **a framework to navigate the complex opportunities and threats created by emerging technologies, helping governments and societies to focus on protecting human dignity and autonomy.**
- Civil and political rights are under serious threat from **rising authoritarianism.** They are also fundamental to achieving progress in addressing the deep challenges discussed in this briefing paper. Holding open the space for meaningful civic participation underpins everything else, and must remain a human rights priority.

Development

Commitment to Development Index 2023

Ian Mitchell et al.

Center for Global Development September 13, 2023

PDF: <https://www.cgdev.org/sites/default/files/cdi-2023-brief-ENG.pdf>

The Commitment to Development Index (CDI) ranks 40 of the world's most powerful countries on policies that affect global development. In an increasingly interconnected world, decisions made by the richest countries have impacts far beyond their borders, and often disproportionately affect the world's poorest and most vulnerable. Yet greater global prosperity is in the common interest of all, creating new economic and trade opportunities, increasing innovation, and reducing risks posed by global health, security, and climate crises.

Because development depends on much more than just how foreign aid budgets are spent, the CDI covers **eight distinct policy areas:**

- Development finance
- Investment
- Migration
- Trade
- Environment
- Health

- Security
- Technology
-

What does the CDI measure?

We assess countries across more than 40 indicators to come up with rankings for each of the eight policy components, as well as each **country's overall commitment to development**. Countries score well for things like generous and high-quality finance for development, transparent investment, low barriers to trade for developing countries, and migration policies which are open and promote integration. Policies that enhance global public goods—such as fostering global health through disease prevention, supporting technological research, protecting biodiversity and the climate, and contributing to global security—also contribute to high scores.

How are countries doing?

Sweden tops this year's CDI, followed by Germany coming in second and Norway in third place. Sweden ranks first in development finance, migration, and environment, and second in health. Its performance in technology, however, remains relatively weak with low levels of research collaboration. Though Sweden also finished top in the previous CDI, its lead over the next-best-performing countries has shortened.

Germany comes second overall, improving five places since the previous CDI. This is thanks in part to a substantial increase in its Finance for International Development, which rose from 0.46 percent to 0.61 percent of its Gross National Income (GNI). Norway ranks third, performing well in development finance and technology—and ranking first for investment—but underperforming on trade and environment due to high agricultural subsidies and fossil fuel production.

Finland and France complete the top five; the former also comes first on health, while the latter scores strongly on its policies supporting investment in developing countries.

The United Kingdom has dropped two places overall, in part due to a series of cuts to its aid budget—with Finance for International Development falling from 0.63 percent to 0.41 percent of GNI—but also because that aid is now less focused on poorer recipients.

Given the economic importance of countries in the G20, we include nine middle-income countries in the ranking. Among this group, South Africa ranks highest, in 25th place, with above average contributions in technology, security, and migration. Brazil and Türkiye were next highest with relative strengths on investment and migration respectively.

Changes in rank can reflect policy changes or improvements in data. The United Arab Emirates has risen seven ranks to 32nd overall but comes top on technology. With the publication of new data, we see that it hosts the highest number of foreign tertiary students relative to its domestic student population, while average incomes of the countries of origin of these students is the sixth lowest among CDI countries. Greece and Switzerland also rose by five or more places...

.....

SDGs – Science

[Science-driven transformation pivotal to SDGs acceleration, say scientists in new UN report](#)

12 September 2023 — Ahead of the SDG Summit, a new UN report by **an independent group of scientists launched today calls for transformational shifts rooted in science that would urgently reverse course and turbocharge the Sustainable Development Goals (SDGs).**

With the world off track to achieving the SDGs, action is needed. Drawing on the latest data and scientific insights, the Global Sustainable Development Report 2023, entitled “Times of crisis, times of change: Science for accelerating transformations to sustainable development,” offers practical solutions to accelerate SDG implementation.

“The 2023 Global Sustainable Development Report helps to shine new light on transformative processes and practices that can help move the world from commitment to action, and from declaration to delivery,” said UN Secretary-General António Guterres.

At this critical juncture, midway to 2030, the evidence makes clear that incremental and fragmented change is insufficient to achieve all 17 SDGs in the remaining seven years, or even by 2050. Instead, strategic, whole-of-society transformations are needed. And this must be achieved globally – leaving no country, society or person behind.

Science must play major role in advancing sustainable development

Science must play a major role in advancing sustainable development providing evidence to support the emergence of innovations and dismantle negative pathways or paradigms. The report calls on universities, policymakers and research funders to increase support to research guided by the 2030 Agenda, especially in the Global South. To be meaningful, science needs to be transparent, inclusive, and transdisciplinary – produced in diverse contexts by heterogeneous and multidisciplinary groups engaging all possible actors, including youth.

GSDR Co-chair Imme Scholz, Co-president of the Heinrich Böll Foundation, says: **“Science is essential, but not sufficient in itself. Good policymaking combines scientific insight with social norms and with what people need, want, and are prepared to give. This includes spelling out the costs and benefits of transformation and defining a just transition.”...**

About the Global Sustainable Development Report

The quadrennial Global Sustainable Development Report was mandated by the United Nations General Assembly, to inform the SDG Summit. It has been drafted by an independent group of 15 scientists appointed by the United Nations Secretary-General. The scientists represent diverse disciplines in the natural and social sciences and hail from both developed and developing countries.

IP – Intellectual Property

New WIPO Survey Reveals Global Perceptions and Awareness of IP

World Intellectual Property Organization – WIPO Sep 13, 2023 PR/2023/906

PDF: <https://www.wipo.int/publications/en/details.jsp?id=4681>

Two thirds of people questioned in a new global survey have a positive perception of the role that intellectual property (IP) plays in their economies, but younger people still lag in understanding IP, according to WIPO Pulse, a groundbreaking new survey into people's attitudes toward IP.

WIPO Pulse is the world's first survey of global IP awareness and perception at such an international scale. The results offer a range of unique insights based on responses from 25,000 people in 50 countries and is designed to complement WIPO's research on innovation, branding, the creative sector and IP statistics, among others.

"For decades, WIPO has been a trusted source of information and insights on the technical aspects of IP but we've been lacking the 'people' dimension of our data, which has become more important as we bring IP to the grassroots and connect with those innovating and creating on the ground," said WIPO Director General Daren Tang in launching the report.

Among its findings, the survey shows that 66.4% of respondents across all regions recognize the positive impact of IP on the economy, with this being felt strongest in Asia-Pacific (76%), Africa (70%) and Latin America and the Caribbean (67%)...

Figure 1. Awareness index

Awareness index – a share of respondents (%) considered knowledgeable about patents. Condition: personal understanding evaluated as “know very little, fairly well or very well” (subjective awareness), combined with correctly answered control question (objective awareness).

SDG Digital connects tech with urgent efforts to accelerate progress on the Sustainable Development Goals

September 17, 2023

New York - More than two-thirds of the UN's targets for sustainable development can benefit directly from digital technologies, according to the International Telecommunication Union (ITU) and the United Nations Development Programme (UNDP), organizers of SDG Digital which opened today at United Nations Headquarters in New York.

With digital technologies so closely linked to the Sustainable Development Goals (SDGs), the SDG Digital event highlights how safe, inclusive and scalable digital solutions can put the 2030 Agenda for Sustainable Development back on track amid concerns that the world may miss the vision for people, planet and prosperity that was set in 2015.

The SDG Digital Acceleration Agenda, a global analysis of the connections between digital technologies and sustainable development, was released as part of SDG Digital to provide a roadmap to governments on their digital transformation journey and to promote action and financing...

Launch of The Sustainable Development Goals Report 2023: Special Edition

The Sustainable Development Goals Report 2023: Special Edition provides a powerful call to action, presenting a candid assessment of the SDGs based on the latest data and estimates. While highlighting the existing gaps and urging the world to redouble its efforts, the report also emphasizes the immense potential for success through strong political will and the utilization of available technologies, resources, and knowledge. Together, the global community can reignite progress towards achieving the SDGs and create a brighter future for all.

According to the report, the impacts of the climate crisis, the war in Ukraine, a weak global economy, and the lingering effects of the COVID-19 pandemic have revealed weaknesses and hindered progress towards the Goals. The report further warns that while lack of progress is universal, it is the world's poorest and most vulnerable who are experiencing the worst effects of these unprecedented global challenges. It also points out areas that need urgent action to rescue the SDGs and deliver meaningful progress for people and the planet by 2030.

The Global SDG Indicators Database containing global, regional and country data and metadata on the official SDG indicators has been updated and accompanies this report.

[UN plan promises massive emission cuts in the construction sector – the most polluting and toughest to decarbonise](#)

Nairobi, 12 September 2023 – Rapid urbanisation worldwide means every five days, the world adds buildings equivalent to the size of Paris, with the built environment sector already responsible for 37 per cent of global emissions. A report published today by the UN Environment Programme (UNEP) and the Yale Center for Ecosystems + Architecture (Yale CEA), under the Global Alliance for Buildings and Construction (GlobalABC), offers solutions to decarbonize the buildings and construction sector and reduce the waste it generates.

Commemorating International Day of Democracy

September 15, 2023

On International Day of Democracy, we recognize a fundamental truth: development and democracy are integrally linked. Compared to authoritarian societies, democratic societies experience lower rates of conflict, higher economic growth, stronger environmental protections, and longer life expectancies – underscoring why making democratic progress is essential to all of our work at USAID.

New Report Reflects on United States’ Historic Effort to Accelerate COVID-19 Vaccine Delivery, Demand, and Uptake Globally

September 14, 2023

A new report out today details the far-reaching impact of the U.S. Government’s Initiative for Global Vaccine Access, or Global VAX, a united government effort to help countries overcome challenges to COVID-19 vaccine delivery and uptake. Since its launch in 2021, Global VAX has enabled the rapid acceleration of the global COVID-19 vaccine rollout and stemmed the devastating impacts of the pandemic in some of the world’s most vulnerable communities.

USAID, Norway, and World Economic Forum Host Bridging the Gap: Financing Africa’s Agricultural Growth

September 13, 2023

On September 18, USAID Administrator Samantha Power, Norwegian Minister of International Development Anne Beathe Tvinning, and World Economic Forum President Børge Brende will host an event on financing Africa’s agricultural growth on the margins of the opening of the UN General Assembly. This event will focus on how donor governments, development finance institutions, African governments, and the private sector can catalyze action to strengthen food value chains in Africa through innovative financing, and better support small- and medium-sized agricultural enterprises.

IMF Staff Concludes Visit to Lebanon

"Lebanon has not undertaken the urgently needed reforms, and this will weigh on the economy for years to come. The lack of political will to make difficult, yet critical, decisions to launch reforms leaves Lebanon with an impaired banking sector, inadequate public services, deteriorating infrastructure, worsening poverty and unemployment conditions, and a further widening of the income gap. Inflation remains in triple digits, further compressing real incomes, and foreign exchange (FX) reserves continued to decline in the first half of the year, including due to Banque du Liban's (BdL's) financing of quasi-fiscal operations and the large current account deficit."

- Lack of action on urgently needed reforms weighs heavily on the economy. Four years after the onset of the crisis, Lebanon continues to face enormous economic challenges, with a collapsed banking sector, eroding public services, deteriorating infrastructure, worsening poverty and unemployment conditions, and widening inequality.
- Despite some recent stability driven by a deleveraged private sector and seasonal tourism, the outlook remains difficult and unstable. While the recent policy decisions by the Banque du Liban are a welcome initial step, a permanent solution requires comprehensive policy decisions from Parliament and Government to contain the external and fiscal deficits and start the restructuring of the banking system and major SOEs.
- The mission impressed upon the authorities and parliamentarians the urgency of implementing a comprehensive reform program.

Statement by African Development Bank Group President Dr Akinwumi Adesina in response to the flood emergency in Libya

13-Sep-2023 - On behalf of the African Development Bank Group, I extend our deepest sympathies to the communities impacted by Mediterranean storm Daniel in Libya. This storm has resulted in a significant loss of life and widespread devastation, most notably in the worst hit city of Derna. Libya is a nation already facing many challenges. Sadly, the escalating number of deaths, reportedly now close to 5,300, and 10,000 missing persons—due to the collapse of upstream dams—emphasises the need for urgent reconstruction to protect lives and secure livelihoods.

Korea and Africa rally additional finance and technology for universal energy access and to make Africa world's breadbasket

ICRC to resize global footprint, maximizing reduced resources in era of declining aid budgets

The 2024 initial forecast is a 13 percent decrease from the ICRC's revised 2023 budget. ICRC delegations will face less capacity to assist those in need, given lower operational budgets and a reduction in personnel.

Press Releases

Yemen – Joint Statement on Humanitarian Situation and Funding Gap

September 16, 2023

Islamic Relief has joined 98 organisations – including Yemeni civil society, international NGOs and UN agencies – for a joint statement on the ongoing but largely ignored crisis in Yemen. Already exhausted by more than eight years of war, over 21.6 million people, 75 percent of the Yemeni population, are grappling with humanitarian...

Libya: Derna at risk of second humanitarian crisis in aftermath of floods

September 15, 2023

The Libyan city of Derna faces a second humanitarian crisis in the aftermath of the floods, with growing risk of water-borne diseases and shortages of food, shelter and medicine now posing grave risks to survivors, Islamic Relief says. There are reports of more than 11,000 people now confirmed dead from Monday's floods, but...

Libya death toll likely to more than double, Islamic Relief warns

September 13, 2023

Around 6,000 people are already confirmed killed by the devastating floods in Libya but that number is likely to double or even quadruple, Islamic Relief warns, as more bodies continue to wash up on the streets. Thousands more people are still missing and unaccounted for, and entire neighbourhoods and families have been washed...

Islamic Relief to send aid to Libya flood disaster

September 12, 2023

Islamic Relief is launching an emergency appeal to help people made homeless by unprecedented flooding in eastern Libya. At least 5200 people have died but thousands more are still missing and unaccounted for. The death toll is rising by the hour and is expected to keep rising as more information emerges. The powerful...

Morocco: Islamic Relief team distributes aid to earthquake survivors

September 12, 2023

Islamic Relief aid workers in Morocco last night began delivering blankets and mattresses to survivors in remote mountainous areas who are still sleeping outside after the devastating earthquake. Working closely with local partner organisations, the team conducted a distribution in the village of Douar Tedcharte – with more aid distributions planned today. Assessments...

Research Report

The Return on Investing in Children: Helping Children Thrive

September 14, 2023

The federal government invests more than \$500 billion annually in children through direct cash payments, including tax credits, and in-kind goods such as childcare, education, food subsidies, and healthcare coverage. This represents about 10 percent of the federal budget. Research shows these investments, which are often used to combat poverty, can have large short- and long-term payoffs for the children receiving the benefits and society at large. Though the payoff of any one investment can be difficult to assess, strong evidence suggests that investments that reduce poverty and direct resources at very young children have particularly high returns.

Chief Economists: Geoeconomic Factors Undermine SDG Progress Amid a Weak Global Economy

News 15 Sep 2023

- Most economists expect the global economy to weaken in the coming year, as the world grapples with political and financial volatility.
- Almost six in 10 believe the economic outlook will undermine progress towards meeting the UN Sustainable Development Goals, with 74% saying geopolitical tensions will have the same effect.
- Experts warn that developing countries will face an increasing trade-off between development and climate action.
- For more information, read the September 2023 Chief Economists Outlook [here](#).
- Learn more about the Sustainable Development Impact meetings 2023 [here](#) and share on social media using the hashtag #SDIM23.

Gates Foundation Goalkeepers Report Says Seven Innovations Could Save 2 Million Mothers and Babies by 2030

Melinda French Gates and Bill Gates call for urgent action to advance progress on the UN's Sustainable Development Goals and shine a spotlight on reducing maternal and child mortality

SEATTLE (September 12, 2023) – The Bill & Melinda Gates Foundation today released its seventh annual Goalkeepers Report, describing where the world has collectively fallen short at the halfway point for achieving the United Nations Sustainable Development Goals (SDGs), and where innovation and investment can fuel progress, particularly in the fight against the global epidemic of maternal and child mortality.

Co-authored by foundation Co-chairs Melinda French Gates and Bill Gates, **the report highlights new data that shows the potential of scaling up global access to seven innovations and practices that address the leading causes of maternal and newborn deaths.** "By making new innovations accessible to those who need them most, 2 million additional lives could be saved by 2030, and 6.4 million lives by 2040. That's 2 million families spared an unimaginable heartbreak—and 2 million more people who can shape and enrich our world," they write...

AMA Journal of Ethics

Volume 25, Number 9: E651-717

<https://journalofethics.ama-assn.org/issue/palliative-psychiatry>

Palliative Psychiatry

All general medical, surgical, and psychiatric patients deserve palliative approaches to their care. Palliative psychiatry, especially, deserves clinical and ethical attention because of its promise as an emerging field renewing attention to patients whose illnesses—such as treatment resistant depression—and symptoms—such as persistent suicidality—challenge our faith in health care as a life-affirming source of hope. Responding with care to vulnerabilities and needs of these patients requires prioritizing symptom management, relieving suffering, focusing on quality of life, reducing harms of aggressive interventions, and minimizing use of physical or chemical force. This theme issue investigates how inquiry into palliative psychiatry can reinvigorate core philosophy of medicine investigations into what health care is for.

Anti-Trafficking Review

No. 20 (2023)
<https://antitraffickingreview.org/index.php/atrjournal/issue/view/31>

Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.

Special Issue – Home and Homelessness

This special issue of Anti-Trafficking Review examines the links between housing, homelessness, migration, and exploitation. With contributions from New Zealand, Australia, Hong Kong, Malaysia, Singapore, the United States, and Ecuador, it critiques immigration, criminal justice, and social welfare

systems that are failing migrants, survivors of trafficking, and other marginalised groups. It demonstrates how these systems create conditions for exploitation and uplifts the voices of people struggling to find not just a roof over their head but a home.

[Fair division of indivisible goods: Recent progress and open questions](#)

Georgios Amanatidis, Haris Aziz, Georgios Birmpas, Aris Filos-Ratsikas, ... Xiaowei Wu

Article 103965

Abstract

Allocating resources to individuals in a fair manner has been a topic of interest since ancient times, with most of the early mathematical work on the problem focusing on resources that are infinitely divisible. Over the last decade, there has been a surge of papers studying computational questions regarding the indivisible case, for which exact fairness notions such as envy-freeness and proportionality are hard to satisfy. One main theme in the recent research agenda is to investigate the extent to which their relaxations, like maximin share fairness (MMS) and envy-freeness up to any good (EFX), can be achieved. In this survey, we present a comprehensive review of the recent progress made in the related literature by highlighting different ways to relax fairness notions, common algorithm design techniques, and the most interesting questions for future research.

Research articleOpen access

[Discovering agents](#)

Zachary Kenton, Ramana Kumar, Sebastian Farquhar, Jonathan Richens, ... Tom Everitt

Article 103963

Abstract

Causal models of agents have been used to analyse the safety aspects of machine learning systems. But identifying agents is non-trivial – often the causal model is just assumed by the modeller without much justification – and modelling failures can lead to mistakes in the safety analysis. This paper proposes the first formal causal definition of agents – roughly that agents are systems that would adapt their policy if their actions influenced the world in a different way. From this we derive the first causal discovery algorithm for discovering the presence of agents from empirical data, given a set of variables and under certain assumptions. We also provide algorithms for translating between causal models and game-theoretic influence diagrams. We demonstrate our approach by resolving some previous confusions caused by incorrect causal modelling of agents.

[Regulatory compliance and readability of informed consent forms in industry-sponsored drug development clinical trials](#)

Nahathai Dukaew, et al.

Abstract

Background/Aims

An informed consent form is essential in drug development clinical trials. This study aimed to evaluate regulatory compliance and readability of informed consent forms currently being used in industry-sponsored drug development clinical trials.

Methods

This descriptive, cross-sectional study evaluated the informed consent forms of industry-sponsored drug development clinical trials conducted at the Faculty of Medicine, Chiang Mai University, between 2019 and 2020. The informed consent form's compliance with the three major ethical guidelines and regulations (i.e. International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use E6(R2) Good Clinical Practice; Declaration of Helsinki; and the revised Common Rule) were analyzed. The document length and the readability scores (using Flesch Reading Ease and Flesch-Kincaid Reading Grade) were assessed.

Results

Of 64 reviewed informed consent forms, the average page length was 22.0 ± 7.4 pages. More than half of their length was mainly devoted to three elements: trial procedures (22.9%), risks and discomforts (19.1%), and confidentiality and the limit of confidentiality (10.1%). Although most of the required elements of the informed consent form content were included in most informed consent forms, we

identified four elements with often missing information in the form: aspects of research that are experimental (n = 43, 67.2%), involvement of whole-genome sequencing (n = 35, 54.7%), commercial profit sharing (n = 31, 48.4%), and posttrial provisions (n = 28, 43.8%).

Conclusion

The informed consent forms in industry-sponsored drug development clinical trials were long but incomplete. Our findings draw attention to ongoing challenges in industry-sponsored drug development clinical trials, where deficient informed consent form quality continues to exist.

Forced Migration Review (FMR)

June 2023

<https://www.fmreview.org/rights-mobilisation>

Mobilising for rights in the MENA region

In this special issue on 'Mobilising for rights in the MENA region', we look at how people are working to ensure that the rights of forced migrants are respected and strengthened in the Middle East and in North Africa. As the introductory article says, "The authors show the importance of acts of mobilisation in different locations and contexts. However, they do not shy away from reflecting on the many obstacles that often confront such efforts."

[Sweden: Government to Investigate Amending Public Order Act Following Terror Threats over Qur'an Burnings](#)

On August 18, 2023, the Swedish government announced that it had appointed a special investigator (särskild utredare) to review the legal conditions for amending the 1993 Public Order Act with the aim

of restricting public gatherings over national security concerns. The announcement comes on the heels of recent Qur'an burnings in Sweden and an appeals court decision ... Continue reading "Sweden: Government to Investigate Amending..."

Health and Human Rights

Volume 25, Issue 1, June 2023,
<https://www.hhrjournal.org/special-section-global-voices-for-global-equity-expanding-right-to-health-frameworks/>

Special Section: Global Voices for Global Justice: Expanding Right to Health Frameworks

...The papers in this special section work together to move toward a global social medicine for the 22nd century. They envision a global social medicine that confronts and moves beyond the traditionally colonial, xenophobic, heteronormative, patriarchal, gender-binary-bound, capitalist, and racist histories of the fields of global health and human rights. They seek to instantiate a global social medicine that centers knowledge and experiences from the Global South and works toward social justice and health equity at scale. In this special section, the authors are particularly interested in understanding, challenging, and expanding our perspectives and enactments of the right to health. Unlike neoliberal perspectives on health that often limit their explanatory capacity to how individuals behave in the world, the papers here move beyond the focus on lifestyles and on the phantasmagoria of a sovereign subject with supposedly free agency. Instead, authors work toward critical consciousness that accounts for structural processes—with their inequities and disruptions, as well as their effects on individuals—and how this consciousness can open new horizons for collective transformation and social emancipation in health...

International Review of the Red Cross

No. 923 June 2023

<https://international-review.icrc.org/reviews/irrc-no-923-organized-crime>

Organized Crime [31 articles]

Organized criminal actors generate trillions of dollars in earnings every year – while deeply undermining peace and security. Organized crime generates and contributes to armed violence all around the world, in the context of both armed conflict and other situations of violence. The human and humanitarian costs are astronomical: countless lives lost and disappeared, not to mention lost livelihoods, restricted access to essential services, and corrosion of institutions. This edition of the Review examines the intersections among organized crime, armed conflict and other situations of violence, looking at the vexing legal, ethical and operational questions this nexus raises.

Special Issue on Gender

This issue of the *Journal on Education in Emergencies (JEiE)* offers an in-depth analysis of the unique gendered effects humanitarian emergencies have on boys and girls. It adds to more than two decades of EiE research that demonstrates how conflict and crisis exacerbate existing political, economic, and cultural barriers to education access and widen the gender gap in educational attainment.

World Heritage Review

World Heritage n°103 – September 2023

<https://whc.unesco.org/en/review>

World Heritage

... This issue of *World Heritage* magazine features African heritage leaders who are empowering peers and creating positive ripple effects from Egypt to Mozambique. A report on climate change details the critical benefits provided by World Heritage forests notably through carbon absorption, with one caveat – their capacity will continue to decline unless we act now. A compelling story comes from Havana, Cuba, where a major UNESCO programme Transcultura is blending tangible heritage, intangible practices and contemporary creativity, true to the way culture intersects in the local communities...

Predictors of COVID-19 Vaccine Acceptability Among Refugees and Other Migrant Populations: A Systematic Scoping Review

Yasaman Yazdani, Poojitha Pai, Shahab Sayfi, Arash Mohammadi, Saber Perdes, Denise Spitzer, Gabriel Fabreau, Kevin Pottie

medRxiv 2023.09.15.23295608; doi: <https://doi.org/10.1101/2023.09.15.23295608>

Abstract

Objective. This study aimed to map the existing literature to identify predictors of COVID-19 vaccine acceptability among refugees, immigrants, and other migrant populations.

Methods. A systematic search of Medline, Embase, APA PsycInfo and Cumulative Index of Nursing and Allied Health Literature (CINAHL) was conducted up to 31 January 2023 to identify the relevant English peer-reviewed observational studies. Two independent reviewers screened, selected studies, and extracted data.

Results. We identified 34 cross-sectional studies, primarily conducted in high income countries (76%). Lower vaccine acceptance was associated with mistrust in the host countries' government and healthcare system, concerns about the safety and effectiveness of COVID-19 vaccines, limited knowledge of COVID-19 infection and vaccines, lower COVID-19 risk perception, and lower integration level in the host country. Female gender, younger age, lower education level, and being single were associated with lower vaccine acceptance in most studies. Additionally, sources of information about COVID-19 and vaccines and previous history of COVID-19 infection, also influence vaccine acceptance. Vaccine acceptability towards COVID-19 booster doses and various vaccine brands were not adequately studied.

Conclusions. Vaccine hesitancy and lack of trust in COVID-19 vaccines became significant public health concerns within migrant populations. These findings may help in providing information for current and future vaccine outreach strategies among migrant populations.

Vaccination coverage and adverse events following a reactive vaccination campaign against hepatitis E in Bentiu displaced persons camp, South Sudan

Robin C Nesbitt, Vincent Kinya Asilaza, Etienne Gignoux, Aybüke Koyuncu, Priscillah Gitahi, Patrick Nkemenang, Jetske Duncker, Zelig Antier, Melat Haile, Primitive Gakima, Joseph F Wamala, Frederick Beden Loro, Duol Biem, Monica Rull, Andrew S Azman, John Rumunu, Iza Ciglenecki

medRxiv 2023.09.15.23295601; doi: <https://doi.org/10.1101/2023.09.15.23295601>

Abstract

Introduction: Hepatitis E (HEV) genotypes 1 and 2 are a common cause of jaundice and acute viral hepatitis that can cause large-scale outbreaks. HEV infection is associated with adverse fetal outcomes and case fatality risks up to 26% among pregnant women. An efficacious three-dose recombinant vaccine (Hecolin®) has been licensed in China since 2011 but until 2022, had not been used for outbreak response despite a 2015 WHO recommendation. The first ever mass vaccination campaign against hepatitis E in response to an outbreak was implemented in 2022 in Bentiu internally displaced persons camp in South Sudan targeting 27,000 residents 16-40 years old, including pregnant women.

Methods: We conducted a vaccination coverage survey using simple random sampling from a sampling frame of all camp shelters following the third round of vaccination. For survey participants vaccinated in the third round in October, we asked about the onset of symptoms experienced within 72 hours of vaccination. During each of the three vaccination rounds, passive surveillance of adverse events following immunisation (AEFI) was put in place at vaccination sites and health facilities in Bentiu IDP camp.

Results: We surveyed 1,599 individuals and found that self-reported coverage with one or more dose was 86% (95% CI 84-88%), 73% (95% CI 70-75%) with two or more doses and 58% (95% CI 55-61%) with three doses. Vaccination coverage did not differ significantly by sex or age group. We found no significant difference in coverage of at least one dose between pregnant and non-pregnant women, although coverage of at least two and three doses was 8 and 14 percentage points lower in pregnant women. The most common reasons for non-vaccination were temporary absence or unavailability, reported by 60% of unvaccinated people. Passive AEFI surveillance captured few mild AEFI, and through the survey we found that 91 (7.6%) of the 1,195 individuals reporting to have been vaccinated in October 2022 reported new symptoms starting within 72 hours after vaccination, most commonly fever, headache or fatigue.

Conclusions: We found a high coverage of at least one dose of the Hecolin vaccine following three rounds of vaccination, and no severe AEFI. The vaccine was well accepted and well tolerated in the Bentiu IDP camp community and should be considered for use in future outbreak response.

[Prevalence and predictors of self-medication for COVID-19 among slum dwellers in Jinja City, Uganda](#)

Prossy Nakito, Angela N. Kisakye, Abel Wilson Walekhwa, Gloria Tumukunde, Charity Mutesi, Nicholas Muhumuza, Carolyne Nyamor, David Musoke, Geoffrey Musinguzi, Dathan M. Byonanebye
medRxiv 2023.09.08.23295267; doi: <https://doi.org/10.1101/2023.09.08.23295267>

Self-medication is a serious public health concern globally and is more prevalent in underserved populations, especially in resource limited settings. The lack of effective treatment for COVID-19 and poor access to healthcare were drivers of self-medication. We investigated the prevalence and associated factors with self-medication for COVID-19 among slum dwellers in a Ugandan slum.
