The Sentinel

Health, Human Rights, Humanitarian Action, Heritage-Education-Literacy, Climate-Environment, Development, Peace

Period ending 15 Nov 2026 :: Number 627

This weekly digest is intended to aggregate and distill key content from a broad spectrum of practice domains and organization types including UN system agencies, IGOs/NGOs, governments, academic and research institutions, consortiums and collaborations, foundations, and commercial organizations. We also monitor a spectrum of peer- reviewed journals and general media channels. The Sentinel's geographic scope is global/regional but selected country-level content is included. We recognize that this spectrum/scope yields an indicative and not an exhaustive product.

The Sentinel is published as a PDF, scheduled for release each weekend. The PDF is posted at https://ge2p2-center.net/.

Request email delivery of the pdf:
If you would like to receive the PDF of each edition via email [Constant Contact], please send your request to david.r.curry@ge2p2global.org

COP31 – Conference & Programme

Programme Overview

The Programme of COP31 brings together global leaders, policymakers, scientists, businesses, civil society, and youth to **accelerate climate action and strengthen international cooperation.**

Throughout the conference, a wide range of sessions, dialogues, and high-level meetings will address the most pressing climate challenges while promoting practical solutions and partnerships. The programme is designed to support constructive dialogue, foster consensus among nations, and translate commitments into tangible action.

Key thematic areas include clean energy transition, nature and biodiversity protection, sustainable food **systems, resilient cities and infrastructure, climate finance, and technological innovation**. Special sessions will also highlight the role of youth, education, and inclusive development in building a sustainable future.

Taking place in Antalya, COP31 will serve as a global platform where ideas, policies, and technologies converge to advance the goals of the Paris Agreement and accelerate collective efforts toward limiting global warming and strengthening climate resilience.

2025 WHO health and climate change global survey report
13 November 2026
Overview

The 2025 WHO Health and Climate Change Global Survey report provides a global assessment of country-level progress in addressing the health impacts of climate change and developing climate-resilient and low-carbon health systems. Drawing on responses from 146 countries, this edition expands the scope of previous surveys and establishes a baseline for monitoring the WHO Global Action Plan on Climate Change and Health and the climate-related outcomes of WHO's Fourteenth General Programme of Work.

The findings indicate that national governance structures, vulnerability and adaptation assessments, and climate and health planning have expanded, but implementation remains limited. More than 90% of countries have designated climate and health focal points, while over half have national strategies or health adaptation plans. However, insufficient financing, limited workforce capacity and inadequate monitoring continue to constrain progress. The transition towards low-carbon and sustainable health systems remains at an early stage, with persistent inequalities affecting lower-income countries. The report highlights the need to strengthen implementation, expand access to financing and build health system resilience.

Disaster Financing

UN launches Disaster Risk Financing Platform at COP31 to make humanitarian responses faster and more predictable
The UN DRF Platform is a joint initiative among the Food and Agriculture Organization of the United Nations (FAO), IOM, OCHA, UNICEF, the United Nations Refugee Agency (UNHCR), and WFP.
12/11/2026
Antalya, Türkiye – The United Nations today launched a new initiative at the 31st United Nations Climate Change Conference (COP31) in Antalya, Türkiye, **aiming to secure access to more than $3 billion in risk financing to protect 75 million people and their livelihoods from potential climate shocks and natural hazards by 2030.**

Bringing together six UN agencies, the **UN Disaster Risk Financing (DRF) Platform aims to make disaster response funding more predictable, increase the availability of funding for early action during major crises, and maximize the impact of every dollar by combining available resources with private sector support.**

The platform will enable agencies to share expertise, pool data, and coordinate joint solutions to expand the UN's use of pre-arranged financing. Combining robust data and predictive analysis with funds will help governments and agencies help turn early warnings into anticipatory actions. This will strengthen emergency responses before, during, and after disasters.

The platform and collaboration across agencies will also ensure funding is used more efficiently and strengthen the resilience of vulnerable communities to future shocks. Collaboration with the insurance industry and financial markets will be key to reducing costs as financing scales up. The platform will allow all agencies to fully engage while maintaining programmatic and

operational independence…

Yet pre-arranged financing still accounts for less than two percent of global humanitarian financing, which falls far short of the scale needed. By working together, members of the UN DRF Platform can combine their expertise and resources to help close this gap...

Treaty on "Killer Robots"

Türk calls on States to agree to international treaty banning 'killer robots'
Office of the High Commissioner for Human Rights
13 November 2026
GENEVA - UN Human Rights Chief Volker **Türk today called on States to urgently agree to the development of a treaty regulating autonomous weapon systems**, as they prepare to meet at the 7th Review Conference of the Convention on Certain Conventional Weapons next week.

Given the rapid pace of technological development and the risk that autonomous weapon systems could become widely accessible in the near future**, the window to develop a treaty effectively to regulate these increasingly powerful systems in advance is closing rapidly, he said.**

"The international community has critical choices to make, right now, about the future of armed conflicts and the role of human beings in decisions over the use of force**. I call on States to urgently agree on binding international rules to regulate autonomous weapons and protect human lives – before it is too late," said Türk.**

"A machine must never have the power to decide whether a human being survives or dies."

Autonomous weapon systems raise profound concerns for the right to life, human dignity and accountability, he said. The gravest concern is that they may allow force to be applied without sufficient human judgement over who is targeted and how decisions are made.

In regulating the use of these systems, **the High Commissioner called for prohibitions on autonomous weapons that themselves target people – either by design or in practice, and for a ban on weapons whose functions and effects cannot be fully understood, predicted, explained and controlled by human users.** Where foreseeable risks of grave violations or dilution of accountability cannot be prevented, outright prohibition is the proper response from the human rights perspective, he said.

"Human judgement and responsibility must remain at the centre of decisions involving the use of force. Machines cannot understand the value of human life, assess context in the way humans can, or make the complex judgements required by international law. Nor can objects be held accountable when things go wrong," the High Commissioner said.

Nor should lethal and less-lethal autonomous weapons ever be used in policing contexts, he added. Machines are unable to conduct the continuous, context-specific assessment of the necessity to use force and availability of other less harmful means. As such, their use of force would invariably be unlawful. In addition to the right to life, **the use of autonomous weapons against people in policing raise serious concerns regarding the right to peaceful assembly, non-discrimination, accountability and the right to remedy.**

If not prohibited, anti-personnel autonomous weapons will inevitably proliferate and become more accessible to not only States, but a wider range of actors, including non-State armed groups and criminal organisations, Türk said, adding that the dangers they present cannot be overstated.

"In order to protect the right to life of their populations, States must take measures to reduce the proliferation of potentially lethal weapons for unauthorized use," he said. "**Prohibiting the development or deployment of autonomous weapons designed or used to target human beings would be the most effective way to give effect to this obligation."**

This year's Review Conference, held every five years, will be particularly significant for the future work on autonomous weapons.

"The choice before States is clear," Türk said. "They need to seize this moment to begin negotiations on a legally binding instrument containing clear prohibitions and restrictions. The longer the international community waits, the more difficult it will become to establish meaningful safeguards – and it may be too late."

Human Rights Council – UPR

Human Rights Council reschedules human rights review of the United States of America; regrets "continued non-cooperation" with UPR mechanism
10/11/2026
GENEVA - The Human Rights Council adopted a **decision on "continued non-cooperation of a State under review with the universal periodic review mechanism"** at an organizational meeting held on 10 November 2026 at the Palais des Nations, Geneva. The universal periodic review (UPR) of the United States of America had been rescheduled for 10 November 2026 during the 53rd session of the Working Group on the UPR, following its non-participation on the original scheduled date of 7 November 2025 during the 50th session.

While expressing regret at the decision of the United States of America ("the State under review") not to participate in the UPR on the scheduled date during the 50th session of the Working Group (3-14 November 2025) and on the rescheduled date during its 53rd session (2-13 November 2026), **the Human Rights Council called upon the State under review to "resume its cooperation with the universal periodic review mechanism, in accordance with General Assembly resolution 60/251 and Human Rights Council resolution 5/1 and the annex thereto."**

The Council further requested "the President of the Human Rights Council to continue to take all appropriate steps and measures, in accordance with his mandate, **to urge the State under review to resume its cooperation with the universal periodic review mechanism** and to report on the results of his efforts to the Council at its regular sessions."…

Gaza – Winter

Joint Foreign Ministers Statement on Gaza
15 November 2026 *Press release*
We, the **Foreign Ministers of Australia, Canada, Italy and the United Kingdom, are clear that**

as winter takes hold in Gaza, the humanitarian situation on the ground is dire. The recent floods have brought further suffering - and this was only the first storm of the winter.

People in Gaza desperately need shelter and humanitarian assistance. Yet 150,000 tents and other vital supplies are being held at the border and prevented from entering Gaza. This situation is entirely reversible – and there is still time to act before the winter fully sets in.

So we today urge the Government of Israel to stop the delays now and allow immediate, rapid and unimpeded humanitarian access throughout Gaza. The crossings must be opened, and the tents allowed in. Dual-use items necessary for humanitarian operations and early recovery must be granted entry before it is too late.

And all parties must implement the Comprehensive Plan for Gaza, respecting the ceasefire and their obligations under international humanitarian law, and allowing aid to reach the people who need it.

NRC Leadership

Secretary General Jan Egeland to retire from Norwegian Refugee Council
Press release
09. Nov 2026 | Global
After more than 13 years as Secretary General of the Norwegian Refugee Council (NRC), and more than 45 years as a humanitarian and human rights worker, Jan Egeland will retire in mid-June 2027.

"I informed the NRC Board earlier this year that I will retire this coming summer after 13 very rewarding years at the helm of NRC. I will continue with all my strength as SG until my successor is in place by next summer," said Egeland.

"We are challenged like never before in delivering assistance and protection to displaced people and conflict victims in 39 countries. Thanks to the courageous efforts of our more than 14,000 humanitarian colleagues, NRC was able to serve more than 10 million conflict and crisis-stricken people last year.

"I very much look forward to working with all our NRC and NORCAP teams to reach communities in need as effectively and efficiently as possible until my successor is in place next year," said Egeland.

"Jan's contribution to NRC and to the cause of displaced people has been immense," said NRC Board Chair Kristin Skogen Lund.

"He has led the organisation from the fore, regularly visiting colleagues on the frontlines of the world's most severe humanitarian crises, and doing all he can to draw attention to the suffering of displaced communities. During his time NRC has become one of the world's largest and most effective frontline organisations serving displaced people and conflict victims. I am glad he will remain in post until we have recruited his successor next year."

ICJ – 2026 Carnegie Wateler Peace Prize

The International Court of Justice awarded the 2026 Carnegie Wateler Peace Prize for its achievements in peaceful dispute settlement

THE HAGUE, 10 November 2026. HE Judge Iwasawa Yuji, President of the International Court of Justice, yesterday accepted the 2026 Carnegie Wateler Peace Prize on behalf of the Court. The Carnegie Foundation and the Peace Prize Committee awarded the prize to the Court **for its contribution to the peaceful settlement of disputes, the prevention of conflict escalation and the promotion of international stability.**

Receiving the award at the Peace Palace in The Hague, President Iwasawa said the prize is an opportunity to recognize the people who have served the institution throughout its history and the States that have placed their trust in the Court:

> "…The Court receives this prize with gratitude and a strong sense of responsibility. It is a recognition of the work carried out over many decades, and an encouragement to continue that work in the years ahead.
>
> The establishment of the International Court of Justice in 1945 reflected the belief that international law and international institutions could help prevent the recurrence of the tragedies of war. The Court was entrusted with a specific role in that wider effort. The Court does not negotiate peace agreements. It provides States with a forum in which they can submit their disputes to an independent and impartial judicial institution and obtain a decision based on international law. The Court also provides advisory opinions on legal questions. In performing these tasks, the Court contributes to the peaceful settlement of disputes and to the rule of law in international relations.
>
> Of course, the Court cannot resolve every disagreement between States. Nor can judicial decisions alone ensure lasting peace. But the submission of a dispute to judicial settlement is in itself an expression of a commitment to peaceful means. By clarifying the legal rights and obligations of States under international law, the Court helps reduce uncertainty, prevent the escalation of disputes, and provide a basis for dialogue and co-operation.
>
> The Court's contribution to peace is therefore both important and limited. It is important because respect for international law is essential to peaceful relations between States. At the same time, lasting peace ultimately depends on the willingness of States to respect their legal obligations and resolve their differences through peaceful means.
>
> The Court's role is not to achieve a particular political outcome, but to apply international law independently and impartially. By fulfilling that responsibility, the Court makes its contribution to international peace and justice.
>
> The Court was thus established in pursuit of a profound ambition. The fact that the Court is receiving this prize today, after 80 years of operation, demonstrates that the vision of its founders was no empty promise and that our predecessors did not toil in vain.
>
> This prize is also an opportunity to recognize the people who have served the Court throughout its institutional history../"

…The Carnegie Wateler Peace Prize has been awarded since 1931 to distinguished individuals and institutions that have made outstanding contributions to peace, international co-operation and the peaceful resolution of conflicts.

President Iwasawa accepted the award during the High-Level Forum, *A Reaffirmed Commitment to Promoting, Hosting and Advancing Peace through Law*, marking the eightieth anniversary of the Court, organized by the Ministry of Foreign Affairs of the Netherlands, the Municipality of The Hague and the Carnegie Foundation.

Perspective
Discovery as public infrastructure: Renewing the social contract for science
Sergio Carbajo and others
Scientific capacity built over generations is being weakened by abrupt political disruption just as discovery is becoming faster, more convergent, globally networked, and more socially consequential.

Restoring funding and protecting scientific institutions are urgent, but not sufficient: **the postwar compact that sustained discovery before its uses were known must be renewed for 21st-century conditions and made resilient to arbitrary disruption**.

We propose the Discovery Compact, a renewed social contract among government, science, industry, and the public that treats discovery as shared public infrastructure—capacity a plural society builds, tends, and holds in common across generations. It is organized around five criteria: (i) sustaining discovery as national infrastructure; (ii) enabling institutions to move at speed without sacrificing rigor; (iii) building scientific capacity through people, openness, and mobility; (iv) translating discovery without depleting its source; and (v) securing democratic legitimacy and institutional resilience.

Together, these criteria direct policy toward durable scientific capacity and insulate against indiscriminate deregulation, compulsory commercialization, arbitrary institutional disruption, and political control of scientific judgment. This Perspective is not a legislative template but an invitation to a national and international process of protecting and renewing the institutions and infrastructure through which societies discover, generate, protect, and prepare.

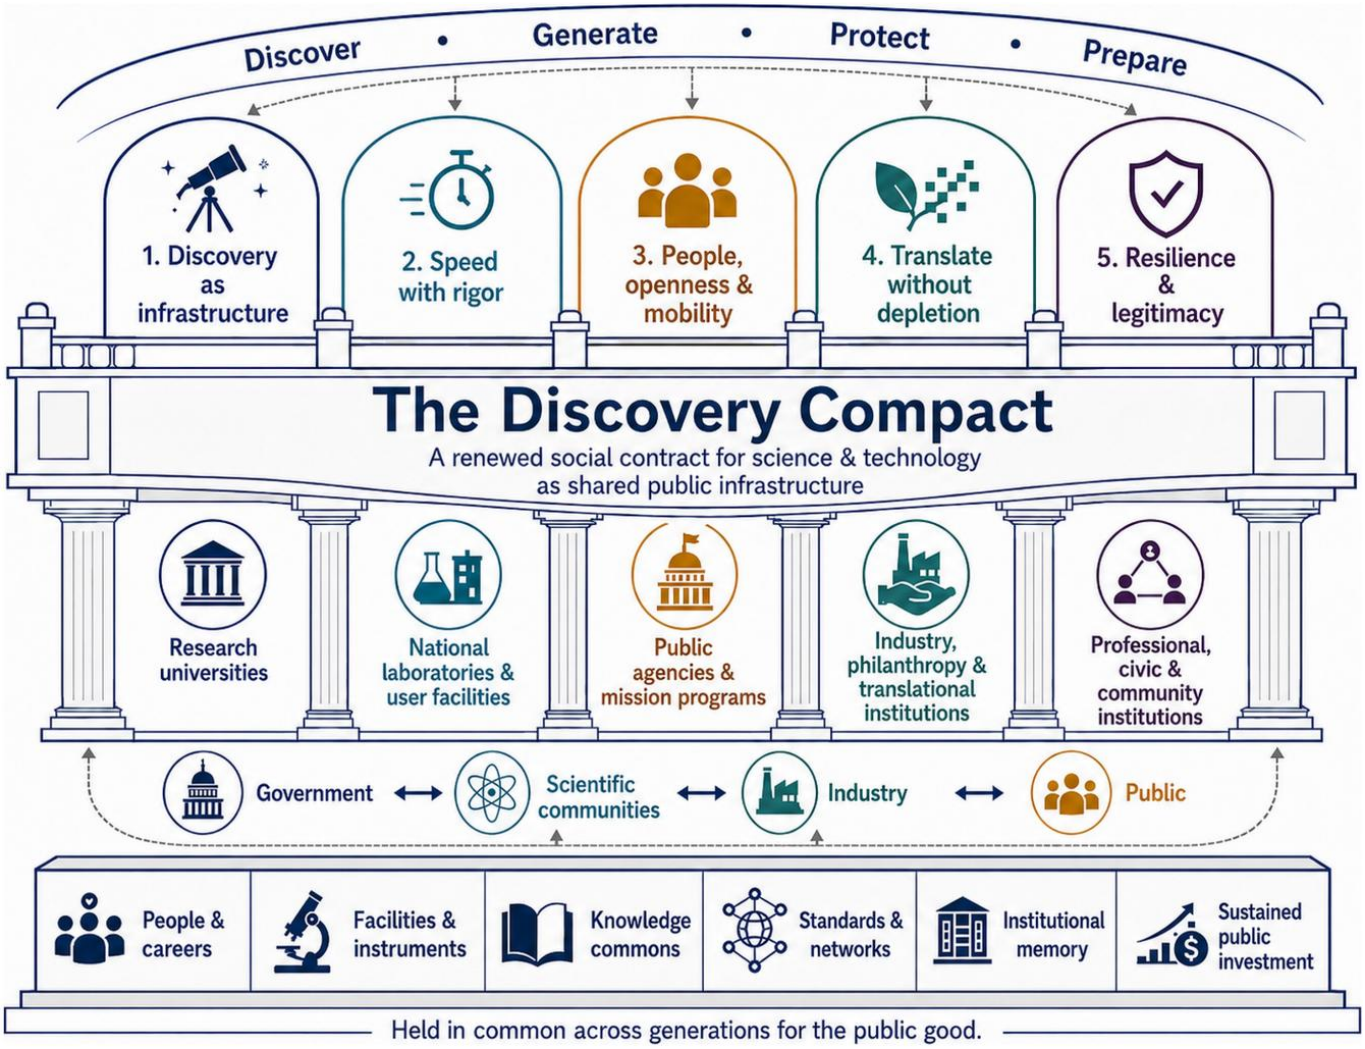

[Excerpt]
… ***Renewal by design***
The postwar compact was transformative because it linked scientific freedom to public responsibility and translated long-term investment into national capability. Its institutions remain essential, but they were not designed for the conditions now confronting them: accelerating and convergent fields, globally mobile talent, administrative saturation, geopolitical pressure, rapidly emerging technologies, polarized trust, and the possibility of abrupt institutional disruption.

The answer is neither to abandon the system nor to rebuild it exactly as it was. The Discovery Compact sets out five principles for revival. They are criteria against which programs, institutions, and reforms should be judged.

Do they sustain discovery as infrastructure?
Do they move at the speed of science without abandoning rigor?
Do they cultivate people, openness, and mobility?
Do they translate knowledge without consuming the source of discovery?
Do they create democratic legitimacy and institutions capable of surviving political change?

Developing the compact will require a process as important as the resulting policies. Interdisciplinary training that connects technical work with the humanities, social sciences, and law should be treated as part of scientific capability rather than as an optional supplement. Early- and mid-career researchers, including those considering leaving or recently pushed out of the research enterprise, should be treated as sources of strategic insight: participants in advisory structures, roadmapping exercises, program design, and evaluations of how policies operate in practice. International partners must be involved from the outset in shaping the norms, institutions, and collaborations of a shared scientific future.

We have an opportunity to claim the future by deliberately redesigning the discovery enterprise rather than allowing its foundations to erode by default. The work of discovery is never finished, but the institutions that allow free societies to pursue it are not self-renewing. They must be rebuilt deliberately for every new age.

The Discovery Compact. A renewed social contract for science and technology that treats discovery as shared public infrastructure. Five design principles guide the compact: sustaining discovery capacity,

enabling speed with rigor, centering people and openness, translating knowledge without depleting its source, and building institutional resilience and democratic legitimacy. These principles are supported by an institutional architecture spanning universities, national laboratories, public agencies, translational organizations, and civic and professional institutions, and by shared foundations including people, facilities, knowledge commons, standards, institutional memory, and sustained public investment.

UNHCR concerned by reports of clashes at Yemen's Kharaz refugee camp
15 November 2026
GENEVA - UNHCR is gravely concerned by reports that clashes have reached Kharaz refugee camp in Lahj Governorate, southwestern Yemen, placing some 9,600 refugees at increased risk.
The deteriorating security situation has already forced hundreds of refugee families to flee from ongoing hostilities within Yemen, including in and around Kharaz refugee camp. The fighting is further constraining the ability of UNHCR and its partners to provide protection and humanitarian assistance.
We call on all parties to take all necessary measures to ensure the safety of refugees, asylum-seekers and other civilians, respect the civilian and humanitarian nature of Kharaz camp and abide by their obligations under international humanitarian law. UNHCR further calls for safe and unimpeded access for humanitarian organizations to provide emergency aid to refugees and host communities, as well as safe passage for refugees who leave Kharaz camp for other locations…

Making transformations work for all: An intergenerational dialogue on the future
12 November 2026 - Who gets to shape the future? This was the question at the center of discussions as UN DESA organized an intergenerational Global Policy Dialogue on 22 October, bringing together members of the UN High-level Advisory Board on Economic and Social Affairs (HLAB) and youth from around the world. The event took place on the heels of the release of "The World Social Report 2026: The New Economics of Social Inclusion: Making Transformations Work for All."

11-11-2026 | DESA

Climate crisis could push 141 million more women into extreme poverty

11 November 2026 - More than one in three women and girls worldwide – roughly 1.5 billion – live in so-called "climate hotspots", where high exposure to hazards such as cyclones and droughts combine with insecure jobs and deep gender inequality. That's according to "Gender Equality in the Age of Climate Crisis", a new fact sheet issued by UN Women at the COP31 climate conference in Antalya, Türkiye, on Tuesday.

Joint Statement: Six months on, accessing hard-to-reach communities key to halting Ebola outbreak
Statement attributable to Africa CDC, UNFPA, UNICEF, WFP, WHO.
ADDIS ABABA, GENEVA, KINSHASA, NEW YORK, ROME - Six months into the Ebola outbreak caused by Bundibugyo virus in the Democratic Republic of the Congo, significant progress has been made in bringing lifesaving services closer to affected communities, despite immense challenges. However, fueled by ongoing conflict, displacement and humanitarian needs, the outbreak continues to expand, particularly in affected areas.

Oil Market Report - November 2026
13 November 2026
The oil market is showing tentative signs of rebalancing, with global oil supplies surpassing demand for the first time since the outbreak of the war in Iran. Observed oil inventories rose by 52 mb, or 1.7 mb/d, in October as Gulf exports recovered much faster than global oil demand. North Sea Dated crude oil prices plunged by more than 30% from a high of $136/bbl on 8 October to around $93/bbl at the time of writing but remained $22/bbl above pre-war levels.
Global oil supplies surged by 2.3 mb/d to 105.4 mb/d in October, lifting output by an extraordinary 5.3 mb/d since August. The sharp increase narrowed the year-on-year output decline to 2.9 mb/d, compared with an average 8 mb/d loss over the March-September period. Despite continued attacks on tankers, Gulf oil exports, excluding Oman, reached 18.4 mb/d last month, 26% below pre-war levels. The recent increase was led by crude, with flows rising to 15 mb/d, equivalent to 82% of pre-war levels in October. The higher export rates resulted in a significant uplift to our expectations for global oil supply for the remainder of the year, with 4Q26 estimates raised by 3.3 mb/d…

COP31: New network aims to unlock carbon finance for developing countries
UNCTAD/PRESS/PR/2026/019 — Geneva, Switzerland
Key takeaways

:: A new global network launching at COP31 aims to channel more carbon market investment towards climate projects, particularly in developing countries.
:: Carbon pricing is expanding, but fragmented markets, inconsistent standards and concerns over credit quality are limiting the potential to mobilize finance.
:: Convened by UN Trade and Development (UNCTAD), the Network will bring together exchanges, financial institutions and other market actors to improve transparency, strengthen trust and facilitate cross-border transactions.

Nigeria
Shortages of diphtheria treatment put thousands of children at risk in Nigeria
Press Release 13 Nov 2026
Abuja — Médecins Sans Frontières (MSF) warns that shortages of diphtheria antitoxin (DAT) – the critical drug for treating diphtheria – together with low immunisation coverage, are fuelling transmission of the disease and undermining efforts to control the outbreak in northern Nigeria. This puts thousands of children at risk of severe illness and death.
To save lives and help contain the outbreak, MSF urges federal and state authorities, donors, and international partners to urgently secure existing supplies of DAT, vaccines, and other essential medicines. Timely clearance at ports of entry and rapid distribution across affected areas in northern Nigeria must also be ensured.
"The global shortage of diphtheria antitoxin is becoming a matter of life and death," says Dr David Kizito, MSF medical coordinator in Nigeria. "Our stocks are dangerously low, and we risk being unable to treat children and save lives as the outbreak continues."…

Ebola in DRC: Persistent gaps between resources and action remain six months on
Press Release 12 Nov 2026
GENEVA – Democratic Republic of the Congo (DRC), Médecins Sans Frontières (MSF) warns that the second largest Ebola outbreak on record remains out of control. A troubling disconnect between the considerable resources mobilised for the response and what is actually reaching patients, frontline workers, and communities continues. Urgent action is needed to ensure available resources translate into effective, coordinated activities where they are needed most…

DRC Ebola outbreaks
Broader use of ERVEBO® vaccine could help protect people from Bundibugyo Ebola outbreak today
Press Release 10 Nov 2026
- The Bundibugyo Ebola virus outbreak in Democratic Republic of Congo continues to claim lives.
- While development of virus-specific vaccines is underway, people at risk should be given broader access to the ERVEBO® vaccine.
- Merck, global health authorities, and partners must ensure that vaccine allocations can enable a meaningful expansion of vaccination.

Health facility solarisation drive unlocks benefits for over 140 million people in underserved communities in Africa and Asia
Geneva, 11 November 2026 – An ambitious drive to solarize primary health care facilities, backed by an investment of more than US$30 million from Gavi, the Vaccine Alliance, is helping unlock benefits for more than 140 million people in underserved communities across Africa and Asia. By solarizing more than 1,700 facilities across Ethiopia, Nigeria, Pakistan, Uganda and Zambia, the initiative is helping address one of the most persistent barriers to equitable immunisation – unreliable access to electricity at frontline health facilities – while making long-term investments in health care service delivery…

Call for Curiosity-Driven Research Case Studies

Oct 21, 2026

The 2027 GRC Annual Meeting will focus on Curiosity-Driven Research (CDR) under the working theme of 'Making a Case for Curiosity-Driven Research'. The discussion will be structured around the following three dimensions outlined in the Discussion Paper:

- Understanding CDR and its role in research ecosystems
- Considering the role of public funders in relation to CDR
- Considering making the case for and communication of CDR

With these three dimensions, the Discussion Paper provides a comprehensive framework on the current state of CDR, highlighting key developments and their implications at various levels. This Call for Case Studies seeks to complement the discussion around CDR by bringing practical experiences and perspectives from GRC participating organisations and research systems in various regional contexts into the conversation…

Please submit your case study, images and organisation logos to the GRC Secretariat (grc@ukri.org) no later than 11 December 2026.

Measles Elimination Status: What It Is and How the U.S. Could Lose It
Nov 13, 2026 *Policy Watch*
This policy watch examines the United States' measles elimination status, including what it means to eliminate measles, whether the current measles outbreak could threaten the country's measles elimination status, and what losing that status might mean for measles control.

A Step Back for U.S. Public Health: The U.S. Is Likely to Lose Its Measles Elimination Status
Nov 13, 2026 *Quick Insights*
The loss of measles elimination status would primarily carry symbolic weight, as the effect of rising cases and deaths is already clear. Still, it is a marker of how a combination of factors - COVID-19, increasing vaccine skepticism, and a growing partisan divide about vaccines - has been a step back for public health, and it is not clear when or if this trend will be reversed.

Statement From Elizabeth Yee, Executive Vice President of Programs, on the Call to Action for Resilient School Meals
Statements Published Date November 11, 2026
The Rockefeller Foundation welcomes the global commitment made today at the Paris Peace Forum Child Summit to ensure every child has access to healthy, nutritious meals at school. We commend France, alongside the other co-chairs of the School Meals Coalition, Brazil, Finland, and Kenya, and the many countries that came together in Paris today. The Children First Declaration as well as the Call to Action for Resilient School Meals are important steps toward turning that commitment into lasting, country-led investment…

Climate and Health Funders Coalition Awards $225 Million in First Year To Accelerate Solutions That Will Improve Health and Save Lives
Press Releases
Antalya, Türkiye | November 9, 2026 — The Climate and Health Funders Coalition has awarded more than $225 million in its first year, putting three-quarters of the initial $300 million pledged towards accelerating solutions on extreme heat, air pollution, climate-sensitive infectious diseases and data systems that protect people's lives and livelihoods in a changing climate…

:: Journal Watch

The Sentinel will track key peer-reviewed journals which address a broad range of interests in human rights, humanitarian response, health and development. It is not intended to be exhaustive. We will add to those monitored below as we encounter relevant content and upon recommendation from readers. We selectively provide full text of abstracts and other content but note that successful access to some of the articles and other content may require subscription or other access arrangement unique to the publisher. Please suggest additional journals you feel warrant coverage.

Editors' Corner
This month in The Journal
Paul W. Hook, Alyson B. Barnes

Cross-phenotype associations can arise through pleiotropy, a process by which a single gene influences multiple traits. Vertical pleiotropy occurs when the genetic effect on one trait directly mediates the effect on another trait, whereas horizontal pleiotropy arises when the genetic effect indirectly mediates multiple traits through distinct biological mechanisms. Existing approaches for detecting both vertical and horizontal pleiotropy were largely developed for common variants and cannot determine whether shared gene-level rare variant burden association arises from concordant allelic effects or from distinct variants acting through different mechanisms.

In this issue, Lu et al. introduce ALLSPICE, a tool to identify heterogeneous effects of rare coding variants within pleiotropic genes that enables the distinction between horizontal and vertical pleiotropy. Application of ALLSPICE to rare variant summary statistics of hundreds of traits in the UK Biobank revealed that rare coding variants within the same gene can influence phenotypes in heterogeneous ways. ALLSPICE is computationally efficient and immediately applicable to existing rare variant association datasets.

Genetic data sharing by clinical laboratories in Canada: A position statement by the Canadian College of Medical Geneticists

Jordan Lerner-Ellis, et al.
Article summary
Clinical genetic data are increasingly central to diagnosis and treatment, yet Canadian laboratories lack practical guidance for sharing them responsibly. This CCMG position statement translates ethical, legal, and clinical principles into actionable recommendations for Canadian laboratories to share genetic data responsibly while supporting patient trust and advancing genomic medicine.

Anti-Trafficking Review
No. 26 (2026)
https://antitraffickingreview.org/index.php/atrjournal/issue/view/37
Anti-Trafficking Review is the first open access, peer reviewed journal dedicated to the issue of human trafficking. It explores trafficking in its broader context and intersections with gender, labour, and migration.
Special Issue - Corporate Accountability and Forced Labour in Value Chains
Guest Editor: Judy Fudge

This Special Issue of Anti-Trafficking Review examines recent efforts to hold multinational corporations accountable for human rights harms, including forced labour, resulting from their business practices. Contributions from across Asia, Europe, and the Americas analyse various aspects of the shift from voluntary corporate social responsibility measures to legally required or legally enforceable initiatives to address forced labour in global value chains. They interrogate the effectiveness of recently adopted transparency and human rights due diligence legislation across many Global North countries and demonstrate that worker-driven social responsibility, and other bottom-up initiatives, are better placed to reduce exploitation in supply chains than top-down state- and corporate-led approaches.

Climate change: Choices for displaced people
From rising sea levels threatening coastal populations to the intensifying frequency and severity of

natural hazards, the climate crisis is rendering homes uninhabitable and futures uncertain for millions – especially for those who have been least responsible for climate change. The contributions to this issue of FMR emphasise that responses to climate displacement must be proactive, rights-based, and human-centered, moving beyond reactive measures. Authors from five continents share from their unique perspectives to bring you a rich body of articles which we hope will inform and inspire, bringing fresh thinking and provoking debate.

Upholding Humanity in War
27 articles
This Review issue is organized around the seven workstreams of the ICRC's Global Initiative to Galvanize Political Commitment to International Humanitarian Law: "Prevention Good Practices", "National IHL Committees", "IHL and Peace", "Protection of Civilian Infrastructure", "Protection of Hospitals", "Information and Communication Technology" and "Naval Warfare". The interviews and articles in this issue provide a comprehensive overview of the current state of IHL - what is holding,

what is fraying and where the most urgent academic and political work is needed.

Rules for Robots
As robots increasingly become part of the urban landscape, local officials must ensure that they are integrated safely and efficiently. There are a lot of existing rules governing vehicles and devices in cities, but which ones should apply to robots and when should new rules be considered? The essays in the Summer 2026 Issues explore this and many other topics, including how community colleges are training the AI workforce, the future of the National Science Board, assessing the costs and benefits of clean air regulations, and how communities are learning to bargain with big tech companies over data centers.

The Lancet Commissions
A Lancet Commission on the Health and Poverty Alleviation Initiative in China
Wannian Liang…Margaret Chan, et al.
p2125-2168
Poverty alleviation is a pressing global challenge that is intricately linked with health, as emphasised by the Sustainable Development Goals (SDGs). In 2019, out-of-pocket health expenditure—health-care costs paid directly by individuals or households rather than covered by insurance or other third-party payers—pushed an additional 344 million people into poverty globally. In 2020, 724 million people were living in extreme poverty, defined as living on less than US$2·15 per person per day at 2017 purchasing power parity, 90 million more than the pre-COVID-19 pandemic UN projection. When prioritising economic development and growth, governments often overlook the intrinsic link between ill health and poverty, an oversight that is reflected in the poor integration of health into poverty-reduction strategies of low-income and middle-income countries

HIV service delivery after the PEPFAR and USAID HIV funding withdrawal in Uganda and Zimbabwe: an interrupted time-series study
Henry Cust, Sungai T Chabata, on behalf of Partners in Uganda and Zimbabwe
Summary
Background
In January 2025, the US Government froze foreign aid and halted the President's Emergency Plan for AIDS Relief (PEPFAR), the largest external funder of HIV services globally. Early modelling studies and rapid assessments warned of major harm to millions, but robust quantitative evidence from those who relied most on the lost funding has been absent. We aimed to estimate the effect of the US funding withdrawal on HIV prevention, pre-exposure prophylaxis (PrEP), testing, and treatment services provided

by non-governmental organisations (NGOs) serving primarily key populations in Uganda and Zimbabwe.
Methods
In this interrupted time-series study, we used monthly and quarterly service-delivery data from NGOs in Uganda and Zimbabwe from January 2023 up to March 2026. All received stop-work orders and subsequent funding cuts. Core service indicators across prevention, PrEP, treatment, and testing were normalised into domain indices, in which 100 represents their mean 2024 amount. The main outcome was the change in these service indicators because of funding cuts. Specifying February 2025 as the interruption point, we estimated effects with an unweighted panel interrupted time-series (the organisation level) and a client-weighted interrupted time-series (the key-population level) on these indices.
Findings
Eight organisations agreed to participate; four were subsequently excluded for reasons of data quality, lack of funding impact, and location, with four subsequently included in this study. All four service domains showed large, sustained declines. Across both the unweighted and weighted specifications, prevention fell by 36·8–62·7 index points, PrEP by 43·0–71·6, treatment by 22·0–31·5, and testing by 58·7–63·8 index points in February 2025 (index points are equivalent to percentage change from mean 2024 amounts). 95% CIs excluded zero for all estimates except PrEP in the unweighted panel. Services remained substantially below the 2024 amount up to March 2026. The antiretroviral therapy humanitarian waiver attenuated treatment effects but did not prevent substantial decline.
Interpretation
The sudden withdrawal of US funding was followed by severe, sustained disruptions to HIV service delivery in Uganda and Zimbabwe across all major domains, with the largest declines in prevention, PrEP, and testing services for key populations. These results are the first quantitative findings on service-volume changes in NGOs whose US funding was terminated or sharply cut and illustrate the effect on the NGO-led, key-population layer of HIV services in sub-Saharan Africa. These services are crucial to people living with HIV to remain healthy and have a good quality of life. Urgent investment in service-continuity protocols and domestic financing is needed to prevent a rebound in HIV incidence.
Funding
The Josiah Charles Trent Memorial Foundation Endowment Fund, the Sanford School of Public Policy, and Duke Global Publications Fund.

Perspective
Discovery as public infrastructure: Renewing the social contract for science
Sergio Carbajo and others
Scientific capacity built over generations is being weakened by abrupt political disruption just as discovery is becoming faster, more convergent, globally networked, and more socially consequential. Restoring funding and protecting scientific institutions are urgent, but not sufficient: the postwar compact that sustained discovery before its uses were known must be renewed for 21st-century conditions and made resilient to arbitrary disruption. We propose the Discovery Compact, a renewed social contract among government, science, industry, and the public that treats discovery as shared public infrastructure—capacity a plural society builds, tends, and holds in common across generations. It is organized around five criteria: (i) sustaining discovery as national infrastructure; (ii) enabling institutions to move at speed without sacrificing rigor; (iii) building scientific capacity through people, openness, and mobility; (iv) translating discovery without depleting its source; and (v) securing democratic legitimacy and institutional resilience. Together, these criteria direct policy toward durable scientific capacity and insulate against indiscriminate deregulation, compulsory commercialization, arbitrary institutional disruption, and political control of scientific judgment. This Perspective is not a legislative template but an invitation to a national and international process of protecting and renewing the institutions and infrastructure through which societies discover, generate, protect, and prepare.

World Heritage Review
n°110 - July 2026
https://whc.unesco.org/en/review
World Heritage
Across the world, heritage reminds us of how societies drew on their history to build the future. As both a legacy of the past and a resource for future generations, it embodies the resilience, creativity and spirit of transmission that enable communities to preserve their identity and adapt to the transformations of their time. This conviction, at the heart of UNESCO's mission, takes on particular resonance on the

occasion of the 48th session of the World Heritage Committee, held this year in the Republic of Korea.

The Korean experience vividly illustrates how heritage can accompany the transformations of a society while preserving the foundations of its identity. Over the decades, the country has succeeded in protecting and promoting its cultural and natural heritage while embracing innovation and international cooperation. Today, the Republic of Korea actively contributes to capacity building, knowledge sharing and the implementation of conservation projects benefiting many States Parties to the World Heritage Convention…

Public Consultation Opportunities

WMA - Declaration of Taipei Revision Launched *[Ongoing]*

...The Declaration of Taipei tries to achieve a balance between the rights of individuals giving their tissue or data for research and other purposes based on confidentiality and privacy rules while at the same time recognising that health data has become a very powerful tool for increasing knowledge.

In analysing the scenarios that already exist for the use (and misuse) of health data and biobanks, we came to the conclusion that the major risk scenarios may not result from science, but from the commercial, administrative or political use of such data. Limiting our guidelines to research only would have left us blind to the imminent risk of abuse from outside the field of medicine: commercialization, cost-cutting and potential political abuse.

Therefore, in contrast to the Declaration of Helsinki, this policy aims to address any use of health databases and biobanks excluding individual treatment and is not restricted to research. As physicians are the primary custodians of confidential health information, they feel an obligation towards their patients and other persons who entrust them with their data and specimens...

In April 2025, the WMA appointed a workgroup to initiate the revision process of this document. To encourage as much global participation in the revision process as possible, the WMA is collaborating with its members to host a series of regional meetings...
